on Active Duty from Coast to Coast

WORLD'S LARGEST FLEET

OF PHOSPHORUS TANK CARS!

Riding the "high-ball" westbound from Pocatello, Idaho to Newark, California and eastbound to Lawrence, Kansas and Carteret, New Jersey, nearly a hundred special GATX cars keep Westvaco phosphate plants steadily supplied with elemental Phosphorus. This unmatched inter-plant fleet of phosphorus tank cars is just one more reason for Westvaco's spectacular growth as a wholly-integrated phosphate producer.

First to tap immense new Western phosphate rock deposits, Westvaco has built a new-from-the-ground-up furnace at Pocatello every year for the past four years. Simultaneously, phosphate facilities have been built and expanded at three strategic locations coast to coast. Product lines have been widened, quality standards stepped up.

Whatever your needs for Sodium or Potassium Phosphates, Westvaco can supply the quantity, the quality, the packaging and the service you require. May we quote on a fair share of your purchases of any of the Westvaco Phosphates listed below?

Acid Sodium Pyrophosphate • Chlorinated Phosphate • Dipotassium Phosphate
Disodium Phosphate • Monopotassium Phosphate • Monosodium Phosphate
Phosphoric Acid 75% and 85% • Potassium Tripolyphosphate • Sodium Hexametaphosphate
Sodium Tripolyphosphate • Tetrapotassium Pyrophosphate • Tetrasodium Pyrophosphate
Tripotassium Phosphate • Trisodium Phosphate Anhydrous

the NINOL Alkylolamides

a unique series of nonionic surface active agents

"They THICKEN when they're THINNED"

An original development of NINOL LABORATORIES, this important series of nonionic detergents and emulsifiers comprises a group of amides derived from fatty acids and alkylolamines, with individual members ranging from water soluble liquids to insoluble waxes.
In addition to being excellent detergents and wetting agents, the NINOL alkylolamides (amine condensates) exhibit the following unusual properties:

VISCOSITY

Many of the NINOLS form viscous solutions which become even thicker as more water is added. This property is used to advantage in thickening *shampoos, water-based hydraulic fluids, latex systems, cleaners, and other products.*

RUSTPROOFING

Unlike most synthetic detergents, the NINOLS act as rust inhibitors in water due to their amine structure. In *metal processing* they are used as additives to cutting oil emulsions to prevent rusting of the work, and can also be added to the final rinse after cleaning.

FOAM

A wide range of foaming power includes low-foaming grinding aids for *resins* and high foaming *detergents for dishwashing.* Certain types also act as foam stabilizers for *sulfonated detergents.*

EMULSIFICATION

NINOLS are available for emulsifying materials ranging from *microcrystalline wax* and *essential oil* to *synthetic rubber* and *plasticizers.* Certain types are especially effective in forming water-in-oil emulsions.

•

Some interesting NON-SURFACTANT *uses of the NINOLS are as: plasticizers and anti-static agents for plastics; finishing agents for synthetic fibers; lubricants for chain belts; anti-gelling agents for liquid starch; opacifiers for cosmetics.*

Write us about your problem — the right NINOL may be the answer

OPINION . . . . .

What's Ahead for Business?

How's business? How do you think business will hold up next year? Those are the two questions executives are asking one another right now—and that, in itself, is neither unusual nor unnatural since the fourth quarter of every year is always an open season for predictors.

But this year, perhaps more than previously, a good many of the opinions are tinged with apprehension. Some business seers are, indeed, downright pessimistic. Their comments are solidly dismal and they hasten to summon all sorts of "reasons" to support their contentions: the armistice in Korea, farm income is slipping, automobiles are now easy to get, the steel industry is overbuilt. Their conclusion: business has just been too good for too long and "the bottom is bound to fall out."

It's been our observation, however, that regardless of how positively these gloom-peddlers make their assertions, most of them have picked up one stray incident—e.g., the dip in farm income or the lush trade-in a friend got on a new car—and they've ballooned its significance to ridiculous proportions. It's usually a case of deciding first that business will be poor and then uncovering a "fact" to bolster the argument. Seldom if ever do the melancholiacs bother to take a look at the rounded picture, to size up what really portends.

But that's what they should do—what we all should do. It is time, it seems to us, for us to calmly and soberly appraise the factors underlying business activity and to try, as well as we can, to determine what's ahead.

As every businessman knows, there are three top-importance factors that underlie business activity:

- Capital expenditures.
- Defense expenditures.
- Civilian expenditures.

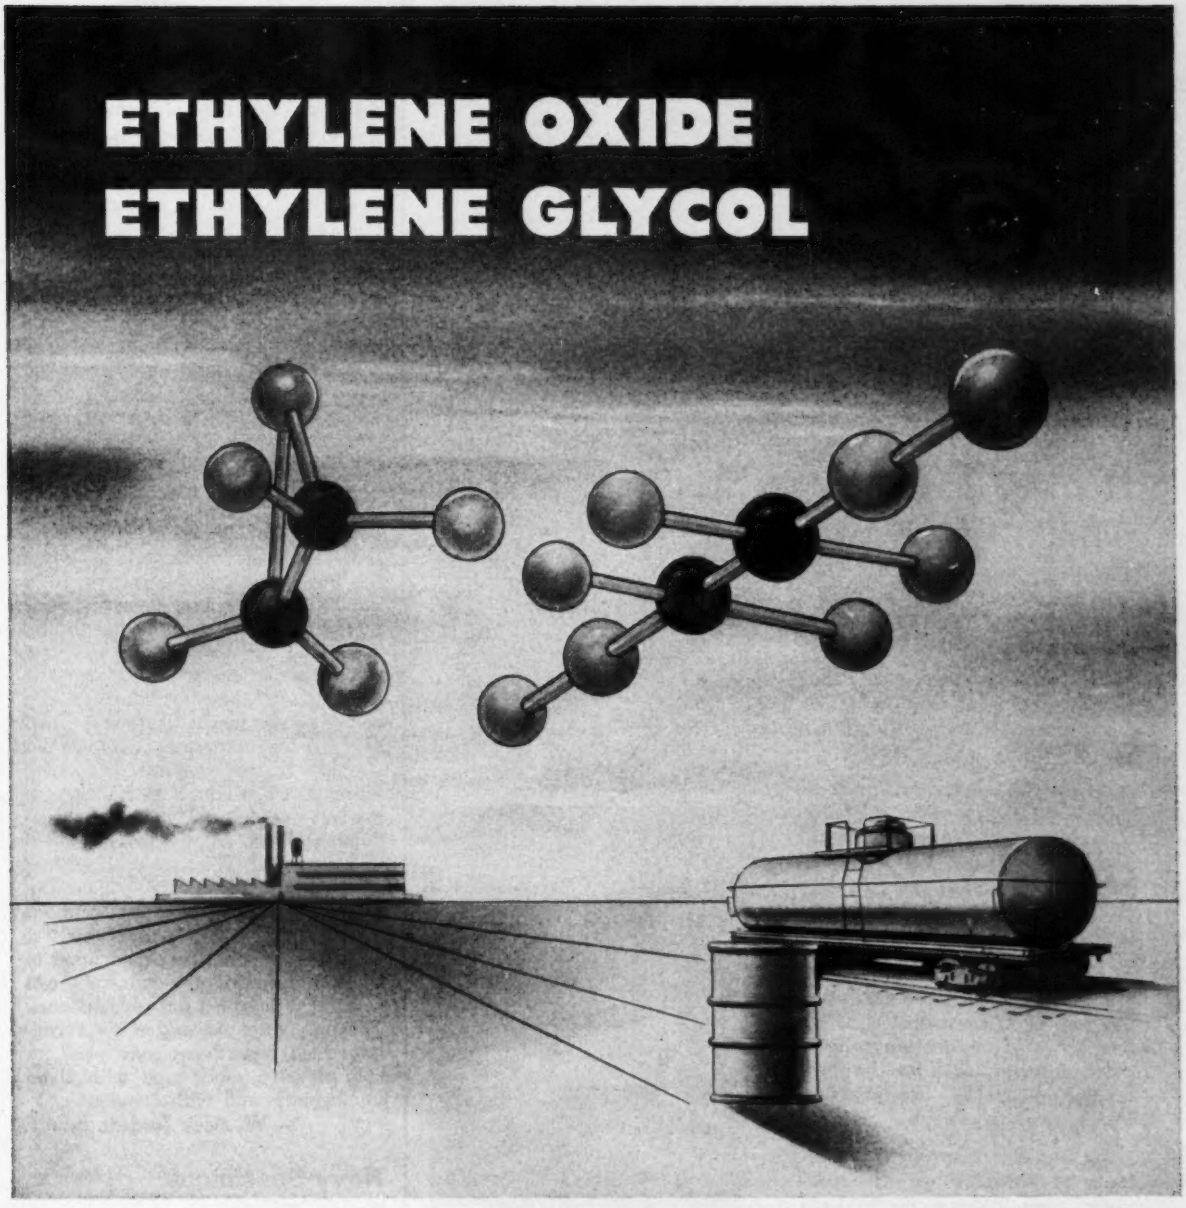
Here's where they stand today and where our economists think they will be by mid-1954:

Capital expenditures—or gross private domestic investment (including housing)—is now running at a rate of $52 billion/year. By mid-1954 it will probably dip to a rate of about $47 billion.

Defense expenditures are running at about $53.5 billion; by mid-year they will taper to some $50 billion. Both are declines but not sharp ones, percentagewise. Certainly they aren't in the "bottom-will-fall-out-of-business" category. In fact, should civilian spending remain near its present level, these cuts in expenditures would push the Federal Reserve Board's index down from its current (August) 238 level to about 215. And, incidentally, 1951 and 1952—far from being "bad" years—averaged 220.

Those two factors are easily predictable. The third (and a vital) key, civilian expenditures, isn't. Not that it isn't simple to tot up consumer savings to determine just how much money is available. But to predetermine what consumer psychology will be is something else again.

Perhaps you recall what happened early last year. Millions of people held off buying and put their money in the bank. That, at the time, was not a completely unhappy circumstance; it withheld some fuel from the fire of inflation. But, under other circumstances, it could wreak havoc. And that sort of havoc is what the gloomsters are inciting and inviting.



Economists have a neat term to describe this governed-by-consumer-psychology area of our vulnerability: optional consumption. The most stable society, they point out, is the most primitive one. Men plant seed, dig the potatoes as they mature, and eat them on the spot. In any economy in which people must scrabble and scrounge in the earth for those things they must have, there is no gap between supply and demand.

However, as a country grows richer, the supply-demand gap widens. Necessity is no longer the prime pressure. You may like a new automobile—but you don't need one; you may take a fancy to a couple of new suits—but you're warm enough as it is. There are, in fact, plenty of things you can get along quite well without—and without experiencing serious inconvenience. Today, with our economy as mature as it is, an estimated 30 to 40% of our national income can fall in this "optional consumption" bracket.

Obviously then, prosperity, or the degree of the recession we will experience, can be governed to an important extent by the drive that consumer industries put behind their selling efforts; but these efforts can be negated to a considerable measure by those who thoughtlessly purvey pessimism. They can warp the consumer mind, fill him with fears, throttle a substantial segment of business.

We—principally suppliers of raw materials to other industries—can do

ETHYLENE OXIDE
ETHYLENE GLYCOL

Available in tank cars and drums early in 1954. Ethylene Oxide and Ethylene Glycol are the two newest additions to the large and growing list of Nitrogen Division basic chemicals.

These two organic chemicals will be produced at the new Nitrogen Division plant at Orange, Texas, by a new and different process that assures high standards of product quality and exceptional purity.

The staff and facilities of the new Nitrogen Division Organic Development Center at Hopewell, Virginia, will furnish skilled technical assistance without charge or obligation. Inquiries are invited. Write now for full information including product data, price quotations and shipping points.

Expert Handling Of Every Process Filtration Job Offered By Eimco

Illustrated here are some of the various types of continuous vacuum and pressure filters designed and built by Eimco Engineers.

From the smallest pilot filter station to the largest full production plant size filter, Eimco makes all types. We are prepared to test your product and recommend the model best suited to do your job and work efficiently in your flow sheet.

If yours is a simple dewatering job or a complicated selective hot acid separation process there is an Eimco filter that will do the job better, cheaper and faster.

Let engineers, with the experience of Eimco design and operating men behind them, help solve your filtration problems. Write today.

OPINION . . . . . .

little to help them in selling their products. But as individuals, we can, at least, refrain from mouthing, unthinkingly, dire tales of business woes.

We are not, of course, advocating blind optimism. Rose-colored glasses should have no part in business or personal planning. It is time, in our opinion, for all of us to look at things realistically, to appraise the good and the promising and to scrutinize the perils and the problems that loom.

We will admit to some real concern about some of the expansions that have taken place in some of the more circumscribed industries. There is no gainsaying, either, that some chemical companies have plunged into segments of the business in which they have no basic position and no logical sales entree. Their trials will generate some disturbing news. However, there were dislocations when the business curve was on the way up; there's no reason to expect that there won't be others in the future.

But on the whole, we aren't concerned about the prospects for the chemical and process industries—and certainly not in the least concerned over the long-term outlook. Our great strength is that we are developing hosts of new products to exploit new markets—agricultural chemicals, medicinals, fibers, etc.

Nonetheless, there are problems we are going to have to face—without becoming panicky; there are cautions we shall have to observe, there is judgment we shall be called upon to exert. But few if any industries can look for a brighter future than ours. The only essential is that we recognize such hazards as may exist, or may develop, and cope with them intelligently—and with conviction.

—**W. Alec Jordan,** *Editor.*

Navy Specimens

TO THE EDITOR: . . . I am sorry to see that you overlooked a very important and significant piece of research in the brief picture-text item "Tissue in Technicolor".

. . . Although this item described the method of preserving biological specimens by imbedding them in acrylic plastics . . . it overlooked the significance of the specimens themselves. These were prepared in acrylic plastic as representative of successful bone grafts from the U. S. Naval Medical School's bone bank at Bethesda, Md., which had been prepared by freeze-drying. . . . They represent a considerable triumph for Captain Enyart, Dr. Strong, Dr. Hyatt, Dr. Turner and Dr. Bassett at Bethesda . . . who have been carrying on ex-

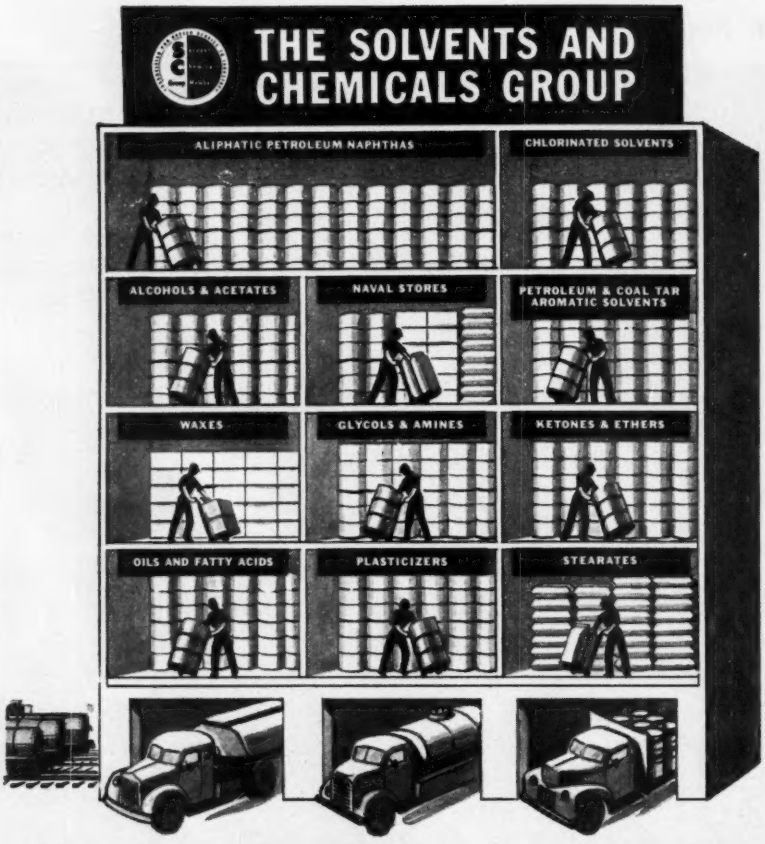
Dependable Source of Chemical Raw Materials

J. F. McCarty, president, Cold Spring Bleachery

"Wyandotte Technical Service saved us 18% annually," *says J. F. McCarty, Cold Spring Bleachery*

"We have been a Wyandotte Caustic Soda user for more than 40 years," states Mr. McCarty, president, Cold Spring Bleachery, Yardley, Pa. "During all this time, we have found the quality and uniformity of Wyandotte Caustic excellent . . . in fact, its quality is so consistent, we wouldn't take a chance on any other caustic!

"Another thing, Wyandotte Technical Service has been very co-operative and helpful. On their recommendation, we recently switched over to liquid caustic. Much to our amazement, we find that at current requirements this change has effected a savings of 18% annually in our costs for caustic. We are doubly pleased because the changeover has removed caustic handling hazards—a big safety factor.



"Naturally, the Wyandotte representative is always welcome at our plant, and we're proud to say Wyandotte chemicals play an important part in the services we perform for our customers in furnishing DELA-SET and DELA-SHRUNK finishes for fabrics."

Send for Wyandotte's helpful new 56-page book on Caustic Soda. It contains data on grades best suited for your requirements — whether for rayon, pulp and paper, soap and syndets, textiles, chemicals, oil and lubricants, paints, dyes, metals. It also gives complete data on manufacturing processes, purity, analytical methods, and contains tables and charts on chemical reactions. It's free for the asking! Write to *Wyandotte Chemicals Corporation, Wyandotte, Michigan. Offices in principal cities.*

"DEPARTMENT STORES"

for solvents and chemicals

Order what you need, when you need it, in the quantities you want . . . *all in one order.* That's the new "department store" system of distribution that's exclusively yours from the 15 service locations of the Solvents and Chemicals Group.

Need a tank truck of naphthas, 5 drums of chlorinated solvents, a mixed transport of alcohols and acetates? Just call . . . and you get delivery within 24 hours in most cases. What's more, in many instances, several products can be combined in one order to obtain lower prices. America's leading producers rely on members of the Solvents and Chemicals Group to distribute their highest-quality products.

You save on inventory, warehousing and insurance by letting Group Members supply your needs from local stocks. Investigate this convenient source of supply. Call your nearby Member in the cities listed below or write

NEW PATTERNS FOR PROFIT

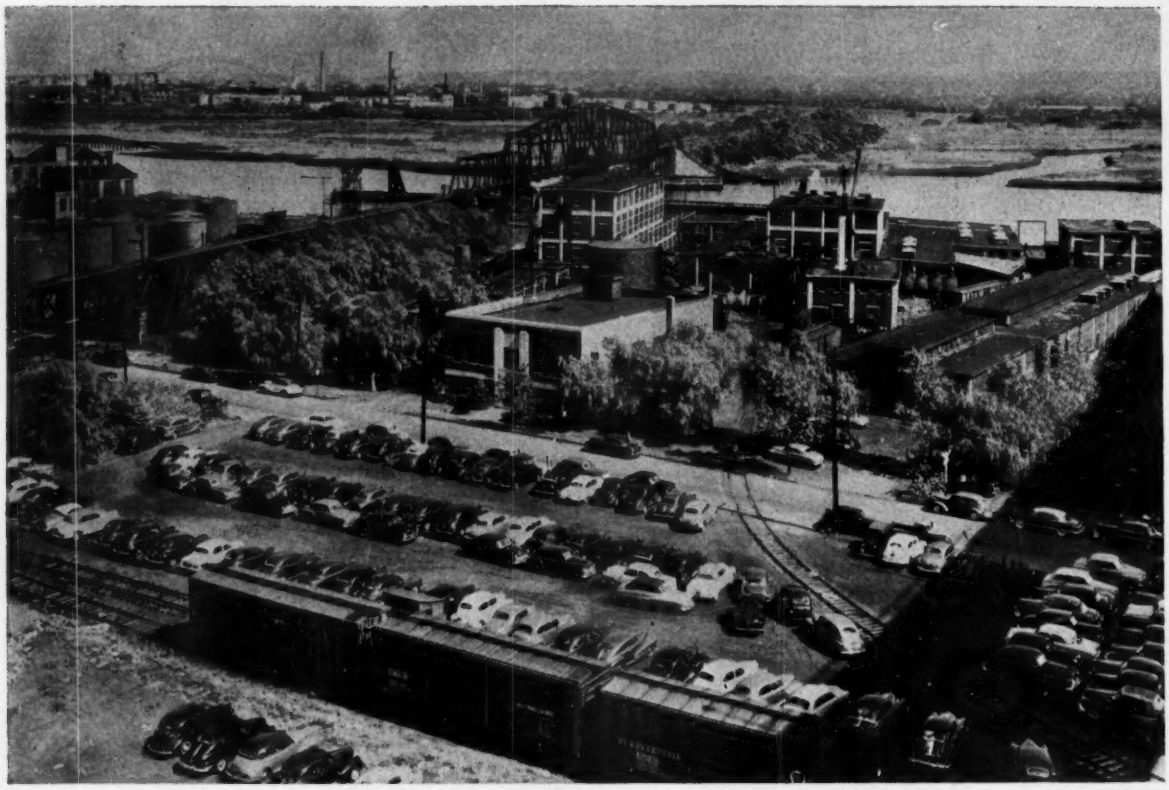
Will Construction of Shatterproof Greenhouses Add New Zip to the Building Boom?

Something new is ready for an old business: shatterproof plastic panels for commercial and private greenhouses.

The "clear" translucent panels transmit 80-90% as much light as pure air. They are weather-resistant and strong . . . will support 150-175 lbs. on 24" centers. Hail or baseballs just bounce off! The panels won't rot, boring insects and termites do not attack the material. And most important, greenhouse maintenance is cut to the vanishing point.

Greenhouse operators who "pioneered" with reinforced plastic greenhouses report surprising results: Because of *diffused* light, leaf burn is controllable; shade-loving and sun-loving plants grow well side-by-side.

Builders can tap a vast undeveloped "hobby" market.



Commercial greenhouse manufacturers can capitalize on the huge replacement market among commercial growers.

If you're in the building business (or if you'd like to build a greenhouse) send 25 cents in coin or stamps for the detailed, illustrated plan of the 16' x 24' greenhouse shown in the illustration. The speed and ease of construction will give you lots of ideas on how you can use these panels, PLUS a ready-to-use greenhouse plan. Except for four 2" steel pipe corner supports in 12" concrete footings, it is entirely aluminum and reinforced plastic. The greenhouse is expandable in any direction, reduces framing at least 25%, and requires no concrete or wood sills — because the reinforced plastic panels go right into the ground.

Monsanto is a major producer of **STYRENE MONOMER, MALEIC** and **PHTHALIC ANHYDRIDES** . . . basic chemicals used in the manufacture of polyester resins. Translucent building panels made of polyester resin and fibrous glass are just one of hundreds of products made of these materials. For more information on how polyester glass fiber laminates can be used in general manufacturing . . . write or call **MONSANTO CHEMICAL COMPANY, TEXAS DIVISION, TEXAS CITY, TEXAS.**

MONSANTO
CHEMICALS — PLASTICS

SERVING INDUSTRY . . . WHICH SERVES MANKIND

Exceptional Partial Facilities Available

If you are a Processor seeking complete or additional facilities in the Metropolitan New York area—Borne, Scrymser Company offers an exceptionally attractive proposition arranged to meet your specific requirements including (a) the use of part of an extensive modern plant and (b) manufacturing, shipping, and office facilities, if desired.

Ready for Immediate Use

1. **Office Facilities**
   Ample, light, airy space for executive and general offices. Clerical and Stenographic help available if desired.
2. **Laboratory Facilities**
   Complete with most modern equipment. Working space only, if desired.
3. **Modern Plant**
   Processing facilities for blending liquids, manufacturing all type greases; Cornell Blending Machine, mixing kettles. Capacity to fill 1000 drums per 8 hour shift. Sulphonate Refining Equipment; Oxidizing Equipment.
4. **Storage Facilities**
   (a) Tank field—1,000,000 gallon capacity. Extra space for additional tankage.
   (b) Indoor storage available.
5. **Warehouse Facilities**
   Spacious Warehouse facilities—indoor and outdoor—for liquids and solids.
6. **Railroad Facilities**
   Direct siding into plant with 3 spurs.
7. **Dock Facilities**
   Accommodate lighters and large barges. Arrangement for tank Steamers.

NEWSLETTER

A chemical market is in the making, but still up in the air is which of 13 chemicals will strike the bonanza.

Practical and economic methods of halting pollution from coal mine acid wastes are almost within reach, the Interstate Commission on the Potomac River Basin was told last week. Field tests now under way in an unused mine near Fairmont, W. Va., have confirmed laboratory results at Johns Hopkins University, where the commission's basic research was carried out. By year's end the commission hopes to know which of 13 promising chemicals will most cheaply and effectively stop acid formation.

Pilot tests in small areas (10 x 30 ft.) give promise that coal companies will be able to solve their problem by a simple spray or dusting —and savings on corrosion will more than pay the treatment cost. More surprising, it appears that the treatment will last six to eight years—maybe longer.

But there are tough problems to solve—even in treating active mines. And treating abandoned mines is still tougher.

•

The devastating fire that destroyed General Motors' transmission plant has hurried Sherwin-Williams' introduction of two new coatings that eliminate fire hazards of the type that caused GM's conflagration.

• One is a water-reducible high-gloss enamel that can be applied by dip or spray. While it is costlier than products requiring thinners, applied cost is no greater since it is thinned with water. The baked coating is as chemical-resistant, hard and adherent as conventional coatings.

• Another is a silicone-alkyd combination that is 75% more heat-resistant than nonsilicone enamels, but only half as costly as an all-silicone product. Nonyellowing at sustained temperatures over 500 F, it is expected to find use on heaters, roasters, and various industrial parts subject to high heat.

•

On the Washington scene, speculation was rife on the significance of Secretary of Labor Martin Durkin's abrupt resignation.

It's not of immediate significance to the chemical industry in particular, but his withdrawal from the Eisenhower cabinet is of long-range import to industry at large. Labor experts see a freezing, until his successor is named, of the current stalemate over Taft-Hartley amendments. And that successor, they reason, is likely to be more of a right-winger, and hence less prejudiced against the law as it now stands.

Such an appointment would foster agreement between the Administration and Congress on mild T-H amendments—like those advocated last winter by the bill's late co-author, Senator Taft. (Example: enlarging NLRB from five to seven members, thus affording more GOP representation.) Management's burden would by these changes be somewhat lightened, but the fact that a new Congress will be elected next year precludes any "get tough with labor" policy.

•

Of more immediate concern to chemical firms that engage in foreign trade is the October 8 deadline on suggestions or criticisms con-

cerning the custom simplifications bill, which the President signed on Aug. 8 and which became effective Sept. 7. Changes in customs regulations are ordinarily announced well enough in advance so that traders can present their views, but in this case time limitations made it necessary to issue new regulations without advance notice. Acting Commissioner of Customs David Strubinger, Treasury Dept., Washington, D.C., is the man who solicits industry's proposals and suggestions.

•

How exclusive is "nonexclusive?" That's the question Federal Judge Sylvester Ryan will have to answer in interpreting his decree (CW Newsletter, Aug 9, '52) in the Du Pont-Imperial Chemical Industries antitrust case, which stipulated that the defendants shall grant licenses "to any applicant making written request."

The question arises because a firm calling itself Nylon Spinners, Inc., set up in New York last April by two law partners, Lawrence Timen and Otis Mark Waters, applied for a license to make, use and sell nylon. Du Pont, however, says "there is strong reason to believe that Nylon Spinners does not have the necessary financial resources, . . . technical competence, and business experience in the field of chemical manufacturing," concludes that the two men "are either acting for undisclosed principals or intend to utilize any license . . . to the detriment of Du Pont's good name. . . ."

Du Pont asks that "any applicant" should mean "any qualified applicant," and Judge Ryan will hear its petition October 20.

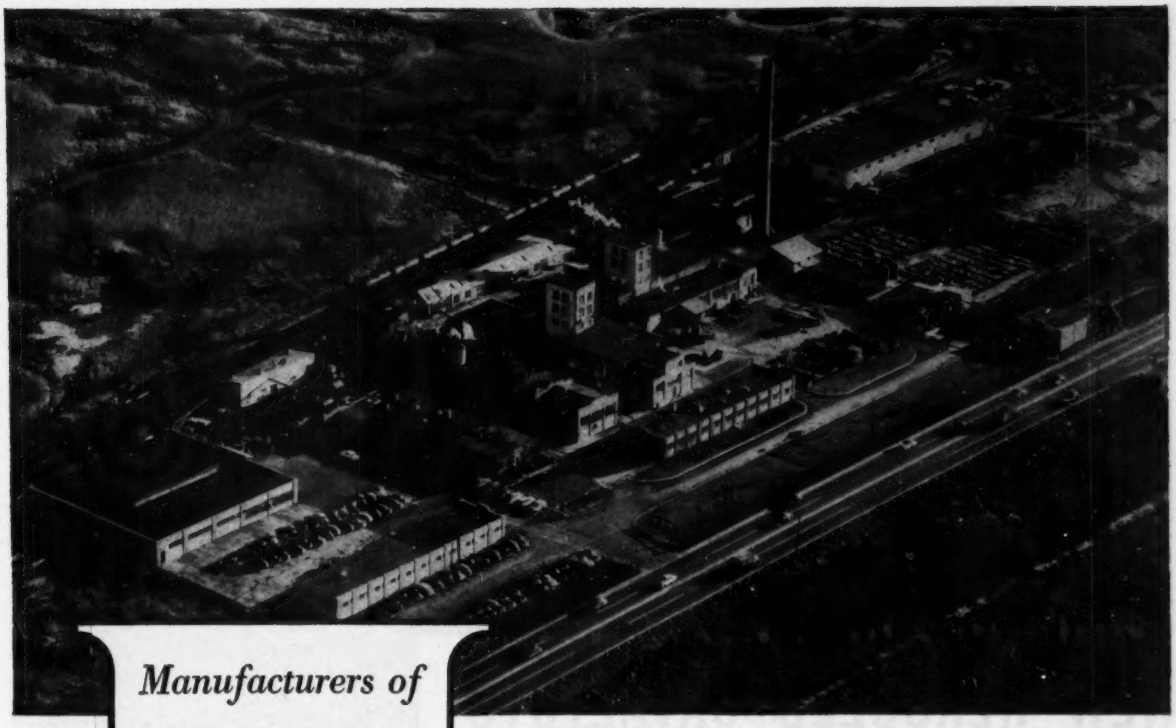
•

Another battle is being waged in the "Thirty Year's War" between Schwegmann Bros., New Orleans supermarketer, and such makers of price-fixed pharmaceuticals as Eli Lilly, Johnson & Johnson, etc.

John Schwegmann, Jr., recently asked the U. S. District Court to vacate Johnson & Johnson's injunction restraining the store from price-cutting, contending that other New Orleans stores cut prices and have not been haled into court. Johnson & Johnson's Pres. George Smith now challenges Schwegmann to name the stores, pledges investigation and court action if violations are uncovered.

•

Trends jut out in the news this week about two major firms, Monsanto and Dow:



• Monsanto is putting more emphasis on consumer products. It has set up an applications research department at Dayton to concentrate on household, home garden, and agricultural products. It will also work with research departments of various divisions to develop products for consumer sale. At the same time activities of the development department of the Merchandising Division were broadened. It will now develop new markets for soil conditioners, will also study market potentials and evaluate new products for consumer sale.

• Dow likes shipping by water (CW, July 18). It is now constructing a new wharf and warehouse at Freeport, Tex., specifically designed to handle dry cargo.

•

Latest pollution crackdown is in Toledo, O. The state's Water Pollution Control Board has ordered seven Toledo firms to get state permits for dumping wastes into county streams. This will put them under state control, which has a harder bite than local authority.

NEW HERCULES CATALYSTS OFFER GREATER ECONOMY, STABILITY, EASY HANDLING

Hercules cumene hydroperoxide is used by Alsynite Company of America as a catalyst in the production of high-quality translucent polyester fiber glass panels in their plants at San Diego, Calif., and Portsmouth, Ohio. Some applications of these panels, ranging from sectional sidewalls to roofs, are shown on this page.

As polymerization catalysts for various chemicals, Hercules hydroperoxides offer many advantages. For example, they are widely used in the rubber industry, where they provide faster polymerization, especially at low temperatures.

There are three Hercules hydroperoxides: Cumene (CHP), Para-Menthane (PMHP), and Diisopropyllenzene (DIBHP). They are stable during storage, and resistant to inhibition. Economically priced, and available in liquid form, these Hercules catalysts minimize material and handling costs.

Write for testing samples.

Pushing Away From the Table

Like a growing youngster who has finally eaten all he can of a big meal, many chemical producers are getting ready to push away from the table.

In the 33 months since the beginning of 1951, chemical executives have already added to their corporations expansion projects worth approximately $4 billion, according to the check totted up this week by the Dept. of Commerce and the Securities & Exchange Commission.

The totals indicate that the peak of tax-write-off-inspired chemical expansion is here. The record $1.8-billion expenditure for new plant and equipment this year (*chart*) represents a 24% jump over 1952. The increase is the second highest of any group, percentagewise, and second in dollar value among manufacturing industries (It follows only the petroleum-coal classification—oil predominant—which accounted for almost $2.8 billion in expansion.)

On a quarterly basis, company estimates for the last six months of this year are all-time highs. The July-September figure, $511 million, is the record, but the $466-million estimate for the following months is still second high. (In comparison, expenditures in 1952's final quarter were $410 million.)

Source Material: These figures are compiled every three months by the Dept. of Commerce's Office of Business Economics and the SEC, are based on reports of registered corporations to the SEC and OBE's surveys of corporate and nonincorporated business. The current totals reflect actual capital expenditures through the first half of the year and business estimates of spending for the following two quarters.

Each time data are collected, government statisticians recheck actual expenditures against previous estimates. For the first six months of this year, the projections were below the actual figures. Estimated chemical expenditures were $814 million; actual outlay was $822 million.

For the Future: Will the figures on spending for the last half of the year need some adjustment? Probably not. Government officials feel that plans through December have been firmed by the anticipated drop in tax rates.

Industry economists see a slight drop in capital spending as industry passes the write-off peak. But the drop they predict would merely reduce the over-all business activity to somewhere around the 1951-52 level—which should give little cause for worry (*page 2*).

For the gangling, still-growing chemical industry, any respite in capital spending should be little more than a pause for digestion.

Curtis W. McGraw

EVERYBODY who knows CHEMICAL WEEK has known Curtis McGraw, president and chairman of the board of McGraw-Hill Publishing Co. The enduring mark of his leadership in the task of keeping business well-informed, shaping the technical developments of industry, and holding the nation to an awareness of its power for greatness and goodness must remain on these pages. But it is something out of the lives of all of us that he died last week.

Born in 1895, Mr. McGraw was a graduate of Princeton (1919), chief McGraw-Hill executive since 1950. He was active in many business, civic, and philanthropic organizations.

Attentive but Wary

A group of chemical executives who lunched together last week had two matters to ruminate on. First was a dinner of melon, chicken with beans and au-gratin potatoes, ice cream and strawberry sauce. But much more important was a plea to change thinking on trade policies. Tossed to the tariff-conscious Synthetic Organic Chemical Manufacturers Assn., last week was the challenge to take the lead in helping establish a trade-and-tariff policy based first and foremost on national security considerations.

Arguing that such a policy would be to the advantage of much of the chemical industry, Henry H. Fowler, former Defense Production Administrator, called on SOCMA members to think about the problem "not in terms of what is good for the organic chemical industry but what is good for America." In many cases, he asserted, that approach would lead to increased trade with friendly nations as a means toward "the building of increasing cooperation and unity among free peoples of the world in their resistance to Soviet totalitarian conquest or Communist penetration."

Fowler, whose law firm serves as general counsel for the Manufacturing Chemists' Assn., showed no lack of awareness of the need for special protection for certain industries that make up the country's mobilization base. Further, he conceded that the synthetic organic chemical industry "has an important and substantive relationship to national security."

'Selectivity' Suggested: He acknowledged that national security is involved whenever tariff action "threatens to undermine the very existence of any key segment of industry," but called for perspicacity in deciding what business comes under that description.

In the event that such decisions are called for, "our determinations of the manufacturing processes that are to be classified for special protection," Fowler declared, "must be limited to a select category that does not preclude the broad flow of healthy trade with our allies."

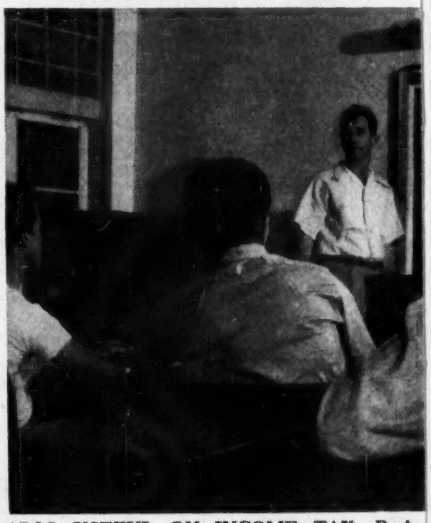
That "broad flow" might mean a $2-4 billion increase in imports, Fowler said, and granted that this would have "serious social and economic consequences." But, he contended, "these are consequences of the very type we constantly experience in the shifts in fortunes of various industries, types of workers and geographical areas in our internal competitive system of which we are so proud."

Industry's Stake: Fowler maintains that the organic chemical industry has a big stake in adoption of a selective approach to protection. "If the argument is used to call for blanket protection to large areas of industry because of the mere assertion of a general essentiality," he cautions, "the argument will prove too much and may not be accepted even for those segments to which it could be justifiably related."

He opposes the proposition that equates national self-sufficiency with national security, pointing to:

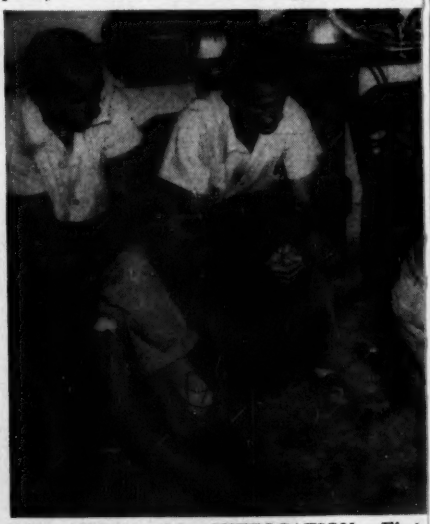
- The growing lag between our economic resources at home and our economic needs.
- The substantial difference between what the nation has in materials in peacetime and what it needs during total war.
- The excessive costs of national self-sufficiency to the taxpayer and consumer.
- The inadequacies of the protective tariff as an effective means of obtaining self-sufficiency.

That governmental administration of a "highly selective" tariff and trade program would be possible and practicable is Fowler's conclusion from last year's action by the Tariff Commission and an interdepartmental Watch Committee in the matter of watches and parts. Approach of those agencies, he says, was that import controls and customs duties should be such as to maintain a certain minimum level of production necessary to afford a nucleus for this type of precision work as a key element in the U.S. mobilization base.



SOCMA members, who had just heard their general counsel, Don Lincoln, report on tariff bills before the 83rd Congress with the warning that "the danger is not yet over," listened attentively to Fowler's reasoning but—apprehensive of those "economic consequences" he predicted—remained wary.

Indicative that the organization would not relax its vigilance on the tariff front were the words of SOCMA Pres. Cary Wagner in closing the meeting. Before announcing that the next SOCMA luncheon session will be Oct. 14 with Edmund M. Flaherty* as guest speaker, Wagner remarked that Fowler's speech showed that "we're going to have a real fight on our hands."



* Retired Du Pont official who later worked with ECA in allotting financial aid to European chemical companies.

APPRENTICE MEETS EQUIPMENT: While operators at Monsanto's Texas City plant learn

mathematics is handy tool for journeymen in chem rudiments from engineer doubling as math teacher.

aid is essential part of apprentice training; here, latest approved method of artificial respiration.

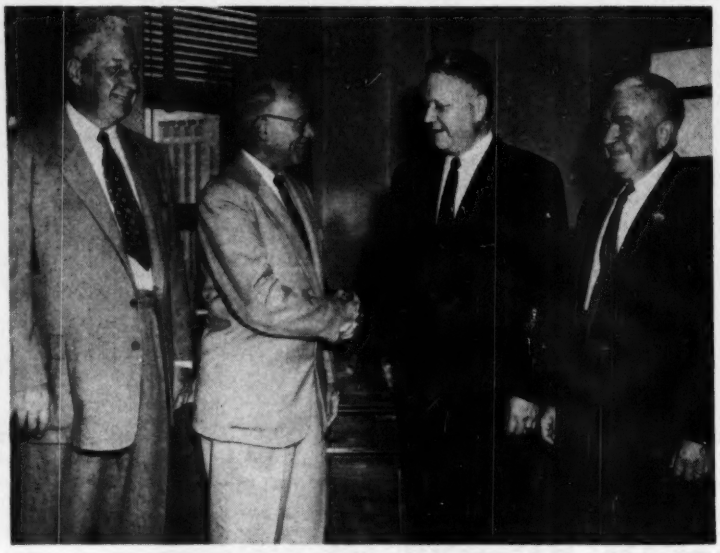
High Stakes in Skills

It's o.k. to wager most of a company's expansion money on mechanization to "win"; on management, engineering and sales talent to "place"; but there's also a lot of smart money on skilled craftsmanship to "show."

Even though the chemical industry has gained a reputation as a leader in adopting new equipment that makes production quicker and simpler, the industry still needs employees who know more than how to push buttons and collect pay checks.

In fact, the larger chemical companies appear to be increasing their investments in the training of skilled production and maintenance workers. Reasons:

- Costlier and more complicated equipment shouldn't be entrusted to people whose mechanical ability is limited to punching a time clock.
- Trained craftsmen can be expected to push output totals up and maintenance costs down, as compared with the performance of raw recruits "fresh from the farm." Also, skilled workers can prevent accidents and thus avoid shutdowns and reduce the company's payments for workmen's compensation.
- Well-planned apprentice training programs build loyalty to the company, encourage employees to be "career men," and start the more ambitious employees on the road toward promotion to foremen, supervisors and—in some cases—executives.



No 'Quickie' Plan: Apprentice training programs used by major chemical companies are serious business; they don't turn out "90-day wonders" or self-deluded "know-it-alls." Typical apprentice training periods run for four or five years, include some college-level instruction in technical subjects such as blueprint reading.

Biggest factor in making a journeyman out of a young apprentice is on-the-job training. In many cases, at least 8,000 hours must be devoted to this kind of training, with the apprentice doing actual shop work (for which, of course, he's paid) under the supervision of a man who has both craft knowledge and teaching ability.

For example, the apprentice training program specified in the labor contract between Carbide and Carbon Chemicals and the AFL Metal Trades Council at Texas City, Tex., requires this much on-the-job training for lads who want to become instrument repairmen: shop work (use of tools, nomenclature, assembly of parts, adjustments and repairs), 2,000 hours; flow, pressure, and temperature measurement, 1,000 hours; pneumatic instruments, 1,000 hours; process control, 1,000 hours; test equipment and instruments, 250 hours; control problems, 250 hours; installation work and blueprint reading, 500 hours; electrical work, 2,000 hours.

Theory Included: In addition, every apprentice is required to attend, for 144 hours each year, class-room lessons and lectures in subjects related to their particular trades. Instructors for these classes are Carbide veterans who have been given a 50-hour vocational teaching course by Texas A&M College; they're registered with the State Department of Education, and the state contributes part of their salaries.

American Potash & Chemical at

Early Start, Still Working

ALLIED CHEMICAL & Dye Corp. will on Sept. 23 honor a salesman with 50 years' service . . . and he's still in the company's employ. Charles Berton (*second from left*) began working for Solvay as an office boy in 1903 at the age of 13, has been on the payroll ever since. Solvay's Pres. Chadwick offers congratulations.

Trona, Calif., has two apprenticeship programs, one in partnership with the International Assn. of Machinists (AFL) and one with District 50, United Mine Workers. Both require that each apprentice enroll in and attend night classes for not less than 144 hours/year in "related technical and general subjects," but, unlike the Carbide plan, this schooling is included in the 8,000-hour total.

A shorter, more specialized training course is one adopted in 1951 by Monsanto when it saw that expansion of its Texas City plant would call for hiring many new chemical operators. Monsanto set up a 120-hour, three-week course that breaks down like this: orientation, 16 hours; first aid, 10 hours; fire fighting and safety, 20 hours; operating fundamentals (including basic chemistry and physics as well as running of equipment), 74 hours. This has been given to all of the 250 operators added to the plant's payroll since then.

Extra Rewards: For the employee, the apprentice training program can have various compensations. For one thing, some programs provide for regular pay increases during the apprenticeship period.* Sometimes the program qualifies under the so-called "G.I. Bill of Rights" so that service veterans can receive Veterans Administration checks while they're taking the training. Certificates are awarded to men who complete the programs, and in some cases the graduates also receive school parchments; for example, graduates at Du Pont's Chambers Works get certificates from International Correspondence Schools. Of course, the principal reward is attainment of the rank of journeyman, which is next best thing to guaranteed employment, wherever one goes.

What's the percentage of apprentices dropping out of such programs? At the Chambers Works, where apprentice training began in 1921, 265 persons enrolled; 152 have been graduated; 18 are in military service; and 34 are still in training. In some plants, the apprentice is required to sign an agreement to complete the course.

So far, apprentice training has been limited pretty much to large companies, but at last month's North American Conference on Apprenticeship at San Diego, Calif., delegates endorsed a plan whereby small shops and factories could jointly undertake such programs.

That conference, made up of both management and labor representatives, also agreed that there should be no reduction in training time; delegates contended that the industry is demanding ever more advanced skills of the journeyman. Said J. A. Olmer, training supervisor for Boeing Airplane Co.:

"The line between the skilled craftsman and the engineer is becoming thinner all the time."

* At one plant, hourly wages during apprenticeship under current labor contract are $1.60 during first year, then $1.70, next $1.80, and finally $1.94 during the fourth year.

COMPANIES . . . .

The forthcoming sale of 50,000 shares of H. I. Thompson Fiber Glass Co. by members of the Thompson family is being made to create a market for the stock for inheritance tax purposes. Present principal product: a silica fiber glass batt used for high-temperature insulation in jet aircraft. The company is reported, however, to be considering entry into the field of heat-resistant plastics.

•

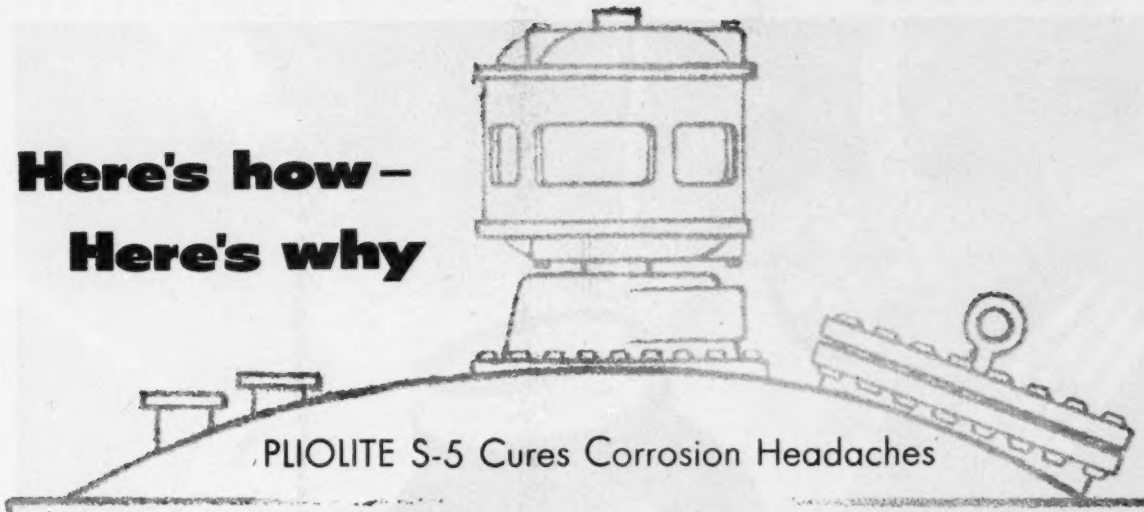
W. R. Grace & Co. is inviting holders of common stock in Davison Chemical Corp. to submit tenders for the purchase by Grace of up to 180,000 shares of Davison common stock at $40/share. Grace officials point to the proposed investment as a further step in company diversification into the chemical field, say that when the deal is completed it will own a majority of Davison common stock outstanding. Present holdings: 29% of Davison common.

•

Spencer Chemical Co. has awarded its contract for design services on a unit to prepare high-purity ethylene at Orange, Tex., to the Scientific Design Company, Inc., New York.

EXPANSION . . . .

Benzene Hexachloride: A unit to produce benzene hexachloride is being included in Pennsylvania Salt Manufacturing Co.'s recently opened chlorine-caustic soda plant at Calvert City, Ky. Cost: an additional $2 million, boosting the total outlay to $10 million. Construction is now under way; production is expected early next year.



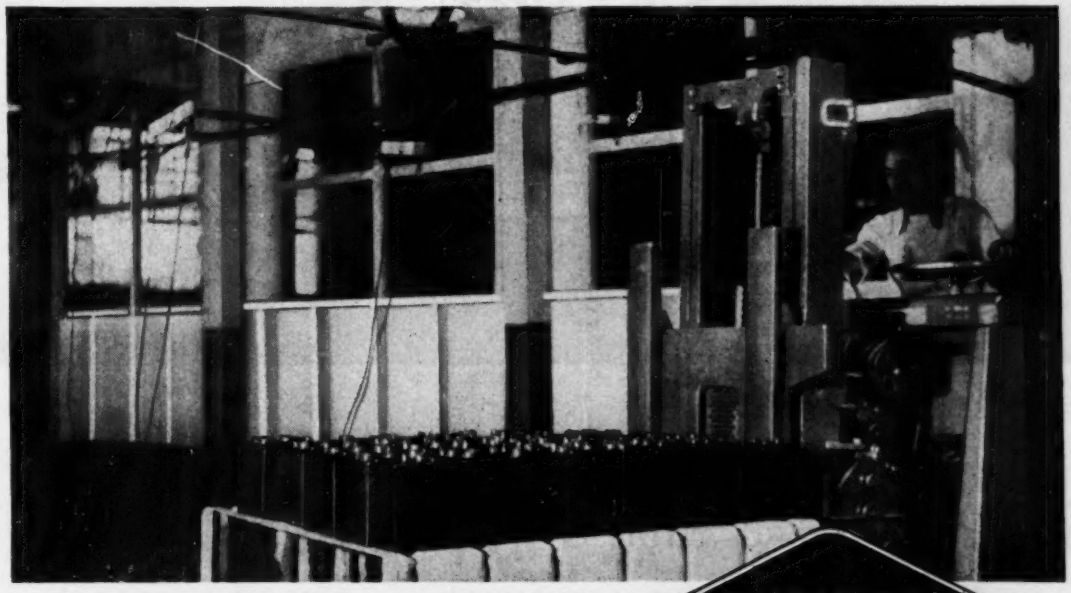
•

Atomic Materials: Some 1,000 employees of Dow Chemical Co. have started operations at the Rocky Flat atomic plant northwest of Denver. Construction work is due for completion the last of September at a cost of over $43 million.

There is widespread speculation that the plant will process raw materials used in making the atomic bomb, but officials say operations are secret and will not confirm the rumor.

Peak employment will be 1,200 workers, all employed by Dow.

Here's how—
Here's why



PLIOLITE S-5 Cures Corrosion Headaches

Headaches in many a plant stem from the high costs of maintenance, repair or replacement of machinery and equipment damaged by corrosion. The best way to cure these headaches is to stop them before they start. One of the best ways to do that is to use paints made with PLIOLITE S-5.

PLIOLITE S-5 is a styrene-butadiene copolymer. It is so polymerized as to combine the needed chemical resistance with the solubility and other properties demanded of a paint resin. Paints based on it are easily made and easily used. They are fast drying and nonoxidizing. They form a tough, durable film that fully resists acids, alkalies, oils, greases and water.

Protect your plant with paints based on PLIOLITE S-5. Ask your usual paint supplier about them. Or if interested in manufacturing them, write to:

Trilemma Unhorned

A fight that might have had serious effects on future electrochemical expansion in the Pacific Northwest seems about to be settled. And the terms are apparently agreeable to each of the three parties involved.

The scrabble came over a proposed contract between the Bonneville Power Administration and private electric utilities in the Northwest area. Terms of the original contract brought bitter complaints from industrial users of power, who felt that they were being discriminated against (*CW, July 4*).

During the fight, the phrases "creeping socialism," "big power grab," "national sell-out," "monopoly," were flying thick and fast, completely hiding the crux of the matter: there just isn't enough power now available to permit additional large-scale electrochemical expansion. Thus, various users have jockeyed for what little increments do become available.

One of the provisions of the present 5-year contract between Washington and Oregon private utilities and BPA stipulates that BPA can sell new power only to firms tabbed as defense industries. Industry, as a consequence, has turned to the Public Utility District, municipal utilities and electric co-ops for its power—paying a slightly higher rate and not always getting power where it wants it.

Pennsalt, for example, wished to expand its Portland plant, but had to expand its Tacoma plant instead when it could get power in the Tacoma area but not in the Portland area. Industry feels this is an artificial and unrealistic situation, since eventually all power comes from the same system. (All the PUDs buy power from BPA.) So industry isn't happy

New Contract: The present negotiations for a long-term contract started in March of this year. A draft was drawn up between the private utilities and BPA, which then submitted it to its industrial customers for review and comment. The ensuing yell of outrage was heard 'round the country.

The contract as originally written would extend present pacts for 20 years, with power allocated 5 years at a time, revision permitted only if there were "slippage" in construction schedules. Basis of industry's objections was that under the contract as drawn, BPA would be prohibited from selling to industry any surplus power on a firm contract unless all private utilities buying from BPA gave their consent.

Industrial expansion would necessarily have to be based on interruptible power in limited and indefinite amounts. Furthermore, the private utilities would get first crack at essentially the first 4 million kw. of prime power produced during the next 20 years over the kilowatts produced to meet the requirements of public agencies and existing industrial contracts. Finally, if BPA were unable to supply the private utilities, existing contracts with industry would be canceled unless industry agreed to take a proportionate share of steam-generated (higher-cost) power.

Industry Arguments: But the pressure built up by industry (backed by its $500-million investment in the area) proved too much for the private utilities. A revised draft was put in the works. The draft was submitted by BPA to the private utilities last week. If the utilities give their tentative approval, the contract will again be submitted to industry for review and comment, then to Washington for final review. It is not expected that the contract will be signed before the first of October.

The new draft reportedly cuts the kilowatts reserved for the private utilities after public requirements have been met to 1.5 million kw., with the added provision that after 500,000 have been sold to the private utilities, BPA could sell 70,000 kw. of prime power to firm up interruptible loads or bring in new industry. Furthermore, the clause canceling present industrial contracts has been eliminated. And there will be no review by the private utilities of industry-BPA contracts.

In the first draft the public agencies were limited to 10,000 kw. of BPA power, which they could sell to any new industry. This section was in obvious violation of the original Bonneville Project Act, so it was eliminated. Now BPA has promised to discourage PUD or other public agency sale of BPA power to new industries.

Short and Long: But a 20-year contract is only a short-term stop gap. The only real long-term solution is more and more and more storage and generating capacity to develop the vast untapped hydro-electric potential of the Columbia River system.

Can private industry do it better than the federal government, when the private interests have to pay higher interest on their bonds, taxes on their profits, and have to amortize their investment in 35 years rather than 50 years? Most experts doubt it; the contract now under negotiation might well be the first step toward an honest partnership between public and private power interests.

WHAT'S YOUR FILTRATION TARGET?

CAN YOUR PRODUCTS BE IMPROVED BY ACRYLIC MONOMERS?

Lower Prices for Rohm & Haas Acrylates and Methacrylates Encourage Wider Use

Reduced prices recently were announced for Rohm & Haas ethyl acrylate and methyl acrylate. This followed a sharp reduction some months ago in the price of methyl methacrylate. In the light of these lower prices you will find it will pay to take another look at the acrylates and methacrylates as a means of improving *your* products.

Widening fields of usefulness for acrylic monomers already embrace many products. These include synthetic fibers; transparent cast plastic sheets; molding powders; chewing gum; heat-resistant synthetic rubber; oil additives; industrial fume-resistant finishes and other protective coatings; a diversity of emulsion applications such as emulsion paints, shoe and textile finishes, rug backings, and paper coatings; and chemical intermediates.

Only Rohm & Haas makes both acrylates and methacrylates . . . a wide choice of monomers to meet your specific needs. For full information write Department SP.

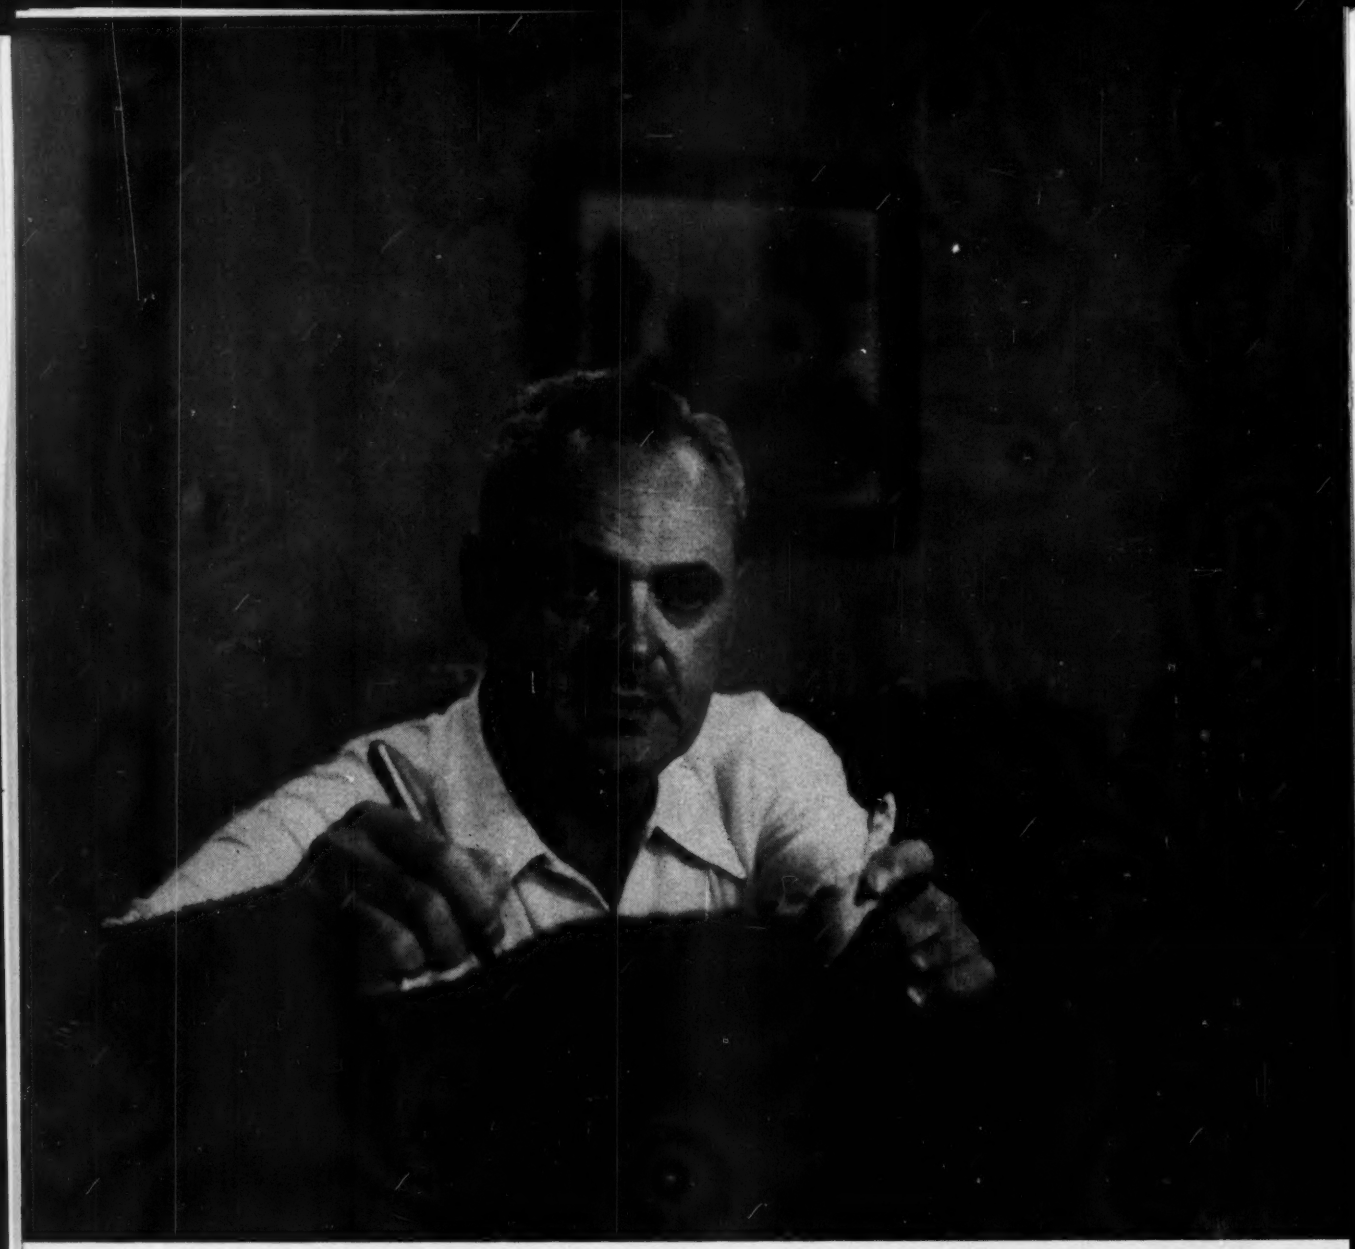
You will Dump High Costs, too..

. . . when you install the Dempster-Dumpster System of Bulk Materials Handling



Manufacturers over the nation have learned to eliminate the costly and inefficient method of handling bulk materials with conventional dump trucks, drivers and loading crews. You can equip one truck with a hydraulically operated Dempster-Dumpster. Then, inside or outside buildings at convenient accumulation points, you simply place detachable Dempster-Dumpster Containers, in capacities up to 4 times that of conventional dump truck bodies, with each designed to suit the materials to be handled—be they solids, liquids or dust . . . hot or cold . . . bulky, light or heavy. Containers shown at left, all handled by one Dempster-Dumpster, are only a few of the many available or that can be built to meet your needs. The Dempster-Dumpster, operated by only one man, the driver, serves scores of containers . . . one after another, as shown below.

You eliminate trucks standing idle. You eliminate re-handling of materials. You eliminate loading crews. You increase efficiency, sanitation and good plantkeeping with this Dempster-Dumpster System—the lowest cost method of bulk materials handling ever devised. Write to us for complete information. Manufactured exclusively by Dempster Brothers, Inc.

THE DEMPSTER DUMPSTER® SYSTEM

DEMPSTER BROTHERS, 293 Dempster Bldg., Knoxville 17, Tenn.

You don't uncover and build new markets by working eight-hour days. Ask Cheslam's Dick Whitehill.

Starting from Scratch . . .

YOU'RE A MARKETS MAN, and the boss does the improbable. He calls you in, and asks you to describe your idea of a job in Heaven.

You say: Well, a fellow gives me a product that has never been made before. He tells me no one knows enough about its uses to guess at its potential. It's to be my product. I'm my own boss. I've got time to snoop around, to think, to talk to people. He promises, "We'll back you with lab help, with production. Get yourself a crew, show 'em how it's done." I tell the boss to start producing, brother, because I'll find him those markets, make the sales.

Then the boss does the impossible: He says that job is yours.

That's roughly what recently happened to Richard "Dick" Whitehill, general manager of Cheslam Corp. (Yonkers, N.Y.), whom CW's camera follows this week on his dream job.

Cheslam is a division set up by polyethylene tubing producer Chester Packaging Products to handle the marketing of its polyethylene-cellophane film—a laminate made without use of adhesives *(CW, July 18)*. And Dick Whitehill, whose experience encompasses all phases of packaging, is the man Chester Pres. Alfred Schechter picked as the core around which the new division will grow.

The product, tradenamed Cellothene, is not the only one of its kind, but the whole field is so new that launching it is pretty much a pioneering operation. Combining the advantages of both cellophane (transparency, gloss, printability) and polyethylene (durability, low moisture transmission, flexibility at low temperatures, etc.), the material aims to fill the gap be-

PHOTOS—CARTER JONES

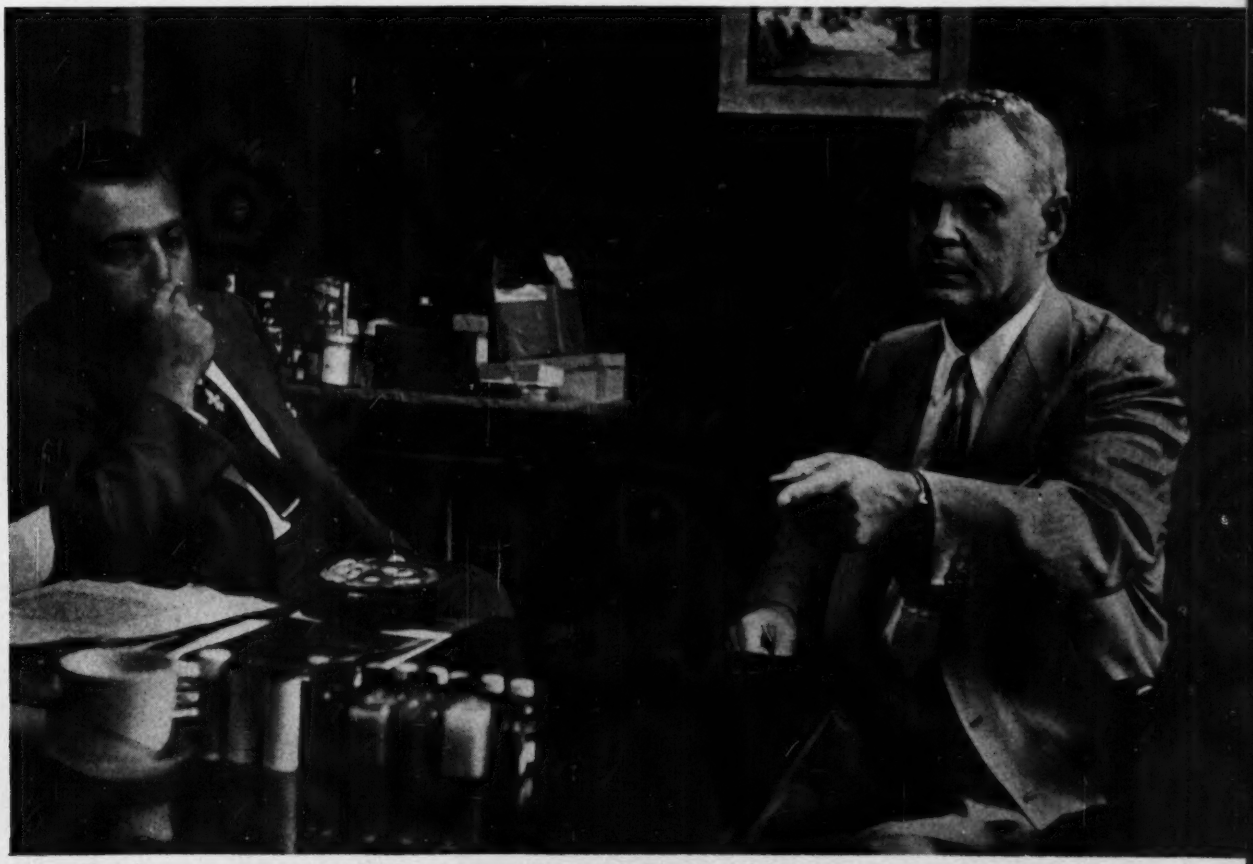
tween the two in packaging and other fields. Where these gaps are is Whitehill's job to discover.

It's first of all a matter of self-education, for there's no fund of information on the laminate as yet. That means exploring all industries that might be able to use it—food, household specialties, cosmetics, textiles, shoes, etc.

Since one man can only do so much, for Whitehill it means training others to do the same thing, and to follow up on leads he has uncovered. He not only must conduct this missionary work among eventual industrial consumers of converted film, but he must also explain the properties of the material to the converters who will turn the film into printed packages for their customers.

Packaging and converting machine manufacturers have to be consulted to determine whether existing machines will operate with the new laminate, or to find out what modifications must be made to make them work satisfactorily.

Each new application must be explored. That involves arranging for filling, making storage and other tests, getting the plant to turn out laminates with component films of different thicknesses to find the best combination for the job.

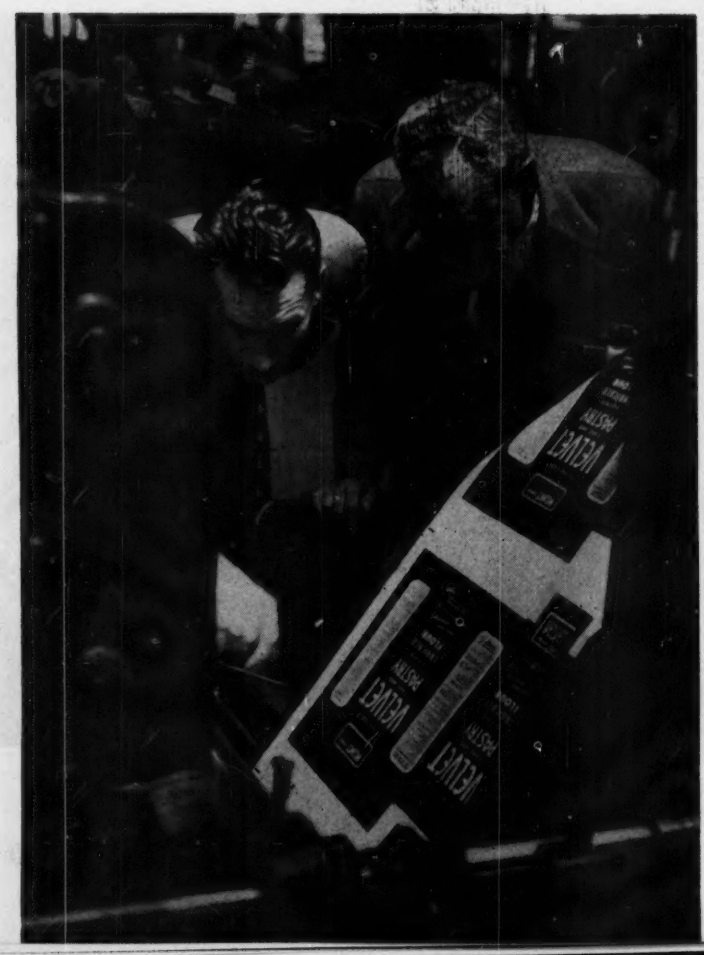


Whitehill conducts short training session on new film for salesman Kugelman (center) and paper firm representative.

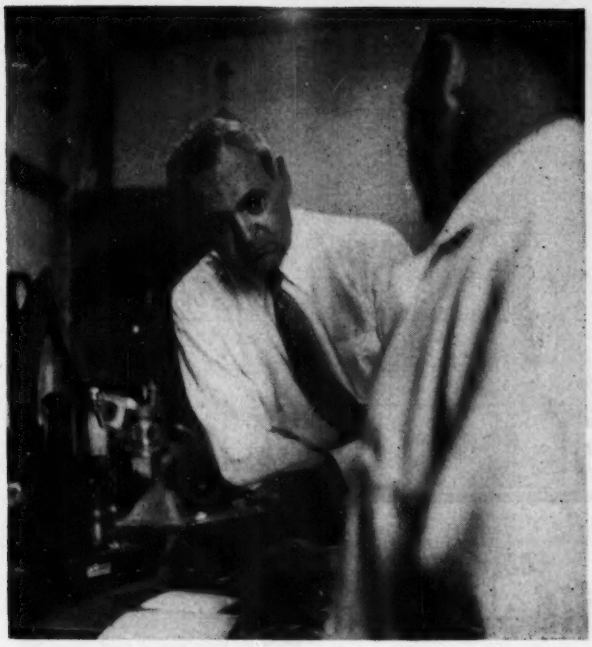
To do all these things, Whitehill is practically in constant motion. His office routine includes mail, short training sessions. Then he's off to a machinery manufacturer to see whether a new application he has uncovered is possible.

He then wheels his new Buick up to Chester's Yonkers, N.Y., plant, discusses some tests with the lab force, has a short conference with company officials before shoving off again. There follows a stop at a plant in New Jersey before he hops a plane for the Midwest to see another potential user.

Obviously most of Dick Whitehill's days are of the 16-hour variety. But there are no nights and days in Heaven.

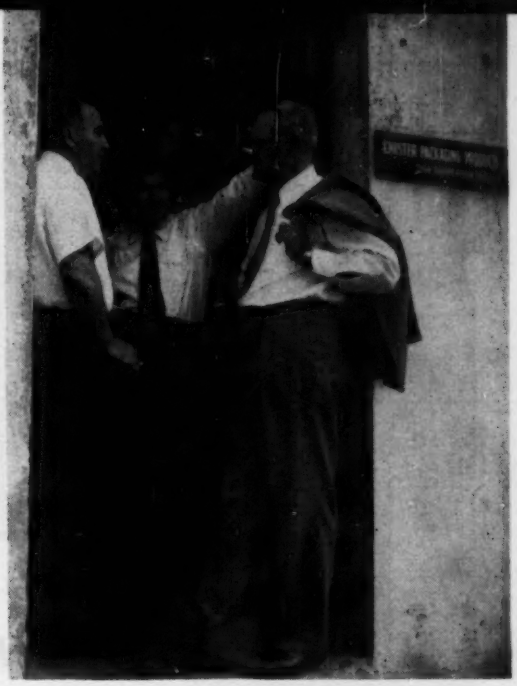


Steve Kugelman accompanies the boss to meeting with Claude D'Angio of Airkem (maker of Air-Wick). D'Angio explains package needed for new product, agrees to test the new laminate.

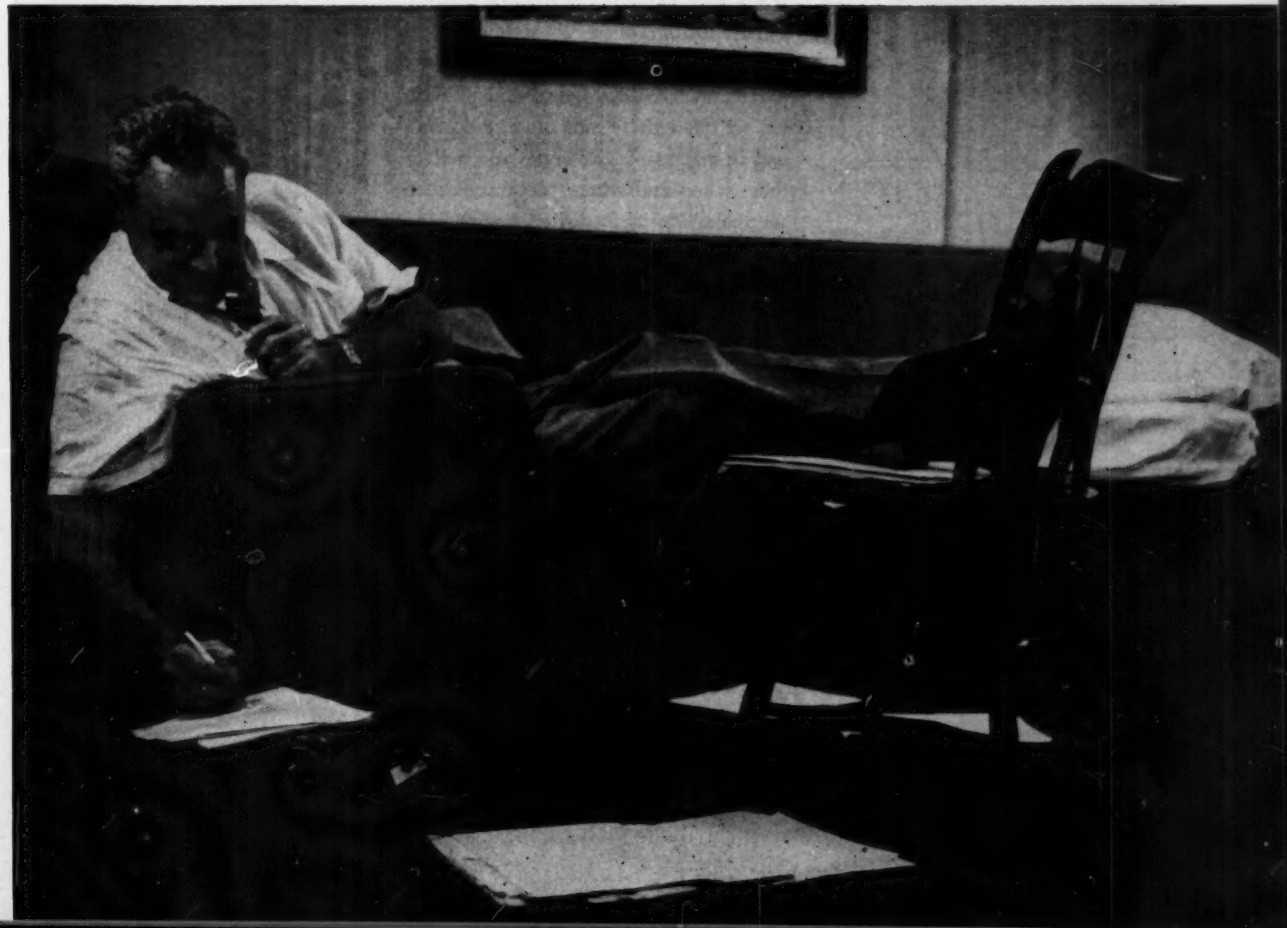


Mechanic at Roto Bag Machine (New York) and Whitehill examine bag made of the new film, determine what adjustments are needed.

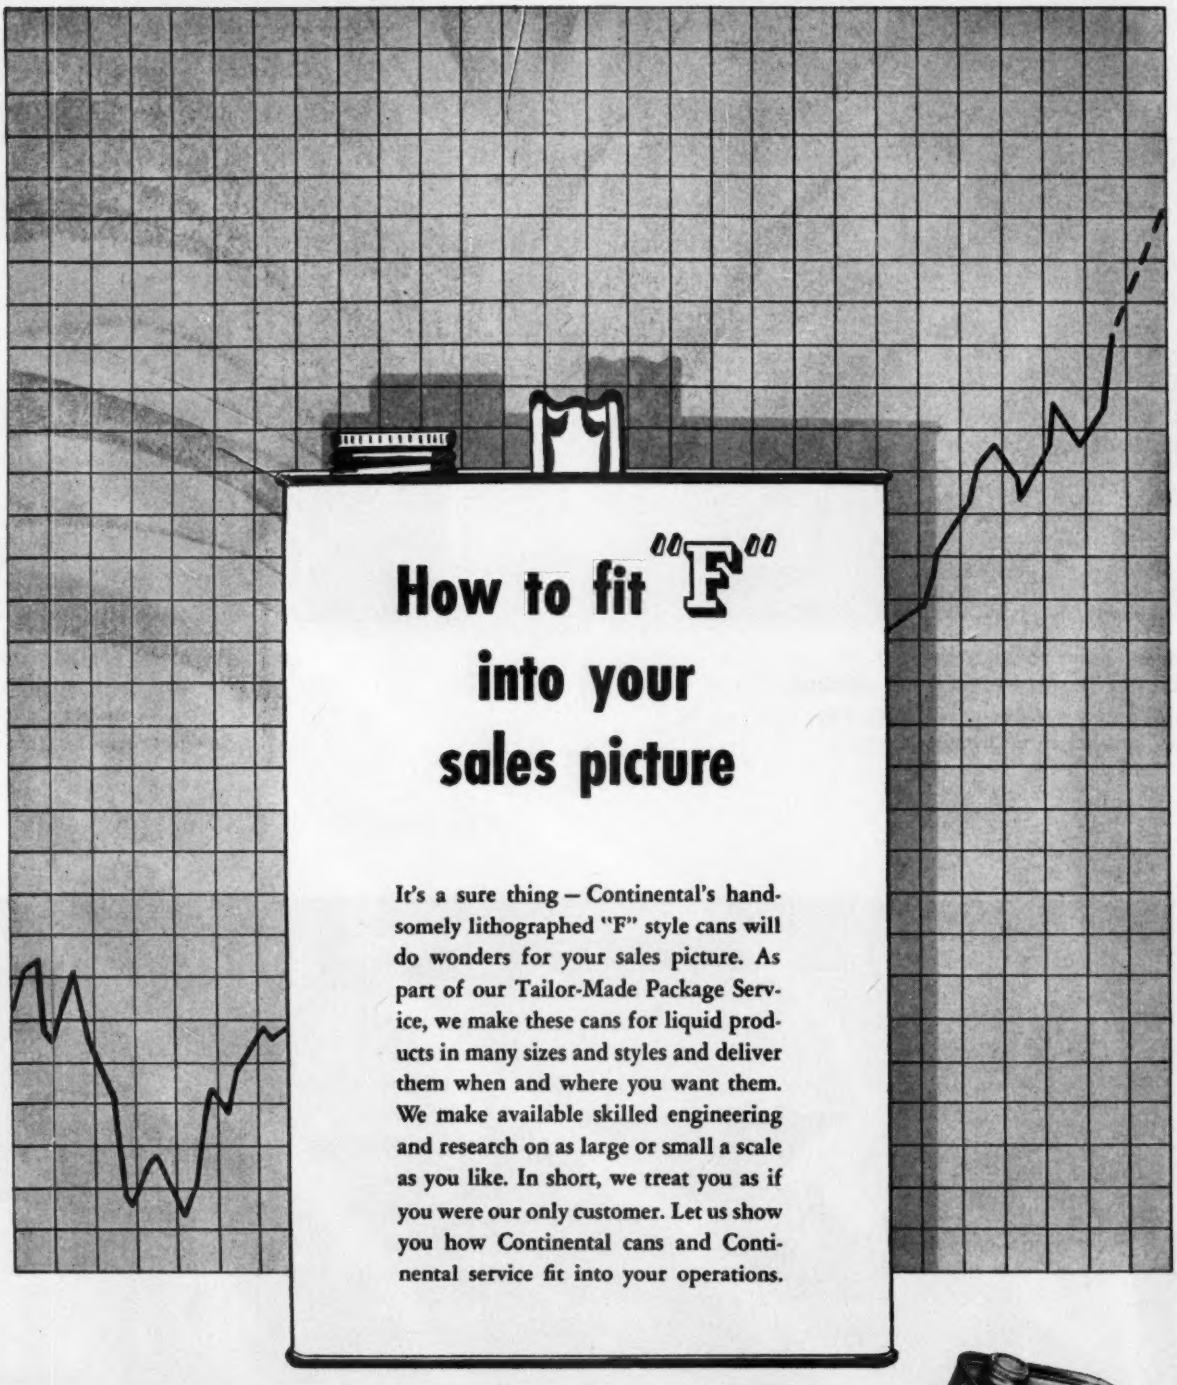
. . . Finding New Markets



Next, a fast trip to Brooklyn. Potdevin Machine's Jim Hamilton describes machine being built.



But though he has left plant and Yonkers behind, work goes with him. That's part of launching something new.



After the Brooklyn trek, Whitehill gets report from chemist in company lab in Yonkers, sets up several new projects.

At close of long meeting, he has final word with company officers Schechter and Feigenson.

How to fit "F" into your sales picture

It's a sure thing – Continental's handsomely lithographed "F" style cans will do wonders for your sales picture. As part of our Tailor-Made Package Service, we make these cans for liquid products in many sizes and styles and deliver them when and where you want them. We make available skilled engineering and research on as large or small a scale as you like. In short, we treat you as if you were our only customer. Let us show you how Continental cans and Continental service fit into your operations.

Industrial organics	27.5
Plastics	60.3
Synthetic rubber	233.3
Paints, allied products	217.1
Gum, wood chemicals	2.2
Animal oils	2.9
Miscellaneous chemicals	46.4
Total	598.8

Totals estimated on basis of 7.7 million total motor vehicle production. Included are chemical sales to auto-makers, plus a proportionate figure on chemicals used in making tires, tubes, other rubber goods, and storage batteries sold to auto-makers. Basic data from 1947 Census of Manufactures.

Hoopla and the Hard Sell

In Detroit this week, auto-makers were readying the hoopla and razzle-dazzle that punctuates their production cycle each year—the introduction of new models. This year, almost for the first time since the end of World War II, there was a minor-key theme behind the new-model promomotion: a period of hard selling is ahead.

The question asked not only in Detroit but also in virtually every top-level business conference: Can automobile production continue at its present high rate?

To executives in the chemical process fields, the question means more than over-all business activity. Granted that chemical sales depend on the general business activity level, which, in turn, depends to quite an extent on automobile and related industries —but in addition, they are sensitive to the much more direct effect of automobile production on chemical consumption. This year, which will see auto-makers turn out about 7.7 million cars and trucks, will also see sale of approximately $600 million's worth of chemicals and allied products to the auto industry and to such direct suppliers as the makers of storage batteries and tires.

These figures do not reflect indirect chemical consumption through sales of gasoline and lubricating oil (with their chemical additives), antifreeze, replacement storage batteries and tires, or via auto-makers' purchases of materials, which, like textiles, are dependent on chemicals. Hence the dollar estimates (*table*) are bare minimums.

As Autos Go . . .: Small wonder that automobile production bulks so weighty in the chemical business outlook, and that one often hears this question: Will a downturn in auto production mean a proportional drop in chemical consumption?

An answer takes shape from already discernible trends. By any standard, 1953 will be a record. The industry's estimated 7.7-million-unit production will be the second highest ever recorded. (Top year was 1950, when 8 million cars and trucks were produced; the post-World War II market was still unsated, and the impact of Korea and mobilization still lay ahead.)

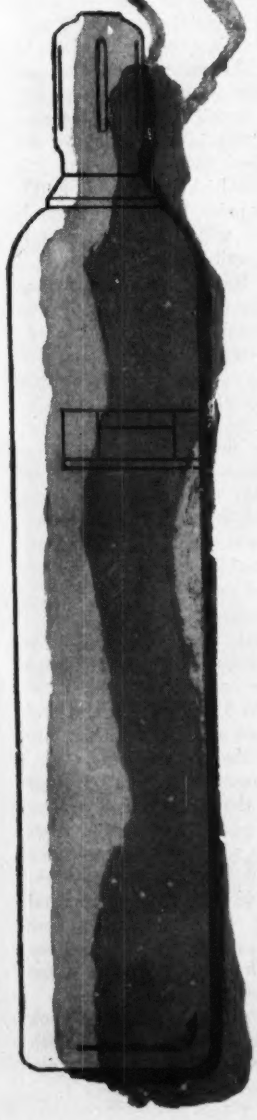
This year's production, in turn, reflects the order backlog from 1951 and 1952, when output was limited by government edict, but the same will not be true in the coming year. The backlog is gone, and auto-makers are looking forward to competive selling. (Said one auto sales manager to his New York dealers last week: "The biggest job ahead is to make the public buy the items it needs for comfort and convenience. This can be done by bringing out better and more desirable products, increasing advertising and promotion, and, in general, intensifying all sales efforts.")

Recognition by auto-makers of future sales problems has brought a fear of overproduction to observers away from Detroit. They wonder whether competition among auto-makers will engender a too-high rate of production as soon as new models are introduced. This could end in a sudden back-up of new cars in dealers hands, could mean idle plants and unemployment.

This worry is probably closest to the surface in Washington, where automobile production has always been a favored economic indicator. Such sensitivity may reflect more than a bureaucratic concern that auto-makers don't know their business. While the condition of Detroit doesn't always reflect the economic state of the nation, it is a considerable factor.

Units Go Down: Disinterested forecasters, while hedging their estimates *vis à vis* world conditions, predict that car and truck production next year won't total much over 6 million units. Such a dip of 1.7 million units would seem more than just the "readjustment" Detroit predicts. It will not, however, bring a comparable drop in dollar sales. The reason is the increasing acceptance of optional equipment. Buyers are considering such accessories as automatic transmissions, direction finders, power steering, air conditioning—which can add $400-$1,000 to car price. With such a trend, dollar volume will become more important than unit figures.

Chemical Boom: This trend has brought a nice new set of profit items to chemical makers. The rapid adoption of automatic transmissions, for example, has given a considerable boost to sales of hydraulic fluids. In addition, while auto researchers feel that present fluids are good, they would welcome oils with, say, increased density with no increase in viscosity. Such an oil, twice as heavy as present ones, would allow transmission of double power with no increase in fluid volume.



The development of a water-based industrial finish (*page 68*) points to to the possibility of a major change in automotive coating procedures. At present, 3½ to 5 gallons of paint and primer and two gallons of thinner are used to paint the average car.

But where research may bring major upheavals to the markets enjoyed by automotive suppliers, there is another general factor with equal importance —the psychological, keeping-up-with-the-Joneses one. If auto-makers find sales lagging, they can, in a few months time, make styling changes radical enough to make today's autos outwardly obsolete.

Such thoughts might easily be back of a good part of the optimism with which auto-makers view the approaching days of the hard sell.

Yankee Hustle Below Border

Though Mexico today still lacks a well-rounded chemical industry, migrating American industrialists in recent months have injected a fresh energy.

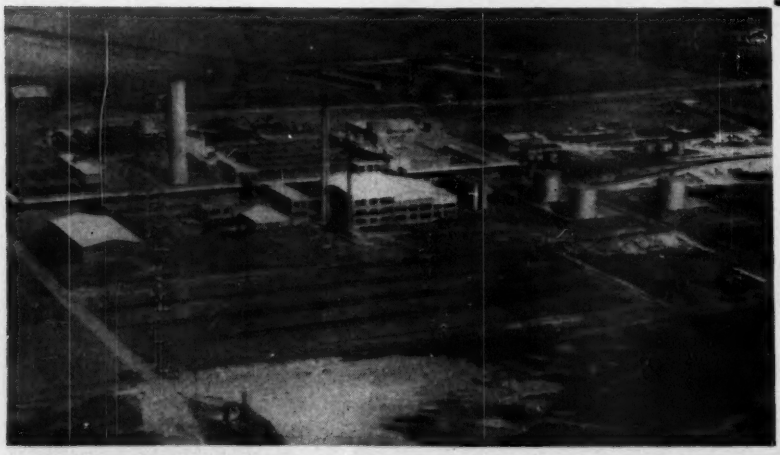
No single sector of chemical production is yet free of imports, but pharmaceuticals and sulfur are growing at a fast pace, should stand alone soon.

Mexico, chemical-conscious after a double shot of American bustle and postwar expropriations, today has ambitious plans for a full-fledged industry. Scores of new processing plants have been built and put in service in the past year; many producers of basic raw materials, too, have plunged into fresh operational ventures.

Actively encouraging the spurt, the Mexican government has not only spurred progress by granting requests for strong tariff protection, but in a number of important cases (such as sulfur recovery in the oil fields, production of commercial fertilizers) has kicked into the business with investments running into the tens of millions of dollars.

The government has still another active interest: its seized ex-German pharmaceutical and chemical interests are still being run under a combined operation called Quimica Nacional, which reportedly has varied schemes under way to start production on other new products.

Tax exemptions have recently cleared the path for manufacture of chlorine, insecticides, bleaching agents, and anti-malarial products. But economic difficulties still have to be hurdled, since in some cases Mexican consumption is still small; moreover, export duties are heavy.



Nobody Knows Officially: It's practically impossible to secure government statistics on just how the Mexican chemical industry shapes up today. There are no official, complete, or recent figures; and the industry itself offers little more. An industrial survey was started in 1945, was revamped in 1950 on a more ambitious scale; but neither attempts to compile any significant figures on products or types of products taken as a whole.

Best source of reference is the Mexican secretary of economy's office, which now lists 198 firms manufacturing industrial chemical products in Mexico, records an additional 323 plants turning out pharmaceuticals. The catch is that many major producers aren't included—usually because their chemicals are by-products, and according to Mexican cataloging thus belong under another manufacturing category.

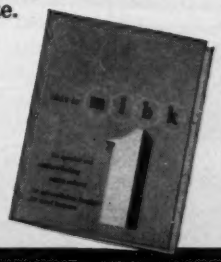
The roster of plants built in Mexico just in the past few years includes such names as Monsanto, Procter & Gamble, Pittsburgh Plate Glass, Colgate, Minnesota Mining, Du Pont, Celanese, Bakelite, Mexican Gulf Sulphur, Lederle, Abbott, Bristol-Myers, Merck, Parke Davis, Smith Kline & French and many others.

For raw materials used by the chemical industry, Mexico is fairly well set. Salt is obtainable throughout most of the country; soda ash is readily available from Lake Texcoco, outside Mexico City; large lead and zinc mines produce by-products in smelting; major oil fields, sporting three new refineries, have barely been tapped; sulfur recovery and lubricant plants are abundant; coal supplies are adequate; new sulfur deposits have just been discovered in southern as well as central Mexico, near San Luis Potosi. Further, sugar cane processing provides alcohol in large amounts; citric acid can be obtained from local supplies. The main lack—phosphate—must be imported from the U.S.

Since 1950 (when 540 plants, with an investment of over $40 million turned out $37 million of products) best estimates concede that more than $25 million has been poured into the

VISCOSA MEXICANA: Under Celanese tutelage, 24 million lbs. of rayon.

MIBK



The No. 1 medium-boiling solvent for nitrocellulose lacquers . . . for vinyl lacquers

For over-all performance and economy in lacquer formulation there is no substitute for methyl isobutyl ketone, because only MIBK has the solvent characteristics which permit formulating at top diluent content or top solids concentration.

And you need not tie up your bulk storage with extra solvents. Standardize on MIBK . . . the superior medium-boiling solvent for both nitrocellulose and vinyl lacquers.

MIBK is one of Shell's *quality* solvents which include among others MEK, MIBC, and IPA. Your Shell Chemical representative will be happy to discuss with you in detail the advantages to be gained from using MIBK in your lacquer formulations. Just phone or write.

drugs are flooding Mexico today.

Mexican chemical industry. Biggest chunks: a $10-million government-sponsored ammonium sulfate plant; a $4.5-million sulfur operation on the southern Gulf Coast; plastic, detergent and glass factories set up by U.S. firms.

Mainstays of Mexico's 1952 production list: sulfuric acid, calcium carbide, sodium sulfate, zinc oxide, pigments, copper salts, crude benzol, lead acetate, silver nitrate, sulfur, caustic soda.

But There Are Highlights: In any run-down of the Mexican chemical industry, certain companies stand out as leading the race. CW's recent survey takes special note of:

• American Smelting and Refining Co., with extensive properties throughout the country including lead and copper mines, as well as an arsenic plant turning out some 800 tons of arsenic/month, 50 tons sulfuric acid/day. At Rosita, in northern Mexico, American Smelting's mining and coking operations employ over 10,000 persons, boast the world's largest zinc smelter (with 7,200 retorts), and turns out as an additional premium some 1,300 tons sulfuric acid/month. Other products: ammonium sulfate, crude benzol, creosote—all side operations of its coke ovens.

• Guanos and Fertilizers Co., started in 1942 by the Mexican governmental financing agency, Nacional Finaciera, to process guano from islands in the Pacific. It's latest score: a $10-million ammonium sulfate plant, finished in 1951, now processing 66,200 tons ammonium sulfate annually. For a source of raw material, Guanos gets natural gas from the Mexican government's oil monopoly.

Two other Mexican plants are in the superphosphate race on a more modest scale, turn out together an additional 8,000 tons annually for the badly impoverished Mexican agriculture.

• Cia Mexicana de Explosivos, a Du Pont subsidiary, which turns out dynamite, TNT, fuses for the Mexican mining industry. Located at Dinamita, Durango, the firm produces 4 million lbs. of explosives monthly, makes its own nitroglycerine.

• Syntex S.A., reportedly the world's largest producer of synthetic hormones, which really switched into high gear late in 1951. Most of its products are sold in the U.S., are made from an inedible yam, found in the Central American jungle, called the cabeza de negro. Main products: progesterone, testosterone. It's also now synthesizing cortisone, say company officials.

• Petroleos Mexicanos, the government oil monopoly, which has recently added three new refineries, a lubricants plant, a sulfur recovery unit. Output from the sulfur recovery plant is now almost 120 tons of sulfur, 4,000 barrels of liquid hydrocarbon daily.

• Gulf Sulphur de Mexico, which is still in the process of building a $6.7-million sulfur extraction plant near Jaltipan in the State of Vera Cruz on the Mexican Gulf (*CW, Jan. 3*). Using the Frasch system, Gulf Sulphur's estimated production of 300,000 tons of sulfur a year, added to present Mexican output, should make Mexico the world's second largest sulfur producer by 1955.

• Soso Texcoco, which supplies quantities of soda ash, caustic soda, calcium chloride, potassium salts from the dried-up lake bed of Lake Texcoco, outside Mexico City (*CW, Sept. 12*). Quality is not what some customers would like, but daily production of some 100 tons of soda ash are eaten up by the soap industry.

• Beick Felix, a German firm, which stands today as a principal producer of sulfuric acid as well as a wide range of pharmaceuticals.

• Monsanto, which opened just last year to manufacture polystyrene, just added a vinyl plastics unit a few weeks ago. Basic materials are still being shipped from the U.S., but Mexican

DOW

METHOCEL MAKES MANY GOOD PRODUCTS BETTER

Superior filming and thickening characteristics of this synthetic gum by DOW prove valuable to industry

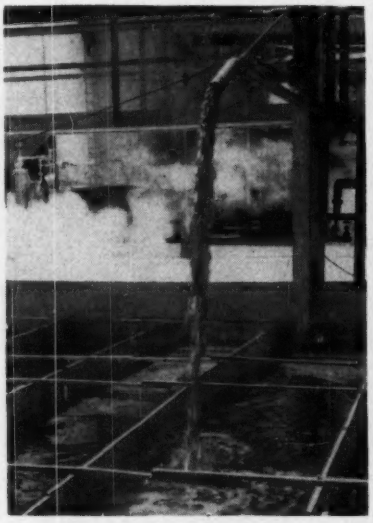
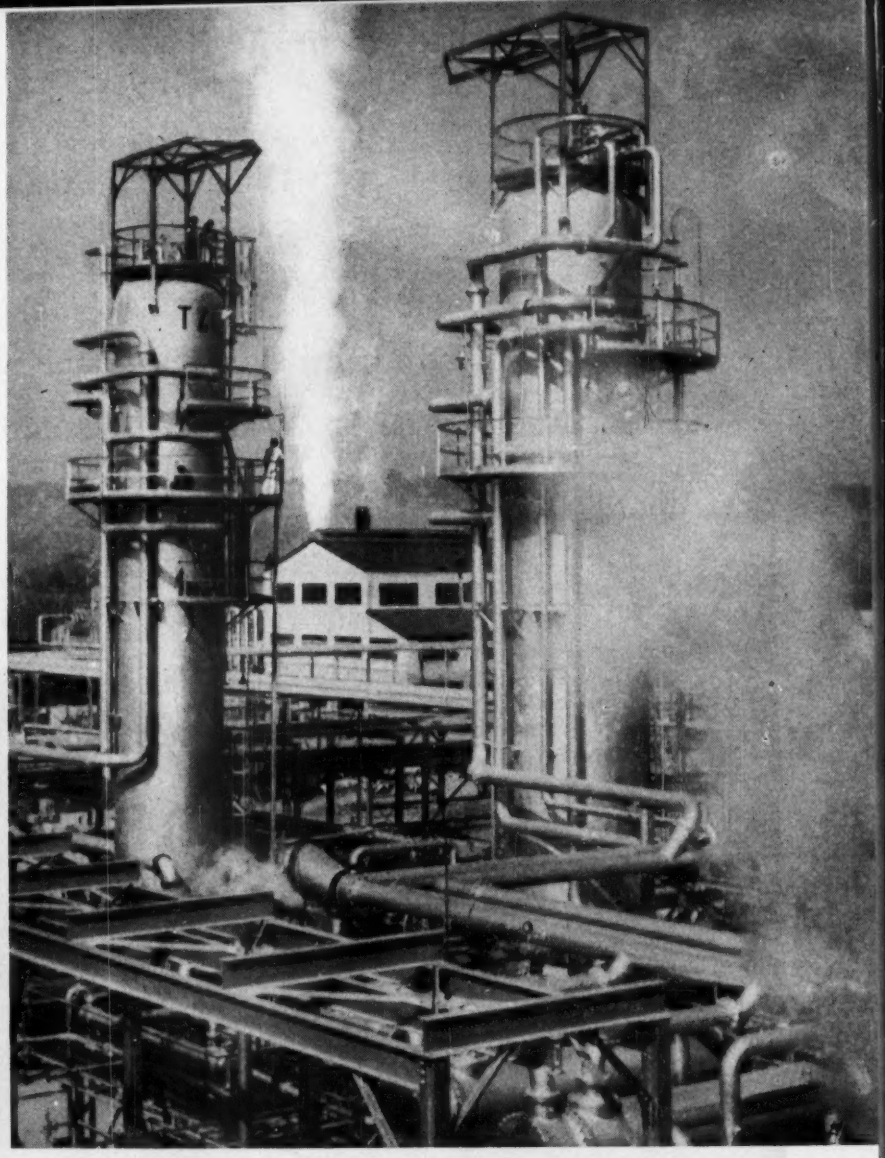
From agricultural sprays to wall-paper pastes, Methocel® (Dow methylcellulose) with its unusual properties and high quality has helped to improve many established products . . . even made new products possible. Films and coatings formed of Methocel are tough, flexible and water-soluble, yet resistant to almost all greases, waxes, oils and solvents. As a thickener, Methocel—offered in nine viscosity types from 10 cps to 7,000 cps—has proved effective and economical. It permits a choice of the right viscosity for better control and performs efficiently in lower concentrations. For these and other important properties of this uniform synthetic gum, Methocel is being utilized to solve problems of manufacturing economy and simplification in many industries, and new applications are constantly being added.

To aid in your investigation of Methocel, send for a sample and complete information on its uses. THE DOW CHEMICAL COMPANY, Midland, Michigan.

you can depend on DOW CHEMICALS



DOW

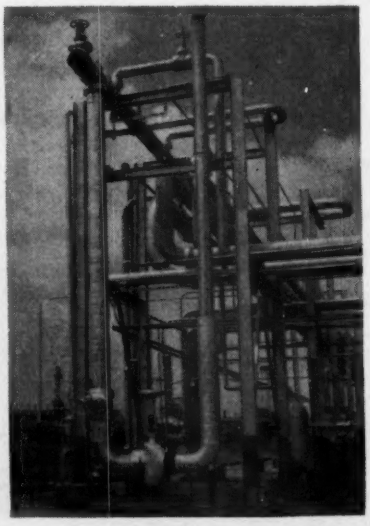


chemical observers say it may be the forerunner of a whole chain of new enterprises.

• Celanesa Mexicana S.A., which built a cellulose acetate yarn plant in Ocotlan, Jalisco in cooperation with Nacional Financiera, at a cost of $8 million. Last year output: more than 20 million lbs. of rayon filament.

An associated company (also controlled by U.S. Celanese), Viscosa Mexicana S.A. now turns out viscose and rayon staple at a rate of 24 million lbs./year; a third (Cellulosa Nacional) makes purified cellulose; a fourth will soon start production of vinyl plastic at Mexico City.

• Quimica Nacional, the governmental holding operation banding together seized German holdings, which has just recently secured permanent control. Its products range through almost every type of chemical—from epsom salts and soda to plastics and pharmaceuticals.

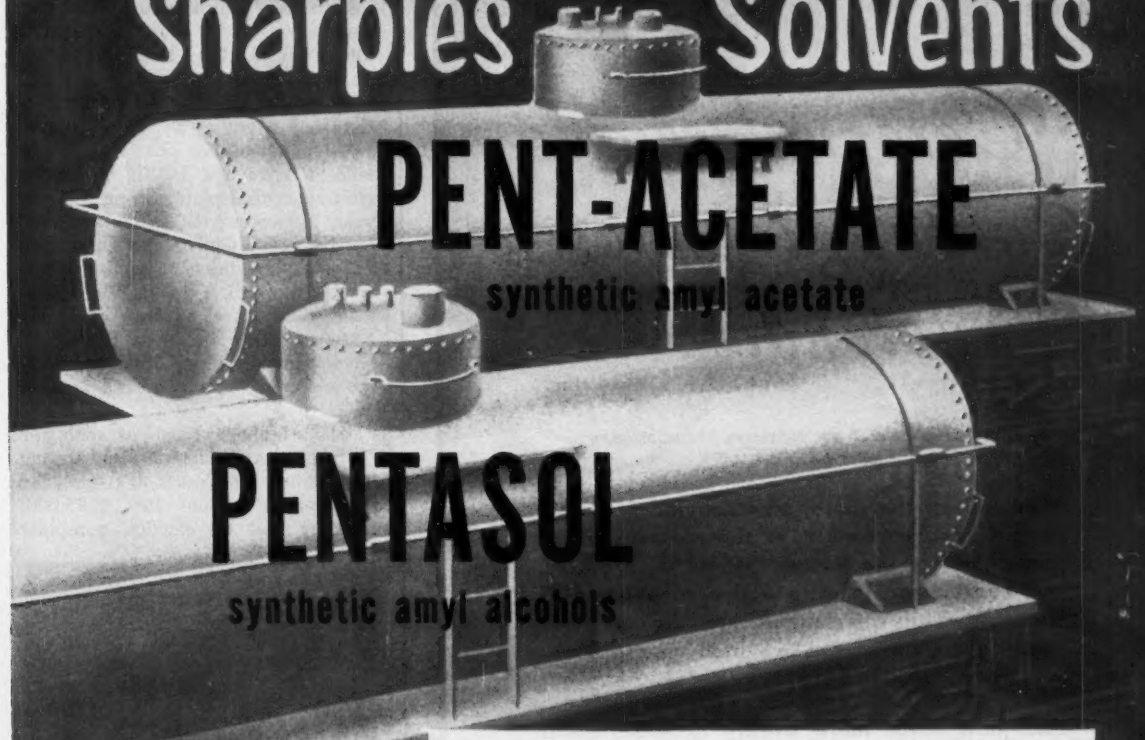


PERMEX: Mexico's oil monopoly at Posa Rica processes liquid sulfur (left), operates a gas treatment plant (above) . . .

• Smith Kline & French, Squibb, Sidney Ross, Winthrop-Stearns, Abbott, Parke Davis, Lederle—all with modern plants in Mexico City going full tilt. Result: import of packaged pharmaceuticals has practically ceased in Mexico this year, promises to vanish by 1954.

And just this week, movement is reported under way for consolidation of Celanese's Mexican affiliates. Company officials say no final arrangements have been reached as yet.

Products range widely; some operations use basic chemicals, others just package, compound ointments, liquids, tablets. But the search is on for a more extensive source of dependable raw materials. Most manufacturers concede they're making great strides, should be on their own within a year.



. . . runs a sulfur recovery unit.

Further Difficulties: Always a problem in a young industry, the lack of integration in Mexico's chemical industry causes headaches to efficiency-minded Americans. Their worried cry—that valuable by-products are being needlessly tossed aside, raising the cost of production—seems finally to be sinking through, though. This year, the government echoed the appeal, advised the industry to pattern itself after the state-owned Permex Co., which is adding sulfur recovery units to all its major oil installations throughout the country.

The Sidney Ross Co., S.A., a subsidiary of Sterling Drug Inc., is typical of American companies engaged in pharmaceutical production in Mexico. It produces almost all its medicines on the spot "except where physical volume of specialized formulas doesn't warrant it."

LABOR. . . . . .

Decision Dangling: There's still a future for nonaffiliated, one-plant unions in the chemical industry, but they can expect to be under unrelenting attack from the big, nationwide unions.

These appear to be the meanings of the recent voting by employees at Du Pont's neoprene plant near Louisville, Ky. In the fourth bargaining election at that plant during the past year, 740 votes went to the independent Neoprene Craftsmen's Union and 717 to International Chemical Workers Union (AFL); but ICWU is challenging 24 votes, so once again the National Labor Relations Board will have to decide on whether to certify the apparent winner or call another election.

Besides filing objections with the NLRB, the AFL union is also carrying its fight into the courts. It's suing the independent union for $225,000, claiming that an election pamphlet

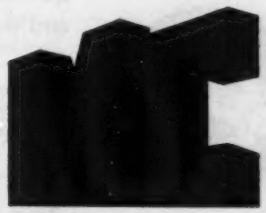
NEOPRENE'S COOPER, PERRY: For independent unions, a new ray of hope.

issued by the NCU was libelous in referring to "labor racketeers." NCU leaders Lee Cooper and Earl Perry haven't replied as yet.

Meanwhile, the plant's 1,500 employees have been without union representation; but this hasn't seemed to hurt them. The company handed them an 8¢/hour wage increase two months ago, bringing average base pay up to $2.02/hour.

•

Warning on Wages: Although the average wage rate in all U.S. manufacturing industries held steady in June, chemical labor costs climbed upward again, according to latest of-



MgO CUSTOM PRODUCTION

new "entirely variable" kiln produces magnesia to your specific needs

Now in operation . . . a new automatic kiln, *entirely variable* for operating speed and temperature, giving you calcined magnesite of exactly the right granule size and chemical reactivity for your particular application.

The new kiln, recently installed at Michigan Chemical's Saint Louis, Michigan, plant will produce hardburned magnesite with more than 97% magnesium oxide content and low ignition loss for high temperature refractories. It will also turn out lightburned magnesite of such physical state and density it can be handled in hoses like water for ultimate speed in compounding.

For a fast and dependable supply of magnesia, "custom produced" to *your* specifications, contact Michigan Chemical Corporation at once.

ficial word from the Bureau of Labor Statistics. Average hourly earnings inched up one cent to $1.82, and average weekly earnings moved up 24¢ to $75.17. This marked the eighth consecutive month in which hourly rates increased in the chemical industry.

Similar wage trends in Canada prompted this warning from a Toronto industrial consultant: "A regular diet" of wage increases of 2.2% a year and individual output increases of only 1.75% a year will mean that the cost of living will be doubled every 12 years.

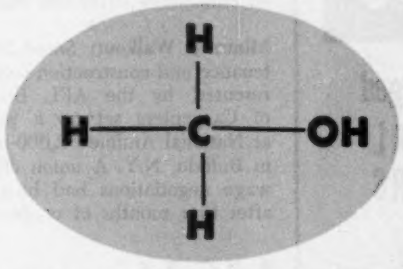
•

September Settlement: The coming of cooler weather coincides with signing of new contracts at a number of chemical plants where labor relations were marked by hot tempers during August.

• At Rensselaer, N.Y., the 985 members of ICWU Local 61 decided to end their 11½-month strike at Winthrop-Stearns, Inc., and at Sterling-Winthrop Research Institute. The new agreement calls for a 6½% wage increase now, another rise of 5¢/hour next June 7, a special 5¢ boost for chemical operators and group leaders, and certain seniority rules asked by the union.

• Further progress in pacification of the various groups of striking construction workers in Texas (*CW, Aug. 8*) is permitting contractors to try to get numerous chemical expansion projects back on schedule. Following the treaty with the 2,100 carpenters in the Sabine Lake area (*CW, Sept. 5*), the contractors have now come to terms with the 4,000 laborers in the Galveston-Freeport vicinity and the 200 operating engineers in the Beaumont-Orange area.

• At Carneys Point, N.J., where Du Pont employees had earlier threatened to stage the first strike in their plant's history, the company and the independent Collective Bargaining Agency came to terms. The 228 employees who had been earning from $1.37½ to $1.88½/hour are to receive a 5½¢ increase; 329 employees in the $1.89½ to $2.28½ bracket will get a 6½¢ rise; and nonexempt salaried employees are in line for a parallel increase of 2.9%.



•

Dollars for Dixie: Pay rates are going up in Southern chemical plants this week.

• Carbide and Carbon Chemicals is boosting wages in two localities. At Texas City, Tex., C&C employees will have a 4% across-the-board increase under a contract running to

TOUGH JOBS call for...

"Buffalo" FANS

like these rugged INDUSTRIAL EXHAUSTERS

• Supplying primary and secondary air for a lime kiln is a job calling for constant pressure and twenty-four hour reliability. "Buffalo" Industrial Exhausters have proven themselves ideal for such service. All-welded heavy steel plate housings and rotors give them ample strength and rigidity. Note the extra-heavy shafts and large bearings to take the torque and thrust. Available with either Material Wheels or Air Wheels, these fans have earned a reputation as the "work fans of industry", on every type of exhaust and pneumatic conveying job, as well as mechanical draft.

"Buffalo" Industrial Exhausters may be had in high-heat models, rubber-lined, coated or alloy construction for handling corrosive and/or abrasive atmospheres.

For fans that will perform as rated, and that will stand up on the job, specify "Buffalo". Why not write for recommendations on *your* air application?

B&I . . . . . .

Sept. 1, '55. Adjustments ranging from 7 to 10¢/hour are promised to about 10,000 employees at South Charleston and Institute, W. Va.

• Columbia-Southern Chemical Corp. and United, Gas, Coke & Chemical Workers (CIO) have agreed on a general 5% wage increase for approximately 500 employees at Corpus Christi, Tex. The old contract, which provided for an 11¢ boost, had ended an eight-week strike last winter.

•

Minority Walkout: Some 200 maintenance and construction workers represented by the AFL Brotherhood of Carpenters set up a picket line at National Aniline's 2,000-man plant in Buffalo, N.Y. A union official said wage negotiations had broken down after four months of conferences.

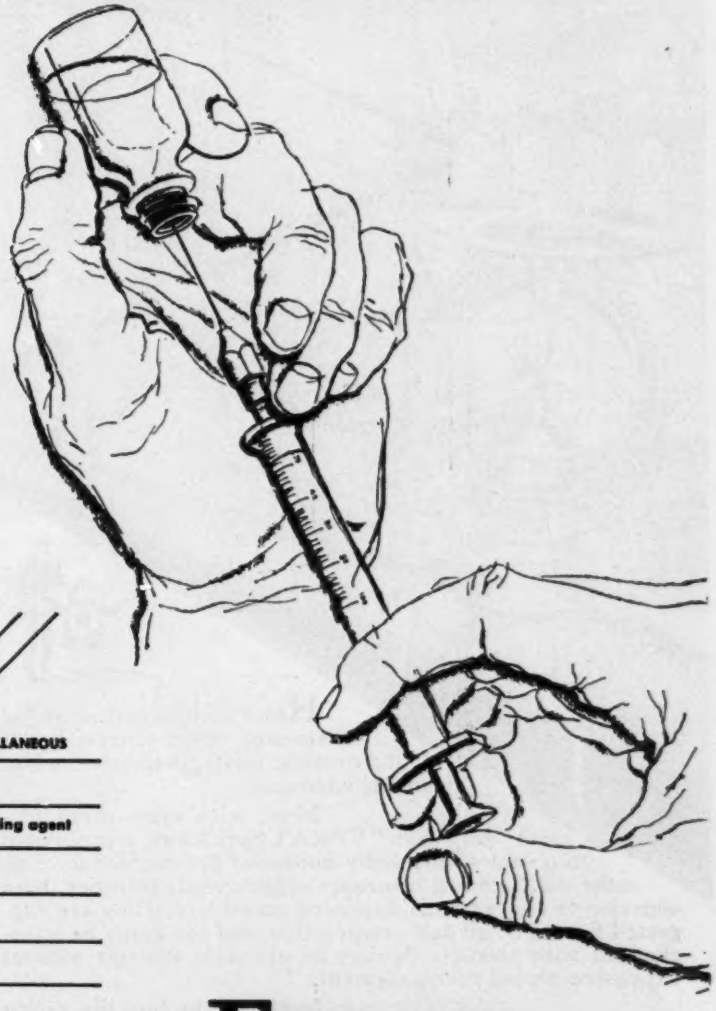
LEGAL. . . . . .

Ouster by Taxation: In two distant parts of the country, law-makers are pondering new tax measures of concern to chemical companies.

• In Baltimore, the City Council is contemplating an end to two property tax exemptions: one on manufacturing machinery, one on inventories. Some manufacturers say that a levy of $1 per $100 valuation on equipment and inventories would force them to move their plants out of town.

• Arizona's legislature, in its special session starting next month, will take up a proposal for a use tax, which in effect would extend the state sales tax to goods purchased in other states for use in Arizona.

•



Chemical Firm Sued: Accusing a chemical manufacturer of negligence, James K. Miller of Milford, O., is suing the Van DeMark Chemical Co. of Lockport, N.Y., for $78,633 in Federal District Court in Buffalo, N.Y. Miller says that while working in the laboratory of Cincinnati Chemical Works, Inc., he suffered lung injuries caused by phosgene gas leaking from a container made and filled by Van DeMark.

•

Battle on Boric: Moves to require that drug store products containing boric acid or sodium borate be labeled "poison" have been defeated in several large cities, but the Food & Drug Administration is preparing to put out a national regulation to that effect. FDA is collecting medical evidence and opinion that use of boric acid in baby powders can lead to "severe symptoms and death," and that "symptoms may be minimal until a lethal or nearly lethal dose has been absorbed."

EASTMAN
INDUSTRIAL CHEMICALS

raw materials for the pharmaceutical industry

HERE'S important news for insurance underwriters; building owners; safety, maintenance and planning engineers.

Now, with *new*—more efficient "Automatic" SPRAY Sprinklers, it is possible to obtain substantially improved fire protection *at no extra cost.* Leading insurance organizations consider them superior to conventional approved sprinklers. They are suggested for use on all new construction, and can easily be interchanged with obsolete devices on old style systems without expensive piping rearrangement.

In short, absolute fire safety with "Automatic" SPRAY Sprinklers is worth far more than it costs. It's a long-lasting value that knows no measure.

Better get the facts on "Automatic" SPRAY Sprinklers, the most important advancement of the century in the science of fire protection. Fill out and mail the coupon below for illustrative literature.

B & I . . . . . .

Oil and Aluminum: Two big antitrust suits, both of potential import to the chemical industry, are this week simmering in U.S. District Court in New York.

• The big oil companies accused of conspiring to form an international monopoly in petroleum products are vigorously contesting that civil action. Latest move was the filing of an answer by Socony-Vacuum, which hotly denies the charge, insists that world-wide expansion of oil companies has been possible "only by the dynamic energy of a competitive industry."

• Aluminum Import Corp., U.S. sales agent for Canada's big Aluminum, Ltd., has received permission to intervene in the Justice Dept's reopened suit against Aluminum Co. of America. Aluminum Import asserts that there's nothing illegal about its contract to sell 1,200 million lbs. of aluminum to Alcoa and another 373 million lbs. to Kaiser Aluminum & Chemical.

•

Growl on Pollution: Syptomatic of the national trend toward sternness in enforcing antipollution laws, the Michigan State Water Resources Commission is taking steps against Reichhold Chemical at Ferndale, the New York Central's roundhouse at Niles (alleged source of phenol wastes) and other plants accused of polluting streams with industrial wastes.

KEY CHANGES. .

R. W. Van Tuyle, to director and vice-president for manufacturing, Emery Industries, Chicago.

Robert Shapiro, to vice-president, Industrial Soap Co., St. Louis.

James Wilson, to production manager, Florida chemical phosphates department, International Minerals & Chemical.

J. F. Havard, to vice-president for manufacturing, Pabco Products, San Francisco.

Robert Gray, to factory superintendent, Metal Hydrides, Beverly, Mass.

Norman Hathaway, on leave from Davison Chemical to direct chemicals and rubber division, U.S. Dept. of Commerce's business service agency.

Thomas Bradley, to director of sales and promotion, **Arthur C. Emelin,** to director of operations, Pfizer Laboratories, New York.

Edward Gavin, to sales manager, Gallowhur Chemical, New York.

All Directions from Ethane

There's been a battle royal between acetylene and ethylene for some time. Each is seeking to establish itself as the preferred building block of the petrochemical family. Now comes National Petro-Chemical, the $35-million offspring of National Distillers and Panhandle Eastern, with an array of processes that may give the two a chance to battle it out on the firm's home grounds in Tuscola, Ill.

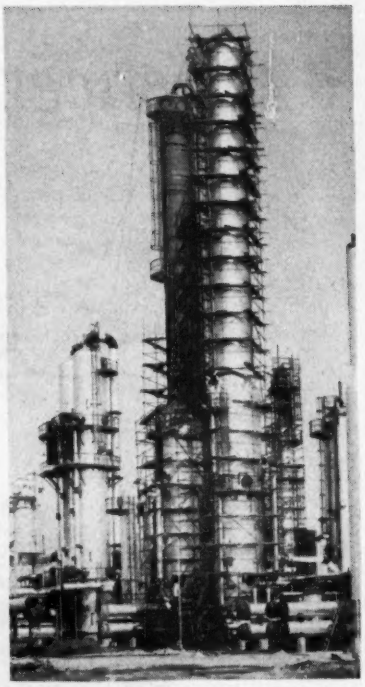
The Tuscola plant is a pertinent example of how product begets product in the process industries. The initial project was to crack ethane to get ethylene and hydrogen; the ethylene would be put to work as raw material for ethanol and ethylene chloride.

That still left the firm with a lot of hydrogen. So National Distillers (60% owner of National Petro-Chemical) came up with a plan to use it in the synthesis of ammonia, which will be sold as is; also be used to make nitric acid and ammonium nitrate.

But the ammonia synthesis involved the purchase of an air separation unit built by Spayco, Inc., North American Division of L'Aire Liquide (Paris, France) for an estimated $750,000, which in turn will give National a supply of argon and oxygen. The argon will be sold to Air Reduction.

Acetylene on Tap? And according to National, the economics of the project are such that it will be a profitable venture even if the oxygen is vented. But that's unlikely; the company currently has several possible applications for the oxygen under study.

One of the more attractive uses for oxygen near cheap natural gas is to make acetylene via the Sachse process or some modification of it. Carbide and Carbon and Monsanto are doing just that, as will American Cyanamid in its new Louisiana plant. It's one of the proposals that National is studying right now.



But though the acetylene project looks attractive, it's not the only one under consideration. National says it's looking into the possibilities of using oxygen in the partial oxidation of natural gas to hydrogen peroxide. No such process is presently being commercialized, but Du Pont, for one, went so far as to patent one (U.S.P. 2,533,581, *CIW, May 5, '51*). Other possible uses for its oxygen says National: production of synthesis gas by The Texas Co.-Hydrocarbon Research partial oxidation process, oxidation of ammonia to nitric acid.

Tuscola Timetable: There's no pressing need for a decision right now, however, for the ammonia plant itself is still on the drawing boards, won't be in production before the last quarter of next year. And meanwhile, National Petro-Chemical is pushing ahead with the rest of the plant.

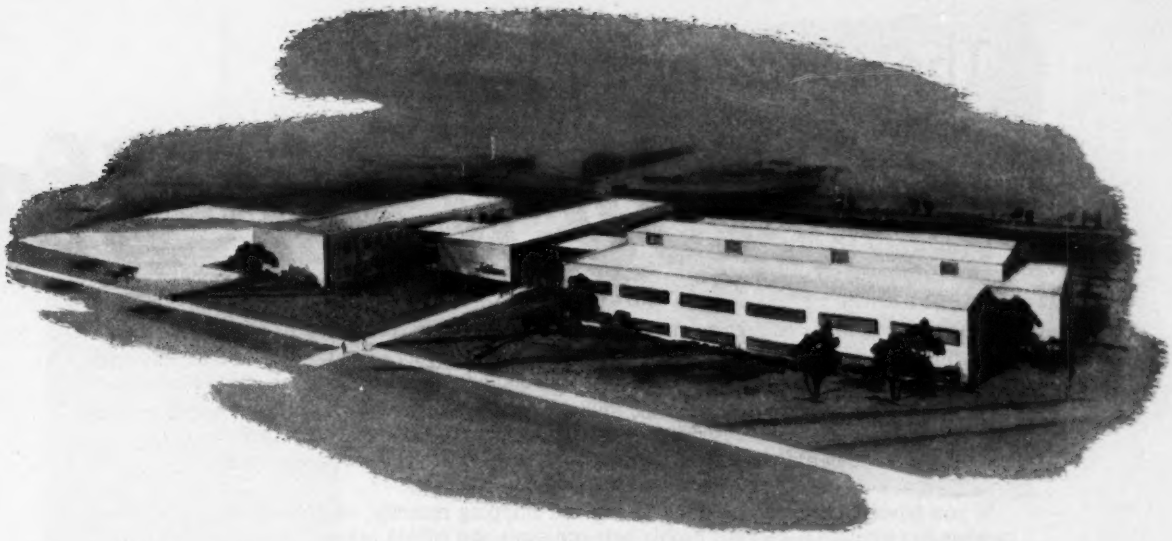
The first unit, which recovers liquid hydrocarbons from the natural gas and separates them into ethane, propane, and butanes, has been in operation since July. Presently, the ethane is being pumped back into the pipeline. But when the chemical plant starts up late this month, it will be utilized to supply the ethylene and hydrogen.

It will start off at 40% capacity. When it hits its rated stride, it will be cracking 10 million cu. ft./day of ethane to produce 8,670,000 cu. ft. of ethylene and 490,000 cu. ft. of hydrogen.

Approximately 90% of the ethylene will be routed to ethanol production. The ethanol plant, which will come in around the middle of next month, uses a straightforward process involving the reaction of ethylene with sulfuric acid, then hydrolysis to ethanol. Sulfuric acid will be made on the spot in a plant designed by the National Distillers' U.S. Industrial Chemicals.

EXTRACTION UNIT: First of the family.

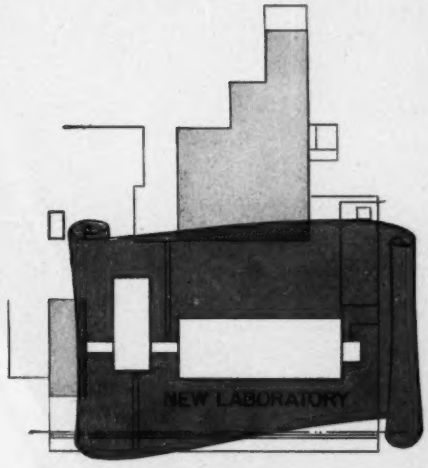
The remaining 10% of the ethylene will be reacted with hydrochloric acid in the presence of a catalyst to make ethyl chloride. This plant will go on-stream in November, is designed to make 50 million cu. ft./year of ethyl chloride.



Settling on the Site: At Tuscola, National Petro-Chemical figures it has an almost ideal plant site. It's a small town (population: 3,000), but it's situated at a junction of two natural gas transmission lines, the Panhandle Eastern Pipe Line Co. and the Trunkline Gas Co. It's also located at the crossroads of U.S. Routes 36 and 45, at an intersection point for the B & O, the Chicago and Eastern Illinois, and the Illinois Central Railroads.

Water (9 million gal./day) will come from the nearby Kaskaskia River. Utility requirements will be met through a power plant capable of providing 600,000 lbs. an hour of steam at 625 psig. and 750 F.; two generators will provide 15,000 kva. of electricity. Compressed air will be available at the rate of 1 million cu. ft./day.

Moreover, three certificates of necessity for fertilizer plants have listed Tuscola as a site. International Min-



Building on By-Products

National Distillers will soon find itself in the ammonia-nitric acid business and probably others as a result of available by-product hydrogen from National Petro-Chemical. In so doing, it's following the trend of electrolytic caustic-chlorine manufacturers, which have recovered hydrogen from cells and used it to make ammonia. Mathieson has been doing that since 1925, Du Pont since 1926. In 1927, Dow adopted the process for its Pittsburg, Calif., plant. Pennsalt has been using by-product hydrogen from chlorine cells in the production of ammonia at Wyandotte since 1932. More recently, Columbia-Southern decided to try it at its Natrium, W. Va., plant. An outstanding example of integrating by-product hydrogen into its business can be found at Hooker, which markets it for a variety of purposes aside from using it as a raw material for ammonia.

RESEARCH PROGRESS

...by Jefferson for the industry

Modern in every respect, and five times larger than original space, Jefferson's new laboratory facilities at Austin, Texas, have been completed.

Here, in addition to research on new products for industry, new production techniques, and new uses for current products—Jefferson has special facilities available for making *your* new products on a custom basis for your market and sales development.

The enlarged Austin research center—plus new pilot plant facilities—enables Jefferson's research service to keep ahead of the company's continuing growth in the petrochemical industry as producers of *essential chemicals from hydrocarbon sources.*

The extra point is . . .

Enough to make the

The extra point is enough to make a difference between strong teams evenly matched.
In the same way, there are extra points about multiwall sacks which can be the important difference in the "Rose Bowl" decision your company makes about its supply of sacks.
Through its continuing research, the multiwall sack industry has made tremendous progress making possible the increased use of this convenient, economical and sturdy package.
Today's standards are obsolete tomorrow. This progress is important to you in greater economy and efficiency in packing and shipping.
If you haven't checked on your packing and shipping recently, do so now when the squeeze is on your profits between costs and selling prices.
Don't be content with obsolete standards on breakage, sack design or quality.
You may be pleasantly surprised that the extra points which Hudson can give you make a tangible saving—
enough to make a difference.

difference

EXTRA POINTS for Hudson

QUALITY CONTROL
—from tree planting to sacks, Hudson is an integrated operation.

PRODUCTION UNIFORMITY
—because *all* Hudson sacks are produced on modern equipment.

RIGID INSPECTION
—a 39-point inspection and test program.

WRITTEN GUARANTEE
—with your assurance of satisfaction in advance.

MODERN PRINTING PLANT
—for extra display appeal and increased sales for your product.

SACK DESIGN SERVICE
—by Royer & Roger, Inc., leading industrial designers, yours exclusively from Hudson.

TIME-MOTION SERVICE
—Movies of your packing operation for efficiency study.

SPECIAL SERVICES
—on delivery, storage and inventory control problems.

PROBLEM PRODUCT PACKAGING
—specialists to study your requirements.

HERE'S ONE EXTRA POINT FOR YOUR PACKAGING

. . . Sack Design Service by Royer & Roger, Inc., Yours exclusively from Hudson

Modern design in packaging has proved an important extra in sales appeal. To give you the benefits of product identification and recognition through modern design, Hudson has retained the services of Royer & Roger, Inc., leading industrial designers, with a staff of more than 2,000.

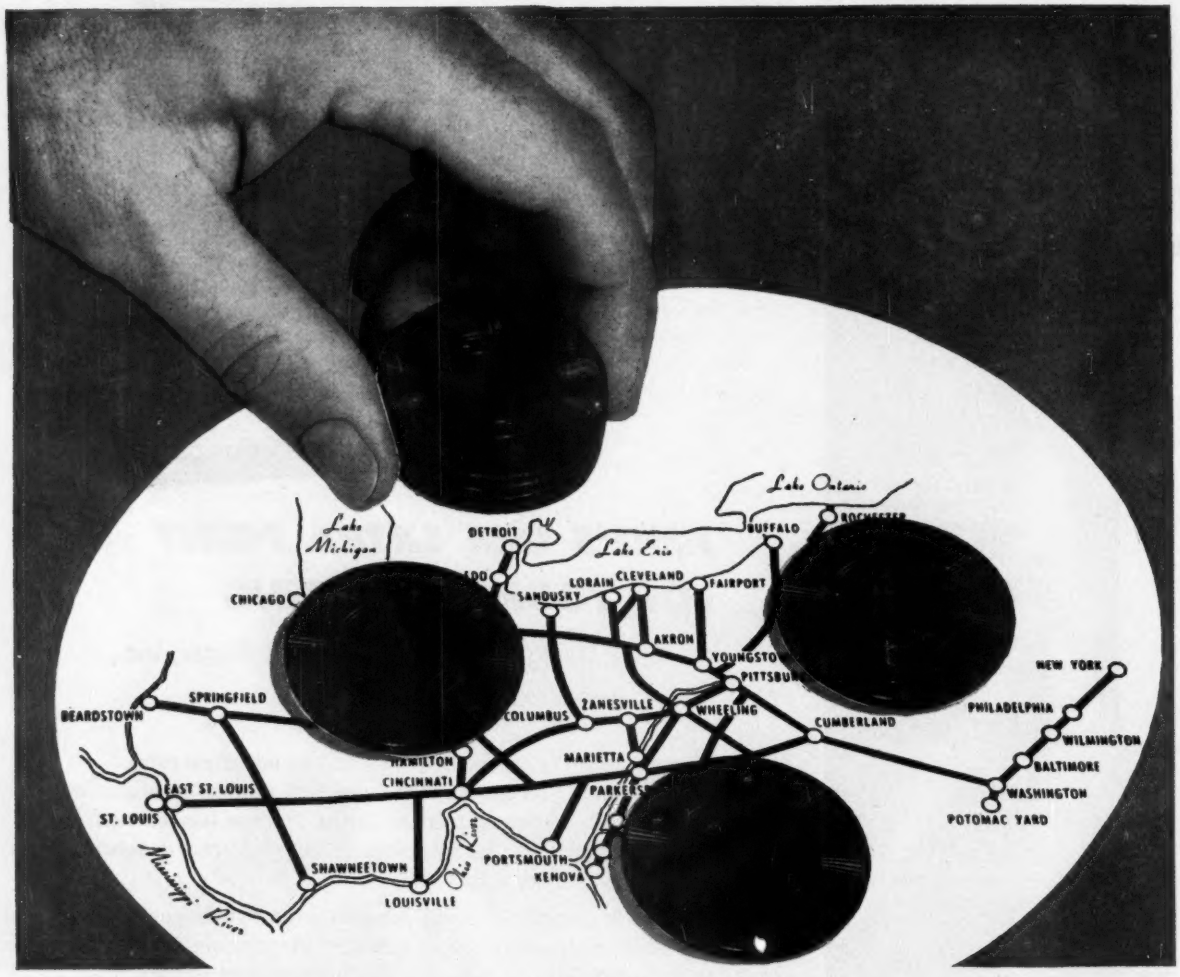
From their specialized experience comes the knowledge and ability to create a package that wins attention and builds sales in the competitive market. And Hudson's modern printing plant reproduces the design with fidelity, sharpness, and color brilliance.

If you want a new design by Royer & Roger for your sacks, send the coupon below today for full information — without cost or obligation, of course.

You'll find a design by Royer & Roger, faithfully reproduced in Hudson's modern sack printing plant, can be an extra point for your product — enough to make a difference.

Send the coupon today. Hudson Pulp & Paper Corp., 505 Park Avenue, New York 22, New York.

HUDSON PULP & PAPER CORP.
Dept. CW-919, 505 Park Avenue, New York 22, New York



YES! **We are interested in a new sack design by Royer & Roger, Inc. Please send details.**

Cincinnati 2	Phone: DUnbar	2900
Chicago 7	Phone: WAbash	2-2211

Baltimore & Ohio Railroad

Constantly *doing things*—better!

erals and Chemical Corp. has received a $10,500,000 certificate for a nitrophosphate plant there, although it will not comment on the plant or verify that the site will be Tuscola. E. Rauh & Sons Fertilizer Co. has received a $1,928,000 certificate for a nitrophosphate plant as well as one for $916,000 on a regular superphosphate plant at Tuscola. It hasn't decided which one it will go ahead with, or if Tuscola will be the site. There's also a persistent industry report that one other firm is considering Tuscola as a plant site for a nitrophosphate plant.

Whoever decides to go ahead, National Distillers will be in an enviable position. In return for the new sulfuric acid it will supply National Petro-Chemical, it will get the nitrogen and spent sulfuric. Thus with its proposed production of ammonia, nitric acid and ammonium nitrate, it will be able to supply a fertilizer maker with almost anything he wants—spent sulfuric for a straight superphosphate, nitric acid for nitrophosphates, ammonia or nitrogen solutions for ammoniating regular super.

Day for the Plant

Meetings of the American Chemical Society are traditionally the place where researchers gather to exchange news and views. But at the 124th national meeting of the ACS in Chicago last week (*see also p. 88*), the plant man also had his day when representatives of The Babcock & Wilcox Co. (New York City) held forth on means of analyzing sulfur dioxide and sulfur trioxide contents of boiler flue gases; of determining carbon in an alloy of sodium and potassium; of laying down a plan for analyzing industrial water.

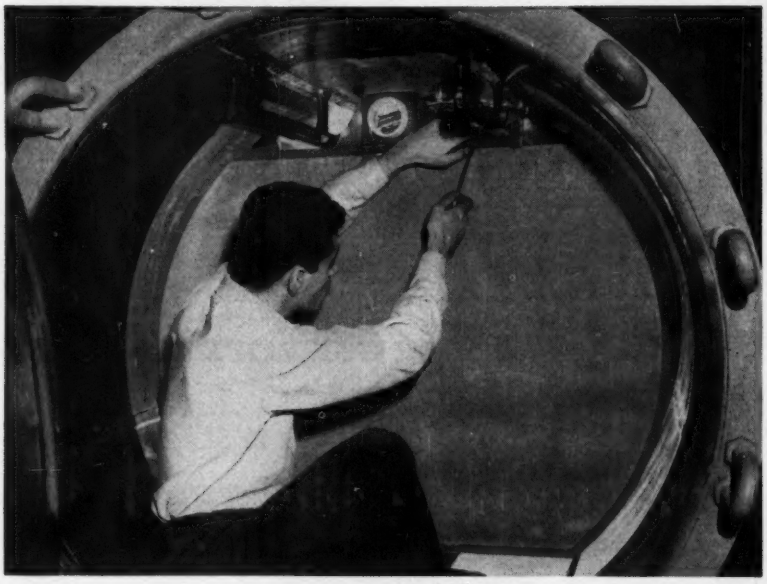
• Delivering a paper on behalf of himself and the firm's E. K. Diehl, R. E. Matty outlined a quick and easy method of checking the sulfur dioxide and sulfur trioxide contents of flue gases. As Matty points out, the sulfur content of boiler fuels has been on the increase, and the net result can be a serious corrosive effect on parts of the boiler. The method he proposes has been used in the field, has cut the analysis time from one day to an hour. Required equipment: small table, lab glassware, a source of distilled water.

• At the same meeting, a paper authored by B&W's K. G. Stoffer and J. H. Phillips (and delivered by the latter) dealt with the problem of formulating an analysis of industrial water. The plan they propounded came about at the behest of the American Society for Testing Materials,

How to keep informed on the "with what" part of your business

AT YOUR FINGER TIPS, issue after issue, is one of your richest veins of job information – advertising. You might call it the "with what" type – which dovetails the "how" of the editorial pages. Easy to read, talking your language, geared specifically to the betterment of your business, this is the kind of practical data which may well help you do a job quicker, better – save your company money.

Each advertiser is obviously doing his level best to give you helpful information. By showing, through the advertising pages, how his product or service can benefit *you* and *your* company, he is taking *his* most efficient way toward a sale.



Add up all the advertisers and you've got a gold mine of current, on-the-job information. Yours for the reading are a wealth of data and facts on the very latest in products, services, tools . . . product developments, materials, processes, methods.

You, too, have a big stake in the advertising pages. Read them regularly, carefully to keep job-informed on the "with what" part of your business.

McGRAW-HILL PUBLICATIONS

Another new development using

B. F. Goodrich Chemical *raw materials*

B. F. Goodrich Chemical Co. does not make this industrial filter. We supply the Geon vinyl resin only.

CORROSION-RESISTANT PLASTIC REPLACES METAL—COSTS 66% LESS!

HERE'S another new use for rigid Geon vinyl plastic—one that improved the product and saved money to boot!

Formerly, expensive metal alloys were used to make essential parts of the leaf-type, acid filter pictured. But these metal parts would be eaten by corrosion—some in a matter of hours. Costly replacements and lost time ran up expenses.

So the manufacturer tried a rigid Geon vinyl plastic. He found it not only had the required corrosion resistance, but cost 3 to 4 times *less* than special metal alloys. Now the filter leaf frames, nuts and bolts holding the leaves together, rollers holding the leaves in place, heel plate and various pipe fittings are all made from rigid Geon.

Versatile Geon vinyl materials have helped solve many problems. Products made from them can be either rigid or flexible, transparent or colored. And Geon resists acids, alkalies, most solvents and other chemicals, heat and cold. Let us help you select a Geon material suited to your needs—to help you improve or develop more saleable products. For technical information, please write Dept. E-10, B. F. Goodrich Chemical Company, Rose Building, Cleveland 15, Ohio. Cable address: Goodchemco. In Canada: Kitchener, Ontario.

GEON RESINS • GOOD-RITE PLASTICIZERS...the ideal team to make products easier, better and more saleable

GEON polyvinyl materials • HYCAR American rubber • GOOD-RITE chemicals and plasticizers • HARMON colors

PRODUCTION . . . . .

which appointed a task force to study the problem and appointed Phillips as chairman. It divides the properties and constituents into four principal categories, based on the type of sample or sampling required, and whether they're affected or unaffected by contact with the atmosphere. A system of lines and sample-group blocks associates properties and constituents with their appropriate sample group, also indicates possible successive analyses of several constituents from a preceding analysis. As the authors see it, the scheme will supply a basis for further studies dealing with water analysis and provide government agencies and industry a common ground for studying water quality in streams and other water supplies.

• Not so broad in application as yet, but also significant was the third paper, by the same team, Phillips and Stoffer, dealing with a recently declassified method of determining the amount of carbon in sodium-potassium alloy. The alloy is being widely explored as a heat-transfer medium in atomic power applications. One of the difficulties with it is that it has a tendency to transport carbon also. This means it can weaken steels by removing carbon, or it can add carbon to other metals where it would be harmful. Briefly, the method of analysis consists of burning a sample of the alloy in an atmosphere of oxygen. The carbon is converted to carbon dioxide, which is absorbed and weighed. But to perfect it, said Stoffer, the firm had to design and construct new equipment and the engineers had to devise methods of accurate sampling of the molten metal. They also had to learn how to handle it safely.

EQUIPMENT. . . .

Recording Turbidity: Just out from General Electric (Schenectady, N.Y.) is a recording turbidimeter that continuously reads the number of particles suspended in liquids, records it permanently. It can be used in conjunction with a visible or audible alarm for monitoring and control. G. E. sees it finding a place in any process where turbidity is a factor. Specifically, it suggests it for: chemical and paper plants where turbidity affects the processing; water treatment plants; monitoring of wastes dumped into streams or lakes; detection of oil contamination in boiler feedwater; processing where filter efficiency must be monitored.

The instrument measures the ratio of transmitted light to scattered light.

In the Chemical Industry

where performance counts you can count on Enjay for...

Uniform, High Quality

PETROHOLS

(ISOPROPYL ALCOHOL)

ENJAY

A pioneer and leading marketer of isopropyl alcohols, the Enjay Company offers a complete line of Enjay *Petrohols*. More and more manufacturers are counting on Enjay for their supply of *Petrohols*, methyl ethyl ketone and other Enjay solvents widely used in the surface coating and chemical industries.

A complete line of dependable products for Industry

PRODUCTS FOR REMOVING OXIDES AND SCALE FROM METALS

For Steel — Copper — Aluminum — Nickel Alloys

ALKA-DEOX PROCESS — for electrolytic removal of oxides and scale from steel in an ***alkaline*** solution. Fast pickling done without any attack on basis metal. Less hydrogen embrittlement — smuts removed from many alloy steels. Uses Enthone Compound 134.

COMPOUND N-165S — Accelerates pickling of nickel-chromium alloys and speeds dissolving of nickel, zinc, cadmium, tin and lead in acids.

DESCALER 2A — A powdered acidic compound added to water to make pickling solutions for iron and steel. Safer to handle than sulphuric acid. Gives controlled acidity to prevent overpickling. Contains surfactants to promote more uniform and cleaner pickling.

EBONOL "C" — Converts cuprous oxide on copper alloys to cupric oxide to accomplish fast cleaning of scaled copper alloys without etching.

COMPOUND 89 — An alkaline material used at room temperature for stripping oxide coatings from aluminum. Works in a few seconds.

ACID ADDITION AGENT — A surface active material extensively used in sulphuric and hydrochloric acid pickles to reduce fuming, to give better wetting and to promote better pickling.

INHIBITOR 8 — An all-purpose inhibitor for acids including sulphuric and hydrochloric acids. Also lowers surface tension. Economical to use.

COMPOUND 42 — A solvent acid cleaner for rapid removal of oil, rust and oxide from steel, zinc, aluminum and other metals to prepare them for painting or organic finishing.

ACTANE 33 — A dispersing agent added to acid pickles to remove colloidal and siliceous films from metals. Insures brighter and more adherent electrodeposits. Also an additive to sulphuric acid pickles to promote faster pickling of stainless steel and titanium. Can be used with sulphuric acid pickles to remove trapped silica in castings.

Detecting element is a single voltaic cell with current output proportional to the amount of light falling on it. The light ratio is determined by computing the voltage output of the photocell when scattered light and then transmitted light are successively incident on it.

•

Portable Filler: Between 15 and 55 containers per minute (depending on product and size of container) can be filled, says The Filler Machine Co., (Philmont Club Station, Pa.), with its new semiautomatic filling machine. It's a portable designed to handle chemicals, paints and other products of the process industries. Features the maker claims for it: easy cleaning, simple and quick change over to different liquids, economical operation. All contact parts are made of stainless steel or Monel. Filler Machine thinks it will fit nicely in plants where a fully automatic filler would be too expensive for the job.

•

New Dust Collector: Pangborn Corp. (Hagerstown, Md.) has a new dust collector that's said to answer the problem of continuous, automatic dust collection. Named the CH-3 collector, it uses the principle of reverse air flow for continuous cleaning of its filter cloths by means of a traveling manifold whose reverse air blowers suck air from the clean side of the collector. The manifold covers three vertical rows of cloth-covered screen frames at a time, and the reverse air flow is blown through the center row of screens while normal flow through the other screens is prevented. That's done by a flexible diaphragm on the manifold that's inflated against the grid wall under flow of pressure when the blower unit is centered on a given row. The result, says Pangborn, is a unit that permits safe, efficient collection with low operating and maintenance costs.

•

Pneumatic Aid: Pantex Manufacturing Co. (Pawtucket, R.I.) is bringing out what it considers an aid for designers and users of pneumatically operated equipment. Tagged the Wobble-Rod Valve, it has, for opening or closing the valve, a lever that is a hardened rod so swiveled that the free end can move vertically, laterally, diagonally or in arcs or circles. Thus, the valve can be actuated by all manners of motion. The internal exhaust valve can automatically discharge an engineering and majoring in materials handling, will cover tuition costs for the last two years of college. The purpose: to encourage interest in the field among student engineers.

YOU SAVE MONEY BY SAVING WEIGHT...

with NORRIS-THERMADOR CYLINDERS *for gases, liquids and chemicals*

Design improvements and refinements in production technique have resulted in cylinders of lighter weight and better performance for many Norris-Thermador customers. Why not investigate our facilities to design and produce seamless or welded cold drawn pressure containers to your specific requirements?

We will submit preliminary proposals in answer to detailed requests. Write for descriptive brochures on the manufacture of cylinders and Norris-Thermador facilities.

Electrical Appliances

LIGHTEST WEIGHT WITH GREATEST STRENGTH THROUGH UNIFORM PRODUCTION

BUBBLES

Heat this Ferric Chloride Solution

without Corrosion

Evaporating water from a ferric chloride solution in an operation to reclaim hydrochloric acid is accomplished economically by a Submerged Combustion installation rated at 60,000,000 BTU per hour. Heat transfer surfaces do not corrode because they are the walls of bubbles in the liquid. In fact, this installation operated steadily for three years before even minor parts replacement was required.

Safety of operation is assured by the exclusive NOZ-L-MIX® principle, which keeps gas and air separate until they reach the point of actual flame.

If you are processing chemicals or treating metal ores it will pay you to find out how you can heat corrosive liquid at top speed and at lower cost with Submerged Combustion equipment.

We'd like to show you proof of these statements and explain how Subcomco® equipment can be applied to your operation. Get in touch with us today.

SUBCOMCO
is the only submerged type burner equipment employing
NOZ-L-MIX®

air cylinder, line or receiver when the valve closes, can be eliminated to hold air pressures after the valve has performed its function.

•

Now It's Standard: From now on, says Mine Safety Appliances Co. (Pittsburgh), demand-type oxygen and air masks will come complete with speaking diaphragms as standard equipment. A diaphragm facepiece has been standard for some time on the firm's Chemox apparatus, which generates its own supply of oxygen. As MSA figures it, a worker who can communicate to other workers while wearing a mask is more efficient. The facepieces also serve to boost worker morale, it says.

•

Protected by Poly: Latest use for polyethylene, says CaPlugs Div., Protective Closures Co., Inc. (Buffalo) is in its red CaPlugs as a protection for threading, tubing ends and fittings. They're nonthreaded, come in standard sizes to fit diameters ranging from ⅛ in. to 1½ in., can be had in special sizes up to 3½ in. A newer threaded line is available in sizes from 5/16 in. (24-thread) to 2½ in. (12-thread). They're useful, says the manufacturer, as duct and moisture seals, shipping protectors for delicate fittings, and dipping process inserts; and for masking threads and parts during paint spraying.

•

Centrifugal Freezer: Carrier Corp. (Syracuse, N.Y.) is extending the range of its centrifugal refrigerating machines with the addition of a new, smaller line ranging between 75 and 200 tons. (Its present line covers sizes from 200 to 2,000 tons). The Carrier centrifugal, says the maker, is the only one in this size range that can be connected to any type of drive desired: electric motor, diesel or steam turbine. It adds that the centrifugal can be adapted, with synchronous motors, to automatic constant speed so that the building or plant power factor correction can be furnished when desired. In keeping with its practice, Carrier will handle servicing and installation of the new line.

•

Materials Grant: Granting scholarships to college students is an old story for processing firms, not so common among equipment manufacturers. But the Clark Equipment Co. (Buchanan, Mich.) has done just that. It has set up a $2,000 scholarship fund at the Illinois Institute of Technology for students majoring in materials handling. It will be awarded to juniors working toward a degree in industrial

Containers that *Protect* your product ALL THE WAY

Sturdy steel drums and pails—made with care and accuracy in every detail make certain that your product quality receives protection *all* the way to its destination. They make certain that your products remain safely sealed through the various conditions of handling and shipping.

That's why J&L Steel Drums and Pails are standard packaging specifications for many leading product brands. They have proved through years of dependable service that they meet the most rigid tests for durability.

Plants for the manufacture of J&L Steel Drums and Pails are located in leading industrial centers to assure quick, efficient service to meet your requirements. Call the nearest J&L office . . . or, contact our headquarters office in New York City.

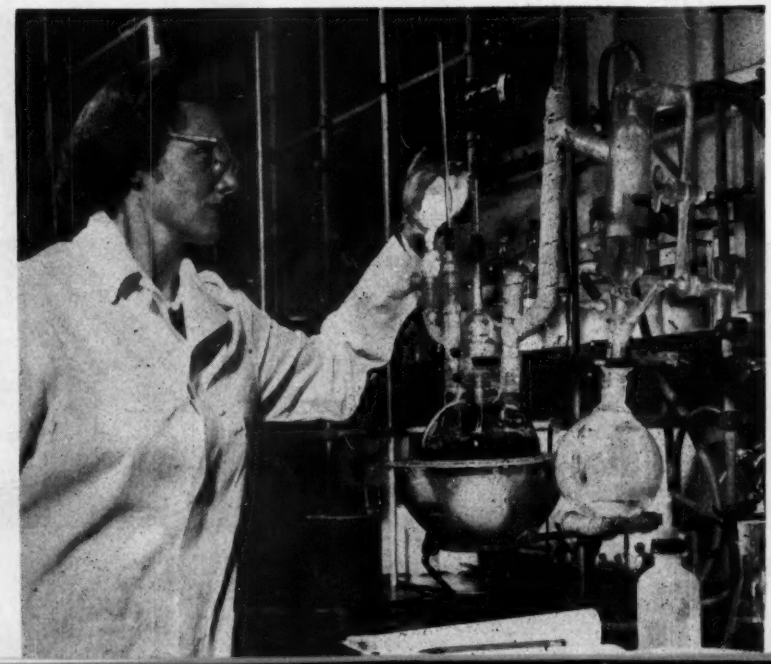
INTELLIGENT selection of agent for evaluation isn't easy. Group has thousands of potential herbicides to screen.

RESEARCH . . . . . .

Moving the Mountain to Mohammed

It would be convenient but highly impractical to maintain a different research laboratory for each set of experimental conditions likely to be encountered in the development of a commercial product. Agricultural chemicals manufacturers, for instance, would have to build complete research setups in each climate where their products find use. Propositions of this kind are expensive, to say the least, and unwieldy in the bargain.

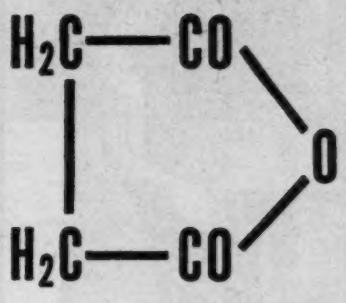
Most "ag" chemicals producers do the next best thing, send their neophyte insecticides, herbicides, etc., to a flock of outside experiment stations for field testing.



But American Cyanamid Co., for one, is making at least a partial break with convention, has moved the seashore as well as the mountain to Mohammed. In its agricultural chemicals research laboratories at Stamford, Conn., Cyanamid has facilities for simulating a broad range of environmental conditions.

The last word in "ag" chemicals layouts, Cyanamid's new facilities can all but guarantee successful results.

How the various components of the research center work together in the development of a new agricultural chemical is shown on this and the following page: the CW CAMERA has caught a new herbicide in the making.



Specially designed chambers permit careful control of light, temperature and humidity for evaluating the efficacy of test compounds under realistic weather situations. And, in a carefully conditioned room, Cyanamid researchers raise their own insects for sacrifice to hopeful new toxicants. Moreover, the new laboratories include thermostatically regulated greenhouses, outdoor field plots, and an arsenal of spraying and dusting equipment.

Nearly two years under construc-

SYNTHESIS of related compounds pinpoints activity of structural groupings.

Expanded Production
of a Versatile, Reactive
Pharmaceutical Intermediate

National
SUCCINIC ACID ANHYDRIDE

Molecular Weight 100.1 *Practically-white flakes*
Solidifying Point 117.5°C *Slightly soluble in solvents*

This reactive chemical now has many uses in pharmaceutical and food chemistry. Its interesting molecular structure commends it to those who work with esters, salts, acyl compounds, succinyl derivatives, lactones, pyrroles and the like. It should also be considered as a raw material leading to five-membered cyclic structures.

With ample basic production and many years experience in Succinic (as well as Fumaric and Malic) Compounds, we welcome inquiries that may lead to wider use of these versatile chemicals. Technica data and working samples will be sent upon request.

GUIDES TO GASHOLDER PLANNING

"'Sore thumb' gas works hurt community relations . . .

How about a good-looking gasholder?"

Residents of an eastern city were aroused when word spread that a sewage digester gasholder was being planned in their neighborhood. They visualized a "sore thumb" superstructure with rigging looming high overhead, thought of property values skidding because they'd have an ugly, old-fashioned gas works as a new neighbor. Their protests posed a serious problem in community relations for the company.

The installation of a handsome, compact Wiggins Gasholder solved the problem to everybody's satisfaction. The only truly *modern* gasholder, the Wiggins gasholder is not only safe, efficient and economical but—due to its simplicity—it's also *good-looking*. *Dry* fabric seal and self-aligning piston eliminate unsightly exterior mechanisms required for other types of gasholders. For complete facts, write General American.

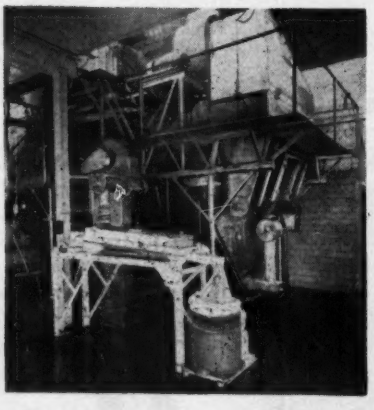
SHEFFIELD CHEMICALS—Sources of new and better products for Industry and Medicine

SHEFFIELD MILK PROTEINS

For Pharmaceuticals and Foods



High Nitrogen Casein—30 and 80 Mesh. A specially prepared casein particularly free from non-protein impurities. Used in prepared foods and dietary supplements.

Milk Protein (60%) Soluble Powder. An all-milk source powdered food containing 60% nutritious milk protein soluble in water or milk. Can be readily made into palatable drinks. Used in special diets. Excellent, concentrated source of high-quality milk protein.

Sodium Caseinate Edible Powder. A spray-dried powder, this soluble form of high-quality Sheffield casein is bland in flavor, light in color and is readily dispersible in water. The edible quality makes it particularly suitable for use in foods and pharmaceuticals, either as a concentrated source of animal protein of high biological value or for its emulsifying and foam stabilizing properties. Uniform particle size.

Calcium Caseinate Edible Powder. A water dispersible calcium salt of Sheffield casein in spray-dried form. Contains approximately 90% animal source protein of high biological value. An edible product suitable for use in foods and pharmaceuticals.

Potassium Caseinate Edible Powder. A spray-dried potassium salt of Sheffield casein, edible quality—water dispersible. Contains approximately 90% protein.

RESEARCH

New Initiators: Diazonium fluoborate in the presence of hydroquinone or ferrous ammonium sulfate is an active initiator of vinyl polymerizations. That, in essence, is the finding of chemists at University of Illinois. The Illinois researchers tested a number of substituted benzenediazonium fluoborates, found that most could bring about polymerization in the absence of activators.

•

On the Way: The first tank car of high-boiling phenol mixture from Carbide and Carbon Chemicals Co.'s coal hydrogenation pilot plant has rolled out of Institute, W. Va. Destined for resin production, the mixture contains: indanol-4; indanol-5; 3-methyl-5-ethyl phenol; *m*-propyl phenol; *p*-propyl phenol; and several other ingredients.

•

Radium Advance: Scientists of Mound Laboratory (Miamisburg, O.), operated for Atomic Energy Commission by Monsanto Chemical Co., have worked out an improved process technique of radium purification. It's called precipitation from homogeneous solution, represents a substantial advance over the Curie fractional crystallization method of separating radium from barium. According to Mound researchers, commercially pure radium can now be separated in a few days from a mixture containing only 10 parts of radium per million parts of barium.

•

Neophyte: Smith-New York Co., Inc. (Freeport, N.Y.) has just launched large-scale production of the diethyl ester of acetonedicarboxylic acid (ADA). Other esters are available in laboratory quantities. ADA takes part in all β-keto-ester reactions, is useful in the synthesis of alkaloids, pyrazalones, piperidones, and a score of symmetrical ring compounds. End use possibilities: in the production of allethrin-type insecticides; and for the preservation of certain foods.

•

Stepping Up: Antibiotics for non-medical applications are a step closer to commercial reality with the distribution of a streptomycin-terramycin formulation for field tests against orchard diseases. The product, Chas. Pfizer & Co.'s Agrimycin, will be made available (free) for the treatment of 100,000 fruit trees by March of next year. National marketing of the antibiotic combination will mark time until field test results can be evaluated.

•

Search No More: Add Research Information Service (New York) to the list of professional literature searchers. RIS will search and abstract in all branches of chemistry, is for the first time offering these services to all comers.

•

Colorful Find: Two hitherto undescribed species of *Streptomyces* have yielded a new experimental antibiotic. It's called chartreusin, after the chartreuse-colored mold from which it was extracted by a team of Upjohn Co. (Kalamazoo, Mich.) researchers. Activity of the new antibiotic is centered against gram-positive bacteria and mycobacteria.

•

Slick Trick: Chalk up the first purely chemical synthesis of sucrose to a pair of chemists representing Canada's National Research Council. They're R. Lemieux and G. Huber, who started their successful synthesis by heating tri-O-acetyl-D-glucosan with 1,3,4,6-tetra-O-acetyl-D-fructofuranose in a sealed tube at 100 C for 104 hours. The products were deacetylated and fractionated by paper chromatography. Acetylation of the fraction expected to contain sucrose, followed by fractionation and crystallization yielded sucrose octa-acetate. Deacetylation readily gave sucrose. Though a slick feat of carbohydrate chemistry, the synthesis has little practical importance.

•

No Escape: Trace quantities of sulfur compounds are easy prey to Tritilog, a new electronic instrument developed by Consolidated Engineering Corp. (Pasadena, Calif.). Capable of spotting sulfur in concentrations down to 1 part in 10 million, the device could bolster industrial safety programs, play a part in research and process control in a number of fields.

•

By-Product Out: Ketene, free of by-product, is the result of a new Celanese Chemical Corp. synthesis based on controlled pyrolysis (at 500-510 C) of acetic anhydride. Key factor: rapid separation of reaction products to prevent their recombining. Conversions vary, depending upon rate of flow, from 17% to 31% with corresponding efficiencies of 80% to 96%.

•

Nothing Wasted: Two methods of recovering sulfuric acid from phosphogypsum, by-product of wet-process phosphoric acid manufacture, are slated for pilot-plant evaluation by Tennessee Valley Authority (Wilson Dam, Ala.). Both involve heating phosphogypsum with silica to produce sulfur dioxide. The fusion process, more promising of the two,

Keys to efficient production

Frequently the keys to more efficient production are found in more reliable chemicals.

This is one reason why more and more users of chemicals are turning to Niagara.

a case in point...

NIALK CAUSTIC POTASH: The production of new and improved types of synthetic rubber requiring potash soaps has led to an increasing demand for NIALK Caustic Potash because its soaps are more soluble than comparable soda soaps, and less viscous at the same solids concentration.

Constant research, strict quality control and a knowledge of the needs of industry have made this and other NIALK products leaders in their fields.

Meet a Man from Missouri

MAYBE you're a "man from Missouri" yourself. Need to be shown *before* you'll take anyone's word. No harm in that. In fact, it's good common sense.

Well, we'd like you to see how much faster and cheaper you can reduce aldehydes and ketones with Metal Hydrides' Sodium Borohydride. This fine homogeneous free-flowing powder means fast, high-yield reductions with conventional equipment at room temperature, under normal atmospheric conditions. Get all the facts. Write today!

MH **METAL HYDRIDES**

INCORPORATED

22 CONGRESS ST., BEVERLY, MASS.

requires a third ingredient—raw phosphates. It's more elaborate than calcination, the other candidate for evaluation, but yields a phosphate slag that might serve as fertilizer.

•

Scoring on TB: Researchers of Hoffmann-La Roche, Inc. (Nutley, N.J.) are scoring significant new gains in the chemotherapeutic fight against tuberculosis. At the American Chemical Society's national meeting (Chicago) last week, Hoffmann-La Roche chemists Gardner, Wenis and Lee revealed the discovery of thioisonicotinamide, a new experimental anti-TB agent. First thioamide to show anti-TB activity, the new compound is about one half as active as isonicotinic acid hydrazide. It's too early for clinical tests.

• Also from Hoffmann-La Roche comes word of a prolific new group of tuberculostats. Researchers H. Herbert Fox and J. T. Gibas synthesized 21 alkylidene and arylalkylidene derivatives of isonicotinic acid hydrazide, found that all possessed tuberculostatic activity. The discovery opens a fertile field for potential TB drugs; scores of analogous compounds may be synthesized by simply substituting different alkylidene groupings for the hydrazide's terminal hydrogen atoms.

•

Transistor Beamed: New and better transistors and related electronic devices may eventually spring from fundamental research now under way at National Bureau of Standards. Bureau researchers are delving into semiconducting metallic compounds, have already studied such representatives as indium-antimony, gadolinium-antimony, aluminum-antimony, and cadmium-antimony. Results thus far point to the existence of a number of potentially useful compounds to augment silicon and germanium in electronic applications.

•

All Clear: North Carolina State College's (Raleigh) nuclear reactor has just started up. The reactor, ready since May, could not operate until contracts for fuel were cleared with Atomic Energy Commission (*CW, Aug. 15*). Under terms of the final agreement (to run until June 30, '54), AEC will lend fissionable material to the college for use in a program of research and instruction.

•

Concrete Goals: Ideal Cement Co. has just put the finishing touches on its new, $0.5-million research laboratories and pilot plant at Boettcher, Colo.

SPECIFY THE AMERCOAT METHOD— Designed to Give You *PLUS* PROTECTION

Ordinary methods for controlling corrosion usually produce the ordinary results—rapid paint failure, costly replacements, product contamination, excess down-time, and hampered production. Halfway measures and the use of one or two general purpose coatings simply cannot provide adequate protection against corrosion's ceaseless attack.

Amercoat gives you a proven method of corrosion control, assuring you proper protection through these PLUS features:

1. Careful analysis by a trained engineer of all the conditions present in each corrosion problem.

2. The ONE best recommendation for the particular problem. AMERCOAT is a complete line of coatings, each formulated to solve or control specific corrosion problems.

3. On-the-job assistance to your applicators and supervisors by a trained engineer. The AMERCOAT method ensures proper attention to surface preparation and application techniques for maximum protection.

4. Complete stocks of fresh materials always near you at one of AMERCOAT's five regional warehouses or more than 20 franchised distributor warehouses throughout the United States.

5. Service based on experience. The AMERCOAT method of corrosion control is the result of nearly 20 years' experience in solving or controlling corrosion problems in every major industry throughout the United States.

Write today for the name and address of the AMERCOAT representative in your area. At no obligation, he will gladly help you analyze your corrosion problems and evaluate your present control measures. If it is determined that you have a problem within our scope of experience, he will outline a complete program of AMERCOAT's PLUS protection for your plant or equipment.

Soya for Alkyds

For better drying properties, to make your alkyd resins more marketable, try A. GROSS' SOYA BEAN FATTY ACIDS in your formulation. GROCO 281—our High Iodine Value Soya Bean Fatty Acid—boasts an iodine number of 135 minimum—indicating an exceptionally high degree of unsaturation—assuring exceptional drying power.

And too, A. GROSS' SOYA BEAN FATTY ACIDS meet and exceed your demands for minimum color and chemical change under heat. So test them in your process. You'll find that they live up to the promises made for them:

- High Iodine Value for exceptional drying properties.
- Minimum color and chemical change under heat.
- Freedom from trace metals.

SPECIFICATIONS OF GROCO 281:—

Titre	23° — 27°C.

SPECIALTIES . .

Market for Sudslessness

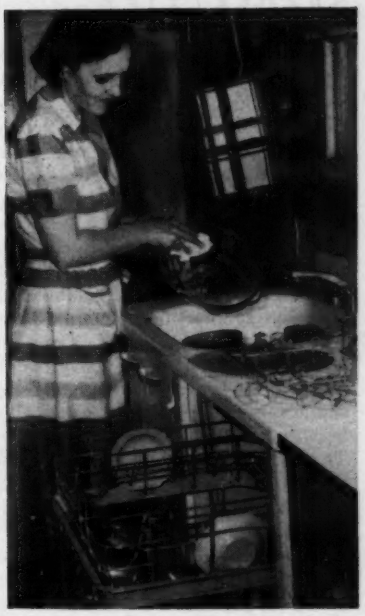
Popularity and practicality of automatic launderers and dishwashers has depended on suitable detergents—and it's a two-way street, for low-foaming synthetic detergents have also enjoyed steadily rising sales.

The growing market has caught the eye of more than one major soaper—P&G recently trademarked the name Duz-O-Matic (it declares that it is not contemplating marketing any sudsless detergent immediately, however), and one of soap's Big Three may offer a Pluronic low-foam detergent next year. Still another indicates it may offer such a product soon.

Consumption of the low-foamers is still small compared with that of more versatile heavy-duty products, but the potential market is good: the past five years have seen better than 8 million automatic washers installed in American homes; and for the first time, last year's sale of automatics exceeded that of conventional machines. Further potential is added by home automatic dishwashers. McGraw-Hill's *Electrical Merchandising* estimates that there are only 1,253,000 machines now in homes, but chances are that the slow-moving dishwashers will be in for extra-heavy promotion in coming years.

One leading producer of detergents figures that an automatic washer will use about 45 lbs. of its product per year. Multiply that by 8 million, and a potential is reached that is almost a quarter of current yearly synthetic detergent sales. Add to this the requirements of dishwashers—about 8.8 lbs./year—and you have a plump market indeed. It is plain, however, that current sales of the sudsless detergents are only a fraction of this.

Shelf-full: The housewife has a pretty wide choice of products for her automatic washer. The heavy-duty synthetic detergents, such as Tide and its competitors, are frequently employed, and in spite of the fact that they are not particularly formulated for automatics, they appear to give generally satisfactory service.



Of the detergents specifically worked out for automatic washing machines, the most commonly known is All, made by Detergents Inc. (a Monsanto-owned corporation), Columbus, O. It was created by Monsanto about 1947, when the automatics were making their first real impact, and was designed to meet requirements of "horizontal" machines like the Bendix and Westinghouse Laundromat.

Representative of the many other products sold for washers are Fun, made by Economics Laboratory (St. Paul, Minn.); Spin, by Climalene Co. (Canton, O.); Onlywun, by Wetalene Laboratories; and Favady W-701, by Barton Chemical Co. (Chicago).

The dollar value or poundage of these is not available, but competitive sources indicate that 60-70,000 tons of All are moved yearly, and it is the firmly established leader in the field.

LABOR-SAVERS: De-emphasis on suds for 8 million washers.

DISHWASHERS means a burgeoning market for specialized detergents.

No Shortage Here: There is as wide or wider a selection of detergents for use in dishwashers. Most of these are powders, such as Calgon Inc.'s Calgonite (introduced in 1934) and Thanx; Economic Laboratory's Soilax, Electrasol, and heavy-duty Finish; Barton Chemical's Favady D-36; and Wyandotte's Salute. In addition, some of the washer detergents are suggested for dishwashers.

Antara Chemicals, division of General Aniline & Film Corp., introduced its liquid synthetic detergent Chat in 1948. Sold principally in quart cans, the liquid is most frequently dispensed from a small brass cup, which is inserted in the washbasket. Antara isn't hiding the fact that it would like to get this growing baby off its lap and into the hands of a firm better equipped to sell retail—as it did with its other dishwasher, Glim.

Holding the Head Down: Several formulations have been worked out to give restricted sudsing products. Nonionics are particularly useful—All is such a nonionic, formulated of Monsanto's Sterox AWS, which is a built polyoxyethylene ester. Climalene's Spin is a similar nonionic made with one of the Sterox series.

Wyandotte suggests its nonionic Pluronics for low sudsing-detergents. A typical product would contain 10-15% Pluronic, 2-5% alkyl aryl sulfonate, 20-30% tripolyphosphate, 2-3% carboxymethylcellulose, 5-10% metasilicates, with other alkaline products. Another suggested product can be made of fatty acid sulfates, tripoly and other phosphates, plus a nonionic like Sterox.

For firms that simply want to package a low-sudsing detergent, Blockson Chemical Co. (Joliet, Ill.) offers Teox–tripoly, silicates and ethylene oxide condensate of tall oil. Other nonionic manufacturers, of course, suggest formulations making use of their own products.

China Specials: There is considerable variation in composition of dishwashing compounds. Calgonite is essentially sodium hexametaphosphate with complex phosphates. Considerable interest has been shown lately in products based on chlorinated trisodium phosphate, along with alkalies and polyphosphates (example: Thanx). But generally speaking, sodium tripolyphosphate, sodium metasilicates, soda ash and the like comprise the common product.

Antara's Chat is a low-sudsing compound based on an anionic detergent–its Igepon CN-42, which is an alkyl amide sulfonate. It, too, is built with phosphates and silicates.

Suds or Not: Selling the housewife on the value of low-sudsing compounds hasn't been achieved easily. She seems to count on suds as a measure of the effectiveness of her laundering solution, and in hand dishwashing in particular, suds are synonymous in her mind with a successful product.

Illustrative was the change in Glim formulation to make more suds–evidently the housewife demanded the sparkling white blanket of suds to conceal the dirty gray dishwater below.

Suds, nevertheless, can be a serious drawback in automatic labor-savers. They can flood certain types of washing machines, and they provide a cushioning effect in dishwashers that seriously interferes with cleansing action.

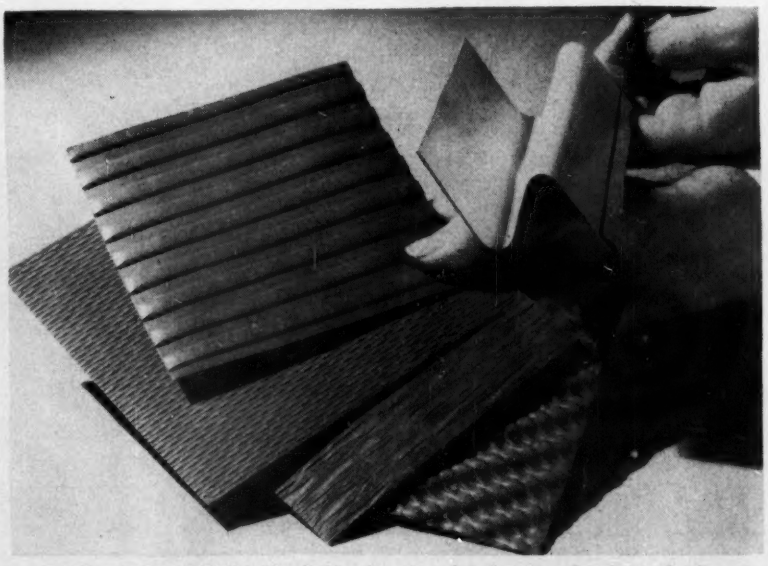
But suds have been promoted so vigorously in recent years that at least one firm has given up on trying to sell its low-suds detergent.

The cost of establishing a new detergent is high enough as it is; to buck the pitch of major soapers can be discouraging indeed. All, however, is in the fortunate position of being recommended by the makers of a number of automatic machine makers.

Happily for makers of low-sudsing detergents, zealous appliance salesmen know that only the proper detergents will give them satisfied customers, and hence they recommend low-suds products. And promotion will hit high gear if and when the Big Three soapers decide that the market is plump and tempting enough for them to step in–very possibly in the near future.

PARSEKIAN, KIERNAN, RUEBENSAAL: On the laminate team.

Laminate Unlimited

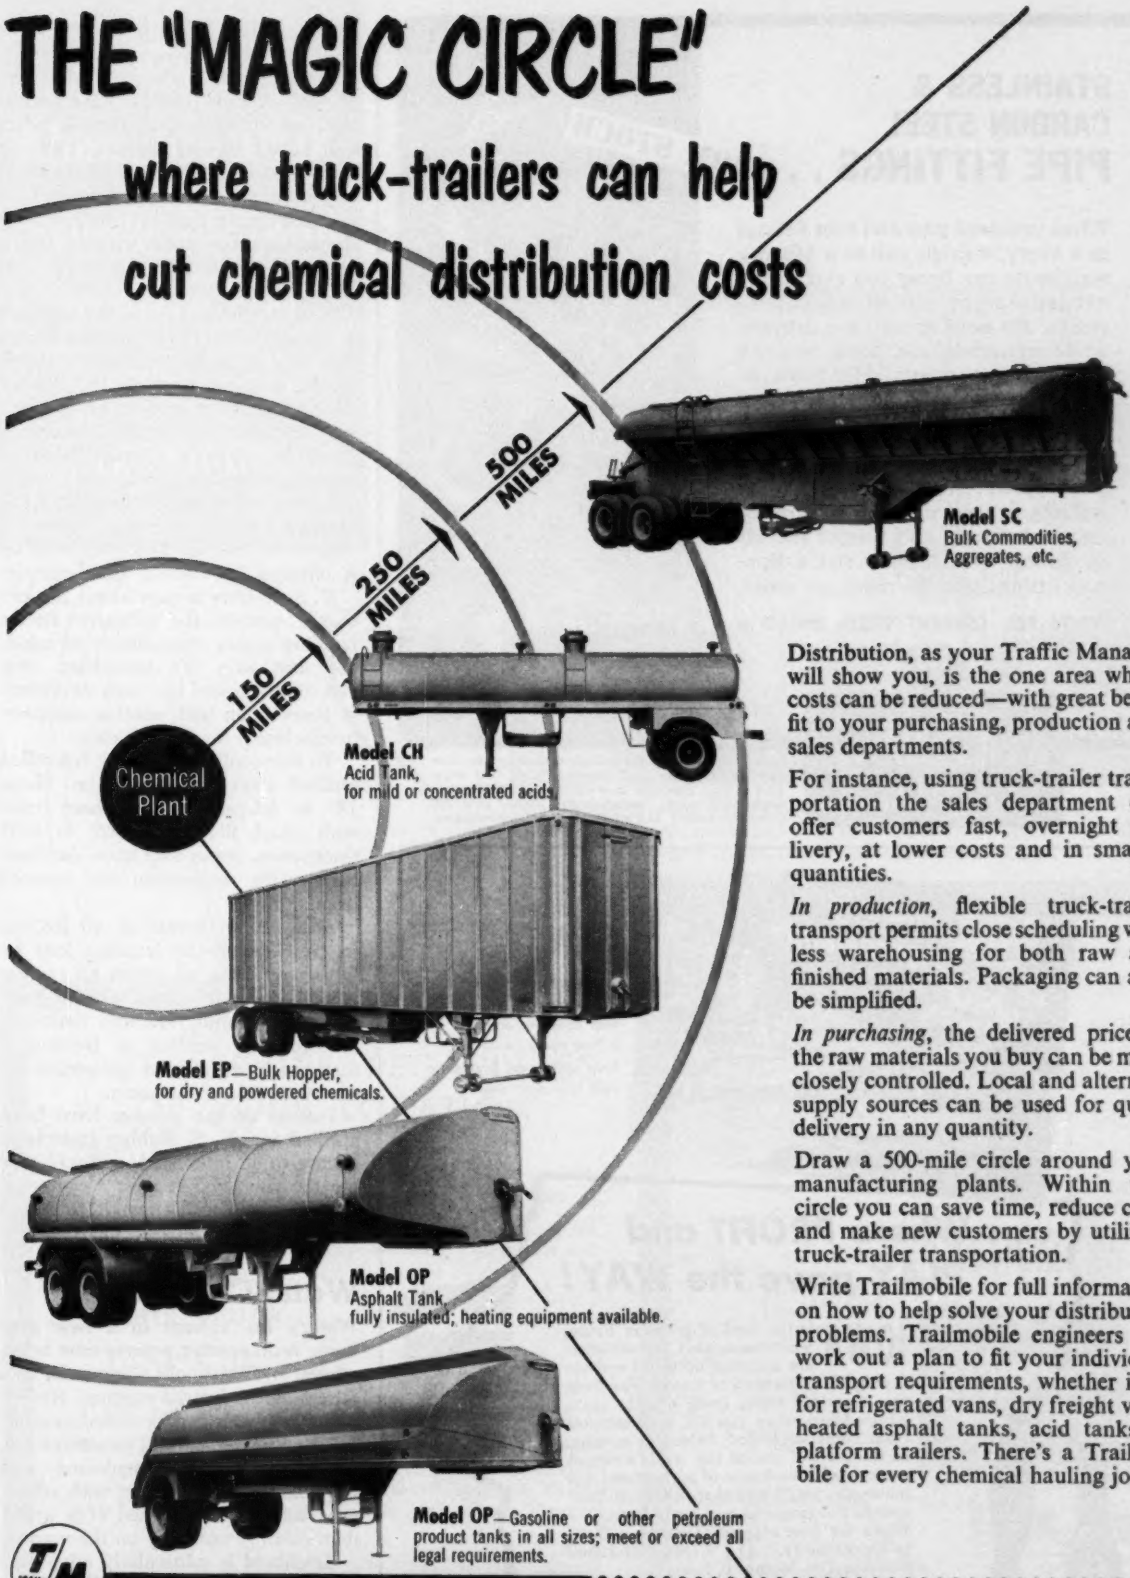


Bonding vinyl plastic and metal sheeting in a new process, U.S. Rubber Co.'s Naugatuck Chemical Div. has come up with a decorative, permanently rust- and corrosion-proof laminate.

The new process combines the structural strength of metal–steel and aluminum has received most attention–with the colors and corrosion resistance of vinyl plastic.

Marvinol-Metal Laminate, as U. S. Rubber tags the new product, is suggested for a host of items: weatherproof building siding, interior paneling, lawn furniture, office and industrial machine housing, inexpensive corrosion - resistant containers for chemicals, chemical piping and ducting (some laminate ducting has carried sulfuric and nitric acid fumes for a year without deterioration), counter tops, and office furniture, to name a few.

Particularly instrumental in getting the new laminations ready for the market were plastics sales manager Harold Parsekian, Conleth Kiernan of the development department, and William Fischer and Clayton Ruebensaal of the commercial products department. They've managed to get samples out to a variety of firms for testing and evaluation.



More than 20 firms have already shown interest in the laminate–and

FLEXIBILITY SHOW: Vinyl grips in spite of embossing, drawing, crimping.

THE "MAGIC CIRCLE"

where truck-trailers can help cut chemical distribution costs

Distribution, as your Traffic Manager will show you, is the one area where costs can be reduced—with great benefit to your purchasing, production and sales departments.

For instance, using truck-trailer transportation the sales department can offer customers fast, overnight delivery, at lower costs and in smaller quantities.

In production, flexible truck-trailer transport permits close scheduling with less warehousing for both raw and finished materials. Packaging can also be simplified.

In purchasing, the delivered price of the raw materials you buy can be more closely controlled. Local and alternate supply sources can be used for quick delivery in any quantity.

Draw a 500-mile circle around your manufacturing plants. Within that circle you can save time, reduce costs and make new customers by utilizing truck-trailer transportation.

Write Trailmobile for full information on how to help solve your distribution problems. Trailmobile engineers will work out a plan to fit your individual transport requirements, whether it be for refrigerated vans, dry freight vans, heated asphalt tanks, acid tanks or platform trailers. There's a Trailmobile for every chemical hauling job.

NEW

You are invited to send for your copy of the beautiful new brochure on Iowa. It has many interesting facts you'll need to select your next plant site.

. . . Where PROFIT and PLAY pave the WAY!

IOWA is the land of gracious living, where more alert industrialists are stepping up profit and enjoying life in the land of plenty. Far from the congested areas, Iowa affords more leisure hours when you are brief minutes from home, work, golf, fishing or hunting. In the heart of one of the world's richest markets and the source of agricultural raw materials, you'll find that it's good business to live longer in wonderful Iowa.
Write for your copy of "Industry's Road to Opportunity." 414 Central National Building, Des Moines 9, Iowa.

IOWA DEVELOPMENT COMMISSION

the interest is understandable. The bonded-on vinyl is said to have greater abrasion resistance than varnish, paint, and baked enamel finishes. Fully as important, the adherence of the vinyl to plastic is so strong that crimp rolls and 180-degree bends, as well as deep draws, can be made without separating the plastic from the metal (*see cut*).

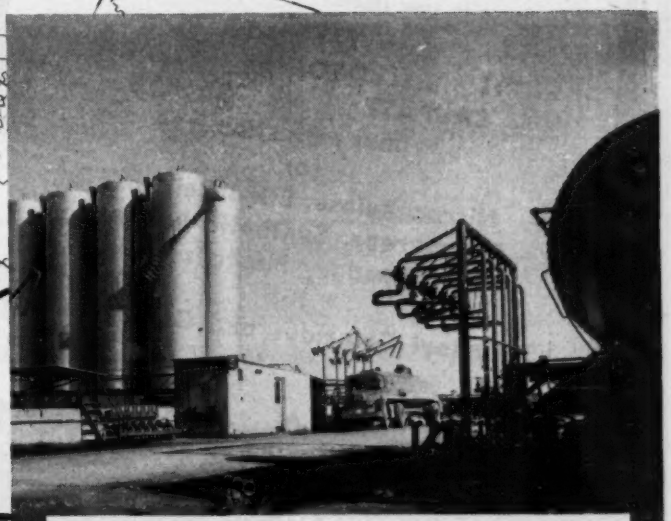
Simple, Cheap: Cost of the laminate is higher than that of galvanized iron, but only a third that of comparable gauge stainless steel, U. S. Rubber declares. And the process, easily adapted to high-speed production equipment, is relatively simple. Rigid or semi-rigid vinyl is rolled onto heated, adhesive-coated metal sheet. After application, at low pressures (approximately 50 lbs./sq. in.), the bonding is effected by heating the laminate.

U. S. Rubber is cagy about the key to the process–the adhesive. Redux bonding comes immediately to mind; the firm says it's something new and different, and has been developed in cooperation with another company (undisclosed) for this use only.

To date, cold-rolled steel, hot-rolled pickled steel and aluminum (from 18- to 34-gauge) have been used with vinyl films in 0.002 to 0.02 thicknesses. Some tests have also been made with magnesium and pressed wood.

Adhesion in excess of 40 lbs./sq. in. is claimed–the laminate can be fabricated with all types of regular metal forming machines without damage to the coating. The only limitation in soldering, welding or brazing is that the coating must be peeled off on either side of the seam.

Patents on the process have been applied for; U. S. Rubber intends to license to all interested, and will supply the vinyl and suggest a source of the adhesive.



Water-Carried Coat

Water's the solvent in a new synthetic resin coating process now being offered by Reichhold Chemicals, Inc. Strictly an industrial coating, Hydrophen, as it's termed, is touted as eliminating fire hazard and expensive solvent recovery equipment–and still providing a hard coating with adherence and durability equal to or better than coatings currently on the market.

Reichhold is particularly aiming at the automobile market, where close to 0.5 million autos a month * gobble

*First-two-weeks-of-August production was more than 240,000 passenger cars, according to *Automotive News*.

up about three and a half gallons (one and a half primer, the rest finish) of coatings apiece. But farm machinery makers and other producers of durable metal goods will be scrutinizing the product, too.

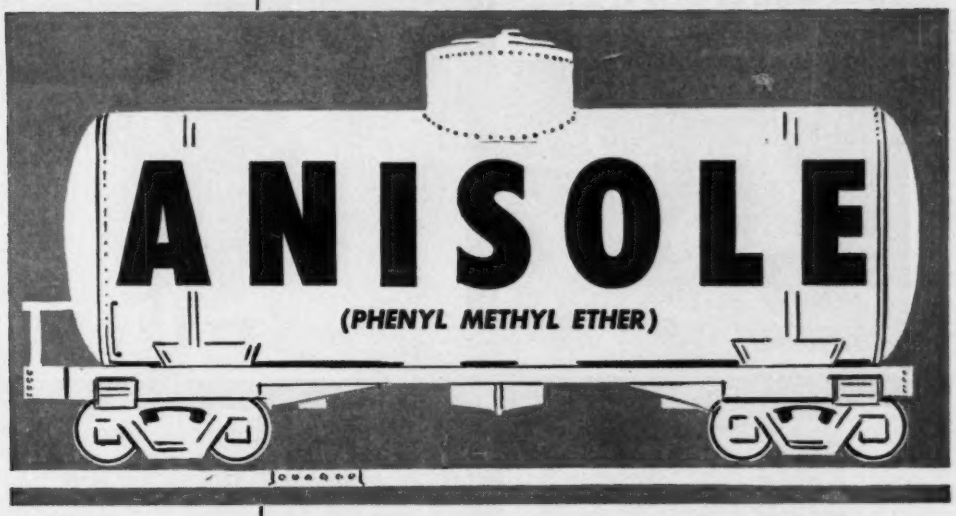
No price has been quoted for the new resin, but it's claimed to permit manufacturers savings of 10-25% on finished coating costs.

Three Part Skin: The coating compound was developed by Herbert Hoenel, at Vianova Corp., Graz, Austria. This firm, associated with Reichhold, will produce the resins for European consumption.

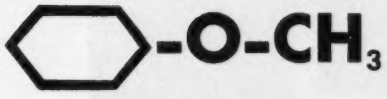
The film-former is described as consisting of a phenol alcohol (for hardness, abrasion resistance), an alkyd resin (for flexibility), and ammonia or an amine, which reacts with the alkyd component to make the material completely water-soluble.

Water-soluble resins of this sort are not entirely new: some 20 years ago several American firms toyed with them, but without noteworthy success. Now, in addition to Reichhold, it appears that at least two other firms have renewed their interest.

Reichhold admits to several limitations in the present product — limitations it hopes to eliminate "within months." Current Hydrophen resins are clear but dark in color, won't produce a light-colored film. Considerable care must be taken in surface preparation to assure thorough wetting by the coating. (Auto bodies undergo ideal prepainting treatment, although the usual Bonderizing is unnecessary, company spokesmen said.



Drying time is not long: a 15- to 30-minute bake at roughly 300 F does the trick. The finished film has shown extreme resistance to moisture, as well as flexibility and adherence.



Coming Up: Reichhold has several other modifications on water-soluble resin coatings up its sleeve. Still under development are melamine-urea resins that will premit lighter-toned films. On the import list are some special spray nozzles designed for on-the-spot application. These nozzles feature an orifice ringed with flame—the heat at the tip starts polymerization.

Current production will be confined to Reichhold's Detroit plant, though at least two other plants have facilities readily convertible to manufacture of the new coatings.

It's hardly likely that Reichhold has caught the rest of the industry entirely by surprise, but it looks as though it has stolen a march on the others. And for a sharply competitive firm like Reichhold, that march might win a battle.

Now from Du Pont in tank car lots—

IMPORTANT PROPERTIES OF

ANISOLE

Appearance	a light straw-colored liquid
Molecular Weight	108.13
Specific Gravity 18°/4°C.	0.996
Melting Point	-37.3°C.
Boiling Point, 760 mm	153.8°C.
Specific Heat, 24°C.	0.422

GRASSELLI CHEMICALS

FOR INDUSTRY INCLUDE:

Chlorosulfonic Acid	Aluminum Chloride
C. P. Reagents	Aluminum Sulphate (I. F.)
Formic Acid	Sodium Metasilicate
Lactic Acid	Sodium Silicate
Muriatic Acid	Sodium Thiosulfate
Nitric Acid	Zinc Chloride
Sulfuric Acid	

Put this high boiling ether to work for you!

AS AN INTERMEDIATE—Anisole is a reactive intermediate. It is readily alkylated or acylated under mild conditions, and undergoes Friedel Crafts reactions with a wide range of compounds. Halogenations and nitrations are similar to those of phenol. The wide range of Anisole derivatives finds use in such fields as pharmaceuticals, perfumes, plastics and dyestuffs; and includes, to mention a few examples, anethole, p-anisidine, anisaldehyde, p-methoxy benzene sulfonamide, p-methoxy acetophenone, and anisic acid.

AS A SOLVENT—A stable high boiling ether, Anisole is ideally suited as a reaction medium and recrystallization solvent. Its value in such applications is enhanced by its resistance to peroxide formation and Grignard reagents, and its action as a mildly catalytic solvent for acid forming reactions, where it acts as a Lewis base. Water immiscible, Anisole is completely miscible with most organic solvents and is itself an effective solvent for a wide range of organic materials.

AS A HEAT TRANSFER MEDIUM—Anisole has found use as a special heat transfer medium for temperatures in the 150 to 260°C. range due to its outstanding high temperature stability, water immiscibility, high boiling point, and high flash point. Its wide liquid range, low viscosity and comparatively high density suggest its utility as a liquid medium at lower temperatures.

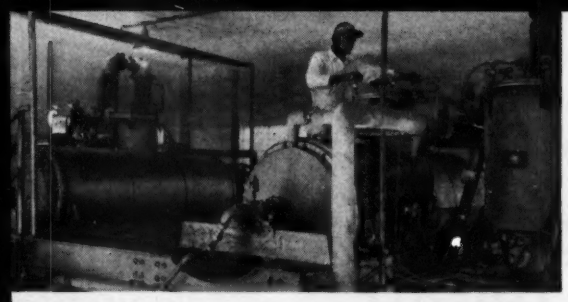
Operator transfers evacuated retort from heating to cooling station of Stokes Vacuum Annealing Furnace, designed and built for the processing, annealing and other heat treatment of titanium, zirconium, hafnium, copper and other metals.



One of the uses for the complete custom-built installation of Stokes vacuum freeze-drying equipment in Pitman-Moore Company's new million-dollar plant at Indianapolis, Ind. is to produce gamma globulin to combat poliomyelitis. One of the steps is drying the material from its frozen state. Operators are shown removing trays of gamma globulin from Stokes freeze-dryers. Temperatures are as low as 40° below zero F. during part of the freeze-drying cycle.

Diesel locomotive armature being removed, after impregnation, from Stokes high vacuum impregnating tank in the San Bernardino, Calif., plant of Atchison, Topeka & Santa Fe Railway. Electric motors for the Santa Fe's "Chief" and "Super Chief" develop such excessive heat that ordinary insulation would swell or burst, causing the rotors to "freeze" in the mounting. By impregnating these rotors with protective resins under high vacuum in Stokes impregnators, each turn of wire is held in place, motors operate without interruption.

Installation of Stokes Rotary Vacuum Dryers used by Metals Disintegrating Co., Berkeley, California, for drying of aluminum powder. Highly oxidizable materials can be handled without any danger of combustion or explosion when they are processed under vacuum.

Vacuum at Work

Diesel locomotive motors, paper and metals, medicines, electrical parts, toys . . . are but a few in a wide range of products which are processed in vacuum for the good of mankind and the profit of business.

The application of vacuum engineering to industry is a major function with Stokes engineers. And naturally so, for it is at Stokes' that many of today's accepted procedures of vacuum processing had their inception during the last fifty years.

Stokes is FIRST in Vacuum . . . *first* in the design and manufacture of practical vacuum processing equipment . . . and Stokes engineers are available for consultation on opportunities to apply vacuum processing to your business.

STOKES MAKES: High Vacuum Equipment, Vacuum Pumps and Gages / Industrial Tabletting, Powder Metal and Plastics Molding Presses / Pharmaceutical Equipment

10 SUPERIOR SULFRAMIN* FORMULATIONS TO MEET YOUR EXACT PROCESSING REQUIREMENTS

TRY ULTRA'S ALKYL ARYL SULFONATES UNDER OPERATING CONDITIONS IN YOUR PLANT

SULFRAMIN* AB-40 FLAKES
Excellent foam stability, especially at high pH. Very low in dust and odor. Outstanding wetting.

SULFRAMIN* AB-40 BEADS
A neutral synthetic organic detergent, wetting and emulsifying agent of the sodium alkyl aryl sulfonate 40% active type.

SULFRAMIN* HD BEADS
An alkyl aryl sulfonate in spray dried form blended with complex phosphates and organic chemicals for HIGH DETERGENT value.

SULFRAMIN* L
This new, chemically different synthetic, in gel form, offers unusual foam stability and excellent detergency.

SULFRAMIN* AB-CONCENTRATE FLAKES
80-85% active organic material. For blending where high active is required in finished product. Density, .3.

SULFRAMIN* KE LIQUID
Clear amber liquid. 25% active 3% sulfate. Excellent for compounding. Can be tailored to meet your requirements.

SULFRAMIN* AB-CONCENTRATE POWDER
Density, 0.4–0.45. Easy to perfume due to low odor. Low in dust content. Excellent money value.

SULFRAMIN* E LIQUID
Modified alkyl aryl liquid. 25% active. Unusual hard-water resistance and low end-point performance.

SULFRAMIN* AB SLURRY
Alkanes sulfonated to meet your specifications under rigid control. Tank cars and tank trucks only.

SULFRAMIN* AB-40 POWDER
Excellent detergency. Light in color. Less than 1% moisture. Screened, not ground, low in fines.

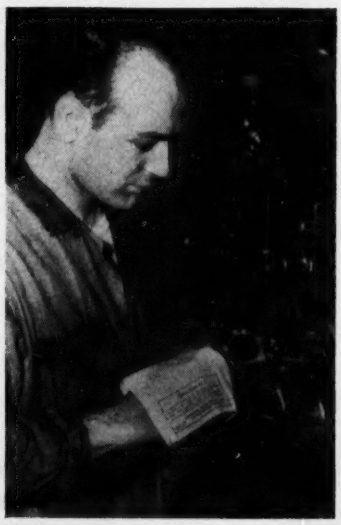
SPECIALTIES . . . .

Now Detergents: Leeds Soaps Ltd. (Toronto) has recently gone into synthetic detergent manufacture, and is now selling sodium lauryl sulfate, cetyloleyl sulfate, dodecylbenzene sulfonates, and emulsifiers.



•

Add Three: Nopco Chemical Co. (Harrison, N.J.) is now producing three new polyamide-type resins said to be suitable for solvent and hot-melt application as decorative, heat-, solvent-, and vapor-proof coatings.

Called the Nopcote Series, their numbers indicate the Centigrade softening points: Nopcote 45, 105, and 190 are now offered. They are said to be resistant to strong alkalies, mild acid, and hydrocarbon solvents; higher alcohols are primary solvents.

•

Two in One: Brown Paint Co. and Brown Solvents Corp., Charlotte, N. C., have just jointly occupied a new plant. The new facilities include offices, mixing rooms, and warehousing space, occupy 7,000 sq. ft.

Man of Vision

BY WIPING his goggles with a recently introduced chemically treated cloth, this worker won't be troubled with misting glasses. So claims Hygiene Research, Inc. (New York). The firm is now making its Seecloth available to industry in both 8-in. x 9-in. pieces or by the yard. Hygiene says the cloths, which can be reused a number of times, will keep glasses mist-free for hours under severest conditions.

For complete satisfaction, install POWELL VALVES

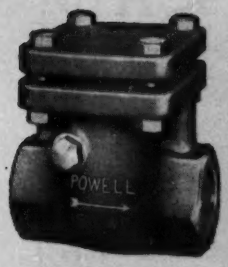


Fig. 2341—Stainless Steel Swing Check Valve for 150 pounds W.P. at 500F. Also available in other corrosion-resisting metals and alloys and with flanged ends.

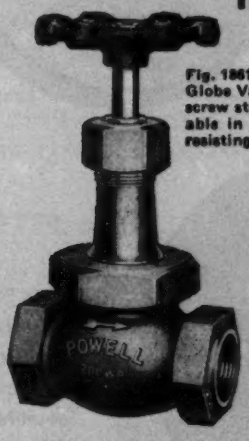
To be completely satisfactory, a valve must function perfectly, give maximum length of service and require minimum maintenance. To do this it has to be exactly right—in design and materials—for all the conditions under which it must operate. And because Powell makes just such a valve for every service in modern industry, Powell Valves always give complete satisfaction.

The Wm. Powell Co., Cincinnati 22, Ohio



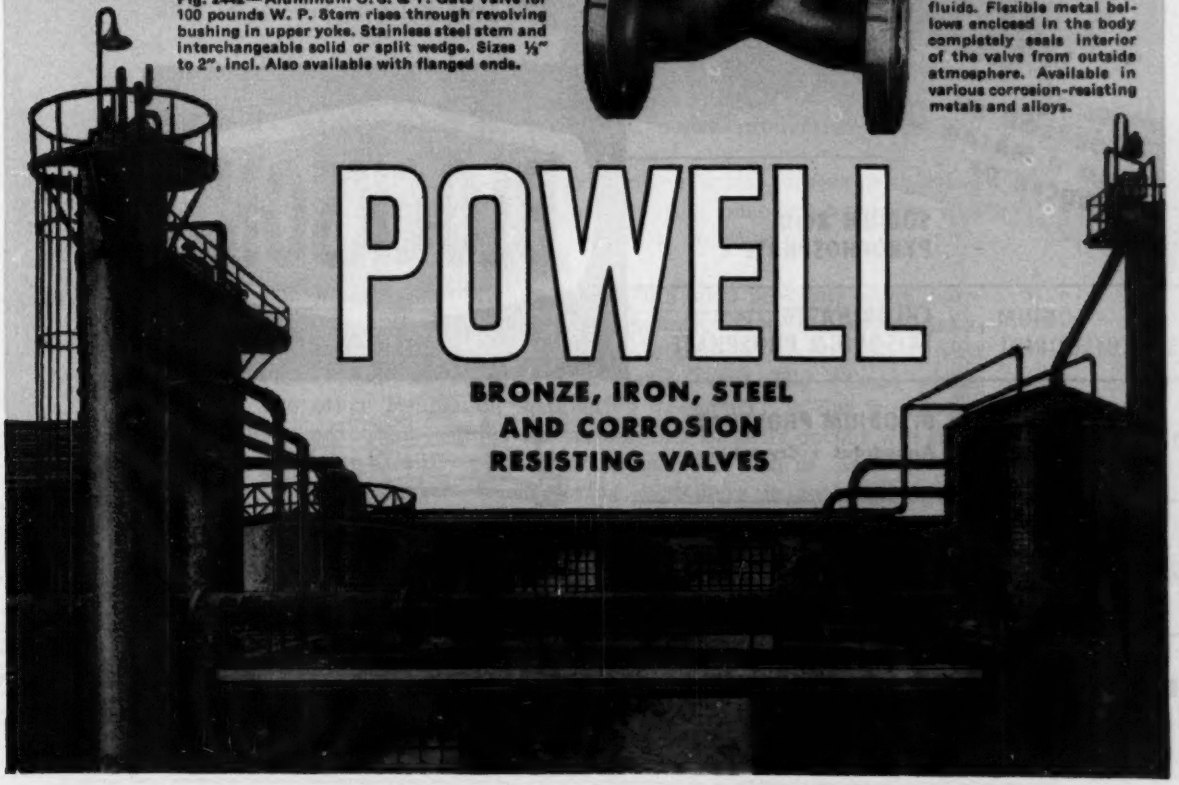


Fig. 1861 — 200-pound Stainless Steel Globe Valve with union bonnet, inside screw stem and plug type disc. Available in a variety of other corrosion-resisting metals and alloys.

DEPENDABLE VALVES SINCE 1846

BELLOSEAL "Y" Valve—For high vacuum service and for handling hazardous, lethal or malodorous fluids. Flexible metal bellows enclosed in the body completely seals interior of the valve from outside atmosphere. Available in various corrosion-resisting metals and alloys.

Fig. 2442—Aluminum O. S. & Y. Gate Valve for 100 pounds W. P. Stem rises through revolving bushing in upper yoke. Stainless steel stem and interchangeable solid or split wedge. Sizes ⅛" to 2", incl. Also available with flanged ends.

CW Price Index—Basis: Weekly Prices of Sixteen Selected Chemicals

MARKET LETTER

By this week market-place activity can be summed up in one word: inceptive. Most chemical makers have already slipped into fall production schedules; consumers are tentatively figuring last quarter needs.

There's a dearth of basic price changes, though, as sellers peg their confidence on buyers' understanding of the reasons behind most of the earlier hikes.

On the other hand, some marketers aren't convinced that price altering is over, envision some significant changes in the near future.

•

Behind this thinking may be better supply positions on many not-too-long-ago tight items. Take phthalic anhydride, for instance. Although the market is still far from soft, added production is rapidly closing the supply-demand gap.

Some producers have whittled backlog orders, others are getting some cancellations. The latter are mainly from once-uneasy users who doubled up orderings to assure themselves of supplies.

•

And polyethylene producers, too, will soon be filling some near-dry consumer pipelines. First commercial quantity from big maker Bakelite's ambitious expansion program will be hitting the market within two months. That's from its 50 million lbs./year Texas City (Tex.) plant.

The other Panhandle installation (Seadrift) is due in around the middle of next year. A third (60 million lb.) Bakelite output will come from its Torrance (Calif.) plant starting near the end of '54.

Of equal interest to clamoring customers is speculation concerning polyethylene prices. A few months ago, Bakelite chopped its price down to the current 44¢/lb. (truckload).

A good guess: basic polyethylene prices may head down into the 30s—in the not-too-distant future.

•

A tripling para xylene output from Standard Oil of California's new El Segundo plant is just beginning to ease pinched domestic users. The unit—part of a multimillion-dollar petrochemical expansion at the

MARKET LETTER

WEEKLY BUSINESS INDICATORS	Latest Week	Preceding Week	Year Ago
CHEMICAL WEEK Output Index (1947=100)	126.2	126.0	122.8
CHEMICAL WEEK Wholesale Price Index (1947=100)	104.9	104.8	102.3
Bituminous Coal Production (daily average, 1000 tons)	1,594.0	1,624.0	1,840.0
Steel Ingot Production	2,036.0	2,011.0	2,121.0
Stock Price Index of 13 Chemical Companies (Standard & Poor's Corp.)	1,594.0	1,624.0	1,840.0

MONTHLY INDICATORS—Wholesale Prices (Index 1947-1949=100)	Latest Month	Preceding Month	Year Ago
All Commodities (Other than Farm and Foods)	114.8	114.8	113.0
Chemicals and Allied Products	106.3	106.2	104.0
Industrial Chemicals	120.2	120.2	114.6
Drugs and Pharmaceuticals	93.5	93.6	92.1
Fertilizer Materials	113.8	113.8	110.9
Oils and Fats	46.2	46.7	47.5

California refinery—is now making commercial shipments some seven months ahead of schedule.

There's little or no worry over a slackening of para-xylene consumption. Reason: It's the chief raw material for synthetic fibers like DuPont's "Dacron"; and despite the general pummeling many synthetics are taking, Dacron continues to hold high favor with consumers; the trade labels it the fiber most likely to survive.

•

There's a lot more iso-phthalic acid (IPA) on the way. But the when and where of big-scale production is still moot. Oronite Chemical's recent $4/lb. slash for developmental quantities sparked speculation of a multimillion-dollar, multimillion-pound plant in the offing (CW, Aug. 29).

Although final decision for the plant site hasn't been made, the projected installation will cost about $10 million, have a near-50 million lbs./year capacity.

IPA will buck phthalic anhydride, use-wise, but it's a far-in-the-future question whether iso's production price will match, undercut or exceed phthalic's current 22¢.

•

Some gum—as well as wood—rosin users, however, are paying more this week. A firmer trend in Southern markets nudged gum prices here about 5¢/cwt. In all but Nancy-grade schedules.

With the fall season starting and chillier weather cutting into production, chances are the present hike will not be the last.

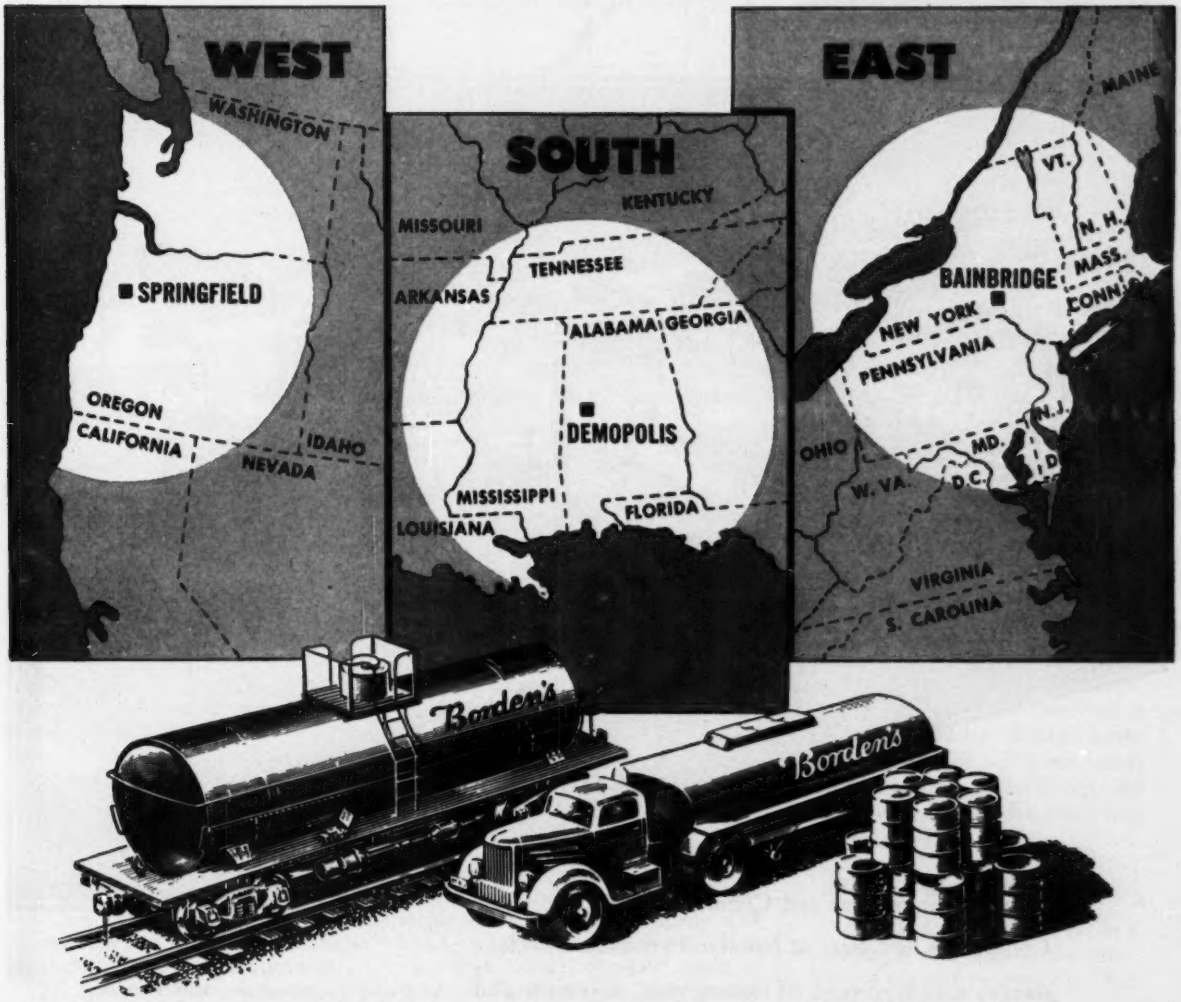
Observers, also eyeing turpentine's brisker movement, won't be too surprised if that material heads for a higher price level. Some see it happening within a week or two.

•

Behind the announcement last week that Continental Oil will market a new Conoco Super gasoline containing TCP acceptance (CW, June 20). Sales, says Shell now, "exceed all expectations."

The licensing agreement with Continental will just about blanket the country with TCP-added gas outlets, will more than likely pressure TCP makers to up production. Near-view result: greater squeeze on cresylic acid.

SELECTED CHEMICAL MARKET PRICE CHANGES—Week Ending September 14, 1953



UP

	Change	New Price		Change	New Price

All prices per pound unless quantity is stated.

Borden's FORMALDEHYDE

now available from these 3 "next door" plants:

Look up "Borden's" next time you need formaldehyde.

If you're inside one of the 300-mile circles shown above, Borden's can probably deliver your formaldehyde by tank truck. Fast service and frequent service, so that you don't need large storage tanks.

If you're outside the circles, get Borden's prices on tank car (6,000-gallon "Split cars,"—8,000 or 10,000-gallon full cars) and drum shipments.

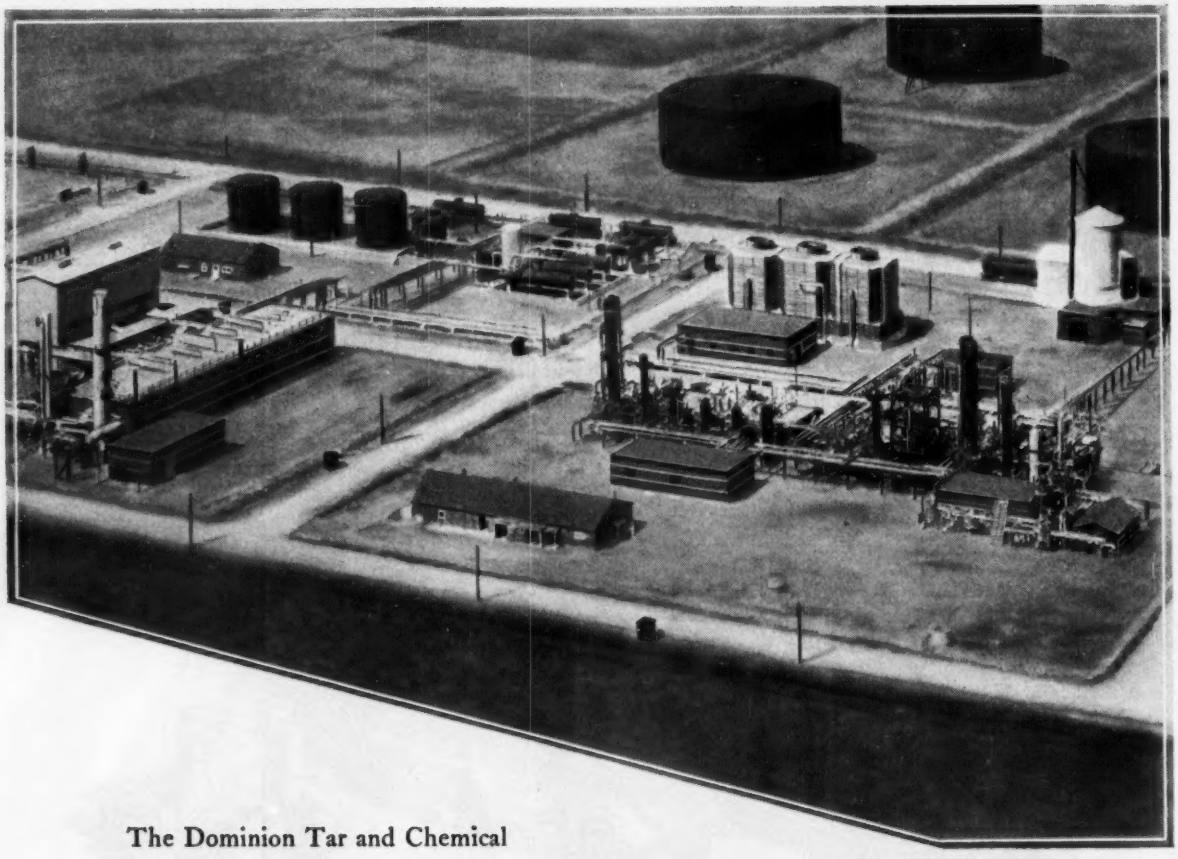
TYPES AVAILABLE:

37% inhibited (also known as "Formalin," "U.S.P." or "N.F." formaldehyde). Shipped in tank cars, tank trucks, drums.

37% uninhibited. Shipped in tank cars or tank trucks.

44% inhibited or uninhibited. (Shipped in tank cars or tank trucks from Bainbridge, N.Y. or Demopolis, Alabama only.)

Borden's formaldehyde is made in completely modern, automatic equipment that assures uniformity of quality and trouble-free formulating in your plant. It's made to meet your specifications for acidity, methanol content, etc.



Write, wire or phone for a quotation. Address: *The Borden Company, Chemical Division. 350 Madison Avenue, Dept. CW-93, New York 17, N.Y.* H.3.1

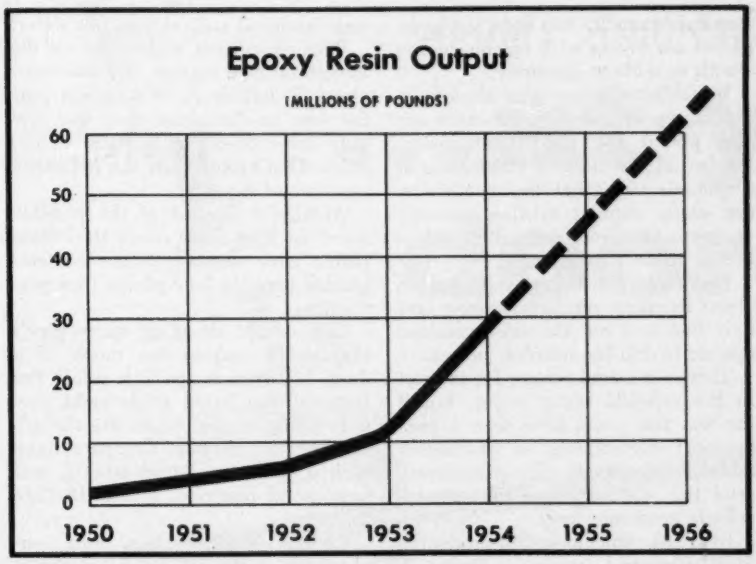
FORMALDEHYDE • HEXAMETHYLENETETRAMINE • RESORCIN • CASEIN
UREA RESINS • PHENOLIC RESINS • POLYVINYL RESINS • EPOXY RESINS

Chemicals FOR A FAST GROWING REGION

The Dominion Tar and Chemical Company's new plant at Montreal produces ethylene oxide, a component of detergents, solvents and plastics; and glycol, basic chemical in permanent type anti-freeze, explosives and synthetic fibers.



Design and construction of the plant, which has an estimated capacity of 25 million pounds of glycol per year, were by Stone & Webster Canada Limited, utilizing the facilities of Badger Process Division of Stone & Webster Engineering Corporation.

At this plant, located near the St. Lawrence River, Dominion Tar and Chemical Company extracts ethylene from gas piped from nearby refineries, converts it to form ethylene oxide and glycol, and returns the unused gas for further processing.

STONE & WEBSTER ENGINEERING CORPORATION

AFFILIATED WITH STONE & WEBSTER CANADA LIMITED

E. B. BADGER & SONS LIMITED

NEW EPOXY USES spark a stratospheric climb despite a high-price ballast.

Epoxies on the Ascent

The "wonder" appellation may be doing yeoman service in other chemical process industries (fibers, fabrics and pharmaceuticals), but if current—and possibly future—ethoxylene resin boosters have their way the tag will also be firmly attached to the whole line of epoxy resins.

From comparative obscurity during the mid-'40s, when they were under development,* these particular resins have by today

- moved close to the top of the anticorrosive coating field,
- cut a brilliant swath through the adhesive industry,
- undergone a near-24-fold increase in supply availability in less than six years.

And the end is not in sight, either in outlet or in output burgeoning.

To take the latter first, top U.S. producer, Shell Chemical, is scheduled to triple production capacity by the end of the year at its spanking-new Houston (Tex.) Epon-producing plant. Rate there now is about 5 million lbs./year. (Shell is also erecting a plant in Holland for production of its Epikote, other epoxy raw materials.)

And Ciba, as reported in CW (*Market Letter, Aug. 22*), has about completed a capacity doubling (to approximately 6 million lbs.) at its Kimberton (Pa.) installation.

These expansions could contribute an additional 13 million lbs. of epoxies a year to the market within a short time.

Somewhat more nebulous but already formulated are plans for Bakelite's ambitious production hike from its present 1-million-lb. rate. The company was recently granted a $360,000 certificate of necessity—with a 50% write-off—that could mean a future 6 million lbs./year capacity. One underlining factor, for the 6 million figure is this: the Union Carbide division won't have to start building from scratch. It has some existing capacity.

Definitely in the realm of speculation is the possibility that Dow may also step into the epoxy resin field. A one-plus-one-equals-two reasoning adds up some recent Dow moves to bolster a logical conclusion. For example, news that the company will build a synthetic glycerine plant (Freeport, Tex.), possibly using a similar-to-Shell process, likely means co-production of epichlorhydrin, one epoxy resin ingredient.

Another firming factor hopped on by side-line observers: Dow's recent $950,000 bisphenol certificate. That could provide the other necessary component.

Dow insists that at the time of the glycerine-making decision, no definite plans for epoxy production were considered, but it doesn't deny that an epoxy resin venture might be desirable in view of its setup.

Crowd's Coming: There's no doubt that all angles on epoxies have been—and are being—scrutinized. For instance, Hercules (soon to be a big-time phenol maker), may swing into bisphenol if a stepped-up market de-

* In Switzerland by Ciba; independently in the U.S. by Devoe & Raynolds.

sol'vent

A substance capable of, or used in, dissolving something.

Example: **GLYCERINE!**

Glycerine's wide range of solvent power, coupled with its nontoxicity, makes it an extremely versatile solvent. Its nonvolatility and stability protect shelf life. It is compatible with many other ingredients.

Customers *know* Glycerine, accept it, and respect your decision not to compromise with quality by using substitutes.

New Digitalis Injection

For example, a combination of U.S.P. Glycerine, "Carbowax," benzyl alcohol, ethyl alcohol and water is an effective solvent for the intramuscular injection of digitalis, according to a recent report. In the past, digitalis was administered in an alcoholic solution and often caused pain, varied in effectiveness, and involved a danger of tissue damage. Tests have shown the new formulation to be nontoxic, nonirritating, and effective in treatment, according to the report.

Balance of Properties

But Glycerine's ability to act as a solvent is only part of the story. You can count on *versatile* Glycerine to serve as —

humectant	lubricant
vehicle	demulcent
plasticizer	suspending agent
sweetener	chemical intermediate

Booklets on the application of Glycerine in the food and pharmaceutical fields are available. For your copy, write to Dept. CW, Glycerine Producers' Association, 295 Madison Avenue, New York 17, N. Y.

Nothing takes the place of Glycerine

MAIL COUPON BELOW

The BETTER the ODOR the BIGGER the SALES!

WHAT FRAGRANCE! WHAT FLAVOR! . . .

Is that an envelope the lady's swooning over? Indeed, yes! . . . Softly scented writing paper and envelope with deliciously flavored gummed flap! It's a far cry from the crude glues of years past to the laboratory perfected adhesives of today. Odor and flavor are now being scientifically employed to lend unique appeal to these essential tools of everyday communication. Cinnamon, clove or peppermint-flavored adhesives provide another example of modern industry's determination to give new character and distinction to articles once drab and commonplace. Let the coupon below lead the way to odor and flavor applications that could well increase the sales potential of your product.

mand warrants it. And not a few companies are toying with epichlorhydrin —with or without glycerine.

In addition, companies already in limited epoxy resin manufacture are also poised for sudden expansion. Borden, at the moment progressing at a cautious 10-12,000 lbs./month clip, can easily convert existing phenolic equipment to almost immediately double or triple that amount.

Incidently, Borden is keeping mum about its epoxy producing route; says only that it is not the more common epichlorhydrin-bisphenol-A process.

There's a sound reason for interest in the versatile epoxy resins. For if the last few years have seen a phenomenal skyrocketing in production and consumption, the future may well send the wonder resins to a stratospheric economic level.

In 1946, epichlorhydrin-producing Shell Chemical, under a Devoe & Raynolds license, began marketing epoxies under the tradename Epon. As recently as 1950, neither Shell nor Ciba were mass-producing in the U.S. Shortly after that the epoxy escalator surged into high gear, is now expected to hit a zipping near-30 million lbs./year output rate within a matter of months.

It's doubtful whether or not the main outlets a few years ago (surface coatings, paints, varnishes) could have upped consumption enough to support the present expansion. Even the early tentative scratching of the adhesive and potting (embedding of electrical parts in plastics) fields by Ciba held little promise of the burgeoning to come.

But now, despite the imminent epoxy flood, only a few skeptics fear overcapacity. For with the growth of older uses added to some newer ones, rapidly moving out of the development stage, chances are even that next year's 30 million lbs.-capacity may soon be inadequate.

Pipeline to Plenty: Probably one of the most important of the newer applications is a structural—not a coating—role. While some 80 to 90% of its epoxy resin production is currently going into protective coatings, Shell is enthusiastic about its glass fiber-reinforced epoxies undergoing practical tests as chemical and petroleum tankage and pipelines.

The epoxy pipe may lick two major "plastic" pipe bugaboos:

- Inability to withstand both high pressures and high temperatures;
- Perviousness to a number of corrosive materials.

At the moment primary application for the epoxy pipe is in transporting sour crude oil and oil-field salt water.

Though current sights are on the limited oil field market, that one use—about 50 million ft. of pipe last year for sour crudes alone—may one day gulp some 35-45 million lbs. of epoxies. That's more than the industry's near-future capacity.

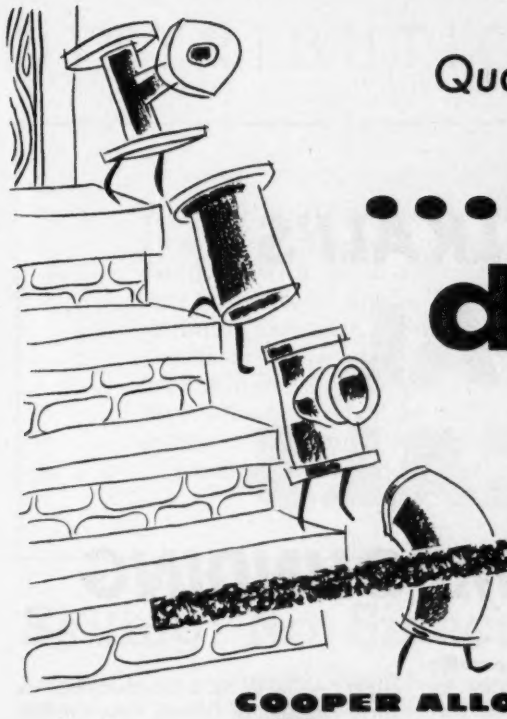
Another indication of the possible trend: at least three major steel companies have stepped, or are contemplating stepping, into plastic pipe production.

One weight dragging epoxy pipe's chances of making too much of a dent, however, is its high price. For instance, the liquid grade right now is hovering around $1.03/lb., the solids, between 60-67¢. Compare these with a polyester liquid 40-60¢, and some solid phenolics in the 18-25¢/lb. range.

Civilian Market: Ciba, long emphasizing adhesives and electrical potting rather than coatings, is looking ahead to greater structural use in civilian manufactures. In the past the company has devoted much of its epoxy research to aircraft and military uses.

Now with the coming of color television and higher voltages than those used in black and white, epoxies may find a blossoming outlet in potting circuit components that are now exposed to air and touch.

Advantages are many: amber clarity, excellent insulating qualities, high-temperature stability, no-pressure casting, to name a few. But add this important one: the resins may be filled with inert materials where keeping costs to a minimum is a deciding factor.



Epoxies are a far cry from old-line fish glues and library pastes, for in its use as an adhesive, the epoxy resin "wonder" label stands out sharply. There seems to be nothing that can't be bonded by these resins: plastics to steel, glass to brass, wood to metal, metal to metal, rubber, rock or ceramic—you name it, and the epoxies will stick it at little or no pressure and at comfortable heats.

Epoxy producers and formulators have a collective eye, too, on many other now-acorn, soon-oak uses, e.g., interior and masonry paints, automobiles (both as a paint and for structural purposes), potting of plant transformers and coils, in airplanes and guided missiles, food can coatings.

Adding it all up, it's obvious that epoxy resins have a lot on the ball—and the ball will gain momentum as it rolls through a host of new markets in this country as well as abroad.

DIAMOND ALKALI'S SPECIAL CHEMICALS FOR PLASTICS COMPOUNDING

CHLOROWAX® 40	**Liquid chlorinated paraffin containing 40% chlorine by weight. Inert, nontoxic, soluble in wide variety of organic solvents.**	Highly suitable as a co-plasticizer in vinyl compounds. Lowers compounding costs at no sacrifice in quality.
CHLOROWAX® 70	**Resinous chlorinated paraffin containing 70% chlorine by weight. Cream-colored nontoxic resin. Soluble in most organic solvents. Highly resistant to burning.**	Useful as processing aid when compounded with rigid plastics, since it lowers softening point.
SURFEX® MM	**Precipitated calcium carbonate. Particle size 1 to 5 microns. Resin-coated. Low oil absorption (20 - 22 cc/100 grams).**	Useful as extender in vinyl compounds and glass reinforced polyester resin products, lowering compounding costs. Contributes excellent color and light stability to organosols and plastisols.
MULTIFEX® MM	**Ultra-fine precipitated calcium carbonate. Particle size .05 to .06 microns. Uncoated.**	Used in vinyl compounds for extrusion and floor tile. Contributes improved abrasion resistance and higher gloss. Reduces compounding cost with no appreciable degradation.
KALITE®	**Precipitated calcium carbonate. Particle size about 1 micron. Oil absorption 28-32 cc. per 100 grams. Coated with 1% fatty acid.**	Used extensively in calendered 20-gauge film such as vinyl upholstery compounds. Has low oil absorption. Excellent calendering properties.

DIAMOND CHEMICALS FOR PLASTICS COMPOUNDING

DIAMOND ALKALI COMPANY • CLEVELAND 14, OHIO

DIAMOND ALKALI CHEMICALS®

DISTRIBUTION . . .

WANTED: Chemical salesman. Progressive company desires aggressive individual with wide experience in general chemicals field. Technical background desirable. Substantial future awaits the man able to produce in the face of increasing competition and greater diversification. Must be willing to travel, make calls, work at old-time selling. Mere order-takers need not apply.

Selling: No Sinecure in '54

Embodied in the hypothetical advertisement above are the hopes and fears of today's typical chemical sales manager. Mindful that this is a year of change, CW is keeping close tabs on selling developments. As 1953 rolls on, this is the picture:

With a scant two weeks remaining of the third quarter of this year, chemical sales managers are beginning to see some of their earlier forebodings come true, while other dire predictions of sales slumps evaporate into the future.

CW's latest survey of sales managers finds the field as a whole to be in a state of flux; there are no pat phrases to describe it, no common outlook for sales.

There is, of course, a certain general pattern of thinking pervading each sales manager's outlook. Some of the more common grounds for fretting:

- More incoming capacity means, in most cases, heavier competition.
- Greater diversification among established companies is leading to a multiplication of material sources.
- Expanding lines of products, due to ever-active research and development as well as from simply taking on more items, is taxing sales managers' capacities to familiarize their men with the entire list, to assure the expert technical service needed and demanded by customers.

In contrast with these expressions of pessimism, however, many replies show that business has been amazingly brisk, the future as roseate as ever. Some sample remarks:

- From a sulfuric acid maker: "Next year, we believe, will see better business in acid and we are getting ready for it now."
- From a fine-chemicals man: "We aren't worried right now—sales are up 25% over last year."
- And another heavy chemical sales manager foresees no "crash" . . . "unless we talk ourselves into it. If it comes it'll be the best advertised tailspin in history—and that's why I'm not afraid of it."

Where You Are: A few worries stem directly from local conditions. Prime example: the drought-bedeviled Southwest.

Most concerned manager is, of course, the one selling (or rather, trying to sell) insecticides and herbicides. His troubles are twofold: As one summed it up:

"There has been such a serious drought in west Texas that even the boll weevils have been burned up . . . As for 2,4,5,-T, which we sell for killing mesquite, our business has been terrible . . . the drought has forced many ranchers right out of business. Cattlemen just haven't got the money to buy 2,4,5,-T to clear the mesquite off their pastures.

"And another problem is credit. Just now, customers who normally buy from me are on credit restrictions. This prevents me from even soliciting orders from formulators, grinders and others producing insecticides for sale to cotton and other farmers."

Other, more general problems, that plague especially the Southwest sales manager are high freight rates and increasing truck deliveries.

One major alkali sales manager admitted: "I'm troubled over the high cost of freight from our Eastern

You can't buy fatty alcohols on price alone

If price were the main reason for buying CACHALOT *brand fatty alcohols you wouldn't go wrong.* For these were the first cetyl, oleyl, and stearyl alcohols priced low to reach the large tonnage market. CACHALOT has opened up new uses for these versatile raw materials as intermediates in the production of additives, brominates, chlorinates, condensates, esters, mercaptans, nitrites, sulfates, phosphates. Yet, *re*-orders for CACHALOT brand fatty alcohols are based on more than their low price. CACHALOT offers the largest selection of fatty alcohols available in tonnage lots of uniform quality. You can get a material that meets your specs and be sure that *every* delivery will stick to those specs. Read how you can use CACHALOT fatty alcohols in booklet on "Possibilities". Write M. Michel and Company, Inc., 90 Broad Street, New York 4, N. Y. A basic supplier to chemical manufacturers for over a quarter century, their trade name for fine vacuum-distilled fatty alcohols is

Cachalot.

plant, which makes some products not turned out by our local plant."

And concerning truck deliveries, he volunteered, "We're getting competition from companies with alkali plants nearer Houston than ours. We lose customers to companies with plants nearby where they take advantage of truck deliveries.

"Truck and carload lots carry the same prices. There is a transition from railroad to truck delivery developing in the Southwest that is revolutionizing chemical distribution in this area."

In other areas—not beset by drought nor the handicap of the long haul—the sales manager's outlook is far different. Whether expressed in positive or negative terms, a spirit of optimism permeates the typical reply.

Concerning potential new business, one Midwest manager cited this example: "We constantly advertise that samples of material are available for customers, and these ads bring a tremendous response. The problem is how to divide the salesmen's time to service these requests."

And on the more sober side of continuing sales in the face of a possible recession, another Midwest sales manager philosophized: "As far as next year is concerned, I'm not too worried how business goes—it may not be at peak, but it won't be down more than 5%.

"Of course our business follows the national economy anyhow. If times get lean, housewives stop sending laundry out, use more detergents at home. Our scheduled sales for the balance of the year are quite high and we're well pleased with the future pospects."

Who You Are: A few replies to CW's survey showed up differences between "little" and "big" business. One manager, who classified his company as "small," analyzed the situation like this:

"We aren't worried about the present, but we do see handwriting on the wall—little signs of what's to come popping up in odd places.

"There are already instances of two unusual types of competition. First, the big companies are already feeling the pinch because they're sniping at small accounts of only a few thousand pounds a month that they couldn't be bothered with before.

"Second, there have been cases where a big company has put up a plant and found later that the new product flopped. Then, rather than have the plant idle, they've cast about for something else to make. When they choose something a small company puts out, this large capacity can really be a menace."

The contrast between "small" and "large" business, however, did not loom large in the consensus of replies to the survey.

More Diversity: Of more widespread concern to the sales executive is the increasing diversification of product lines. A fair number of responses treated the question at some length.

Two distinct facets of the problem showed up:

- Diversification of his own company's line.
- Increased competition from diversification of others.

Discussing his own company's branching into new fields, one harassed sales supervisor submitted this analysis:

"When you have a relatively small sales group selling to virtually every industry, you eventually discover that your men can't be expert in every line.

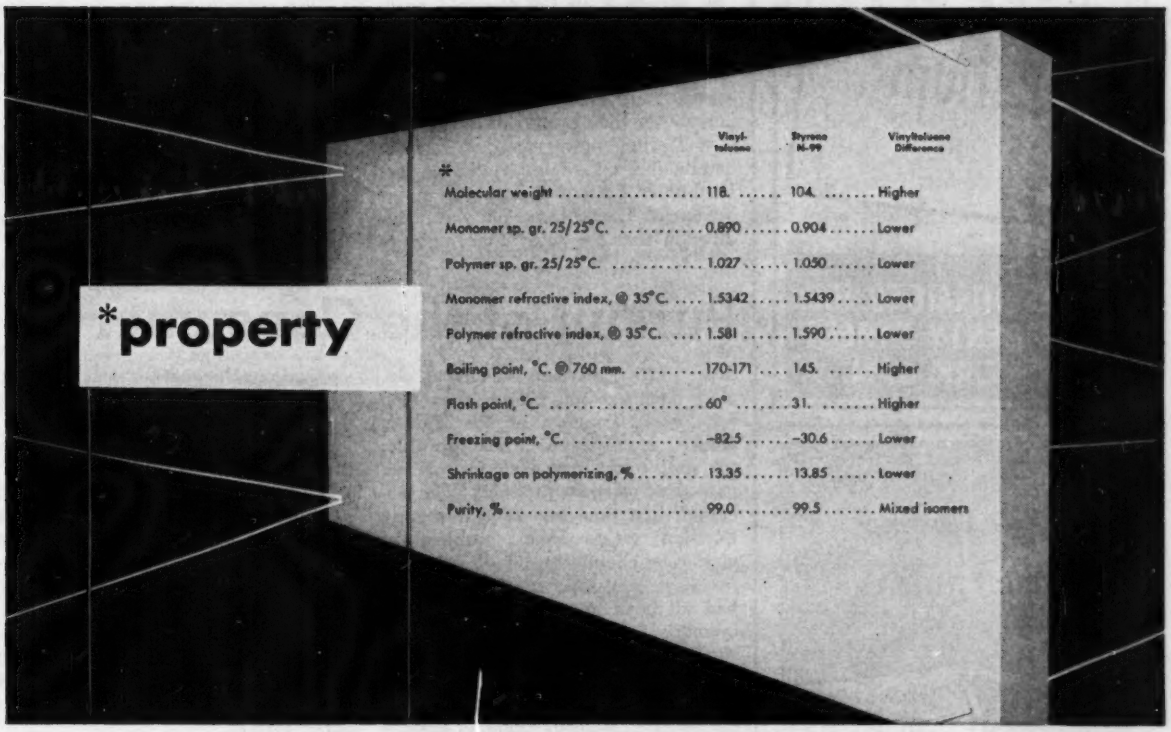
"Since technical service is such an important part of chemical selling, this is becoming a problem.

"It reflects back to the research and development staffs . . . they can't all be experts in every line, either. Trying to keep the men abreast of all the fields in which they sell is a very real problem. And it'll get more difficult as research staffs continue bringing new applications and products to the industry."

Diversification on the other side of the fence, i.e., on the part of the competitor, is inflicting the sales manager with more headaches, too. He learns his boys are finding an ever-increasing number of competitors in each group of chemicals. In the words of one manager, this is about what happens:

"Formerly, our man might have encountered one or two competitors for each chemical he tried to sell. Now there are four, five or six outfits after every order.

"This increase is due to the fact that chemical companies are diversifying. A company notices that some chemical is in great demand and it immediately goes into production of this item.



"This salesman's customer of long standing feels that he should give his order to one of the new competitors for some reason or other or that he would do well to split his order among more than one company."

Back to Selling: The average sales manager isn't just moping over the fact that the seller's market is ap-

DOW

COMPARISONS SUGGEST END-USE ADVANTAGES OF VINYLTOLUENE

DOW vinyltoluene reacts with many unsaturated compounds to produce a wide range of completely new copolymers

Vinyltoluene, the latest in a series of monomers developed in Dow's research laboratories, will supplement styrene in many ways. This new monomer shows important property variations from styrene, pointing to its advantageous substitution for styrene in creating new types of synthetic rubber, rubber reinforcing resins, polyester resins, coating latexes and paint vehicles.

Development work has demonstrated that paint vehicles made with vinyltoluene will be particularly valuable. While styrene will react with several usable paint oils, vinyltoluene has proven its ability to react to form clear, useful vehicles with all of the commercially important drying oils.

Quantities of vinyltoluene sufficient for developmental work are now available. For copies of the vinyltoluene-styrene comparison chart write to THE DOW CHEMICAL COMPANY, Midland, Michigan, Plastics Dept. PL 1356A.

parently gone. Taking the future as a challenge, most of them are acting now to lead their forces back to the firing line.

Some action-seeking tactics now being tried by managers:

- "Reactivating" and retraining their men, especially those who had been trained chiefly during the order-taking period of the past 10 or 12 years.
- Expanding their forces in order to work territories more intensively.
- Needling their men by setting up quota systems.
- Stepping up the required number of calls per day.
- In some cases, to meet demand for technical service, realigning the sales system into divisions by products rather than by territories.
- Alerting newer men on how to handle under-the-table tactics of less scrupulous competitors.

Sign of Times? As a fairly sure indication that the sales honeymoon is over, several sales managers mentioned instances of what they considered "sharp" practices cropping up with increasing frequency.

One old-timer spelled out his woes in these terms:

"The undercutters are quite prevalent these days, and it plays havoc with my men, who are trying to sell from a published price list. The trouble is, these sharpies quote one price to one customer, another to another; and my men have no way of knowing how much they are being underquoted.

"We console our boys by pointing out that many customers who buy from these price-cutters eventually come back to people like us. But it's still a tough nut to crack."

Then, as an afterthought that seemed to wrap up his own policy of selling, the old-timer added: "Selling your product, provided it fills a need, is, after all, a matter of showing the customer what it will do for him."

Pursuit of the Consumer

Some 175 American Chemical Society members and friends assembled last week Tuesday at the Palmer House, in Chicago. Their purpose: to mull over case histories of the marketing of new products. The occasion: first time the ACS Marketing Division met to discuss problems of marketing chemical products intended for consumer use; previous sessions had all been devoted to considering industrial sales.

Kicking off the session as presiding officer, Indoil Chemical's William Plummer supplied the background for the meeting. Some of Plummer's points emphasized:

- Technological competition today is becoming increasingly important to the chemical maker, and frequently overshadows price competition.
- Compared with industrial sales, consumer-product marketing involves different methods, channels, approach.

For the Teeth: John Brown, Jr., of Lambert Pharmacal, then proceeded to show the special complexities involved in marketing a new dentifrice. In this day of rough competition and rapid development of new formulas, Brown pointed out, changes in the market pattern are far more dramatic than the actual benefits received by the consumer.

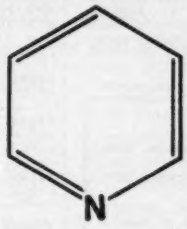
Bringing his hearers up to the minute with remarks on the new anti-enzyme agents for toothpaste, Brown also supplied figures illustrating the switch in dentifrice popularity. Investigations showed, for instance, that:

- Only about half the people use a dentifrice regularly.
- Food stores now sell as much as drug stores.
- Whereas in 1950 ammoniated toothpaste had captured 15% of the market, by last year the breakdown ran: regular formula paste, 60%; ammoniated-type, 10%; chlorophyll-containing, 30%.

Soil Conditioner: Monsanto's Richard Lawrence then took the stand with a now-it-can-be-told account of his company's analysis of the soil conditioner market.

The "Krilium" analysis, begun a scant six months before the product name broke into print, was approached from three directions:

- Determining the greater returns possible to truck farmers and greenhouse operators.
- Learning the prospective displacement of peat moss and other mulching agents.
- Checking special interests such as the 8 million upper-income families with home gardens.



In addition to the three market possibilities, there are other basic trends that Lawrence sees multiplying the conditioner markets. Some of these:

- Rapid population growth.
- Loss of top soil due to erosion.
- More home gardens, result of shortening work week.

House Coat: Taking the instance of latex paint as an outstanding ex-

2° REFINED PYRIDINE

C_5H_5N

PHYSICAL CHARACTERISTICS

Pyridine is more stable to oxidation than benzene, tends to undergo substitution rather than additions, but is not as easy as benzene to substitute.

Because pyridine is more resistant to the usual aromatic substitutions, bromination can be accomplished only in the vapor phase at about 300-degree temperature, and sulfonation and nitration can be effected only under forcing conditions; substitutions always occur in the beta position.

In degree of reactivity pyridine corresponds to nitrobenzene rather than benzene.

2° *Refined Pyridine* is well worth further study in your laboratory.

Typical Analysis of U·S·S 2° Refined Pyridine

Distillation, °C	
Start	114.0
5%	114.4
End Point	115.5
Range	1.5
Specific Gravity at 15.5/15.5°C	0.988
Color (Sayboit)	+20
Water, %	0.1

United States Steel offers 2° Refined Pyridine of high quality and purity for use in the manufacture of vitamins such as Niacin and Niacinamide; in medicinals such as antihistamines and sulfapyridines; in the production of water-repellent fabrics; in the manufacture of insecticides; as a solvent for dyes; and in the rubber industry. In addition, pyridine undoubtedly has a host of other applications, undeveloped up to now due to limited availability. It is available now in ample quantities, either in 55-gallon drums or tank-car lots.

FOR FREE LABORATORY SAMPLE . . . Just send in the convenient coupon to Coal Chemical Sales Division, United States Steel Corporation, Room 2817-I, 525 William Penn Place, Pittsburgh 30, Pa.—or write on your company letterhead to our nearest Coal Chemical Sales Office.

PLANT FOR SALE

Metropolitan Area. 65,000 sq. ft. Three story brick building. 2 oil-fired boilers over 700 B.H.P. each 160 lb. rating. Building sprinklered throuot with freight elevators, 185' loading dock, and 6,000 sq. ft. yard. Unlimited soft water and city sewage. Brick garage 10,000 sq. ft. sprinklered and heated. Easily accessible to various communities, highways and turnpike. Plant now operating with plentiful local labor.

BO 8221 Chemical Week
330 W. 42 St., New York 36, N. Y.

ample of fast marketing of a chemical consumer product, Sherwin-Williams Co.'s N. E. Van Stone cited the advantages enjoyed by such a company as his, where the sales organization is already familiar with the exact needs of the trade.

Van Stone sketched how, starting with S-W's 50,000 dealer outlets, the paint-buying public was approached with products especially tailored to meet changing demands.

Retailing Detergents: In contrast with Van Stone's talk, James Cloney, General Dyestuff Corp., discussed the relatively more difficult selling task involved when a basic chemical manufacturer, who lacks consumer selling experience, decides to market retail products.

In this case, the manufacturer must not only lick the usual retail problems of product acceptability and the factors affecting selling techniques in established channels, but he must also make the jump from manufacturer to distributor.

This added effort, detailed Cloney, requires that he face such hurdles as:

- Selecting his distribution channel.
- Evolving a basic merchandising and selling scheme.
- Making an initial market investment to obtain trade acceptance of his company.

Shining Example: "If I could wrap up a blueprint pattern for successful sales of a new product in a box and give it to you, I'd be out using it for Gold Seal instead of talking here."

This was the modest opening with which Harold Schafer, president of Gold Seal Co., maker of Glass Wax, greeted his audience.

"We're not successful," continued Schafer, "because of anyone's personality or the product, but because of a system of doing business . . . and a desire to be successful without the normal finances most businesses require."

Schafer then mentioned 10 books and 12 periodical articles, which he concluded all agree that for marketing success the would-be seller needs:

- A worthwhile product;
- A good consumer package;
- Right pricing;
- Good distribution;
- Effective advertising.

Schafer particularly shuns blueprinted patterns of previous promotions. "The best idea," he avers, "is to find out how to sell a little—profitably; then expand that system."

Over-All Views: When the group reconvened for the afternoon session, emphasis switched from specific case histories to over-all aspects of consumer product marketing.

Peter Peterson, Market Facts, Inc., asked his listeners to consider the role of market surveys. Just how far a survey may be relied upon, stressed Peterson, is at least as important a consideration as the actual results uncovered. A more useful purpose of the market survey is in making decisions as to the product's color, size, etc.

John Conner, of Sellers & Conner, discussed the product liability to which a manufacturer subjects itself by marketing a new chemical product. Conner detailed the considerations necessary to avoid crippling damage suits.

Robert Neubauer stressed that in the case of a new nonadvertised product, the most important advertising medium can be packaging. Many a salable item fails because it is merely identified—not presented—to the customer.

Paul Slawter, Jr., Sterling Advertising Agency, pointing out that "new products are sold today not on merit alone, but with emotional appeals," spelled out six factors for the successful promotion of a chemical houseware.

Slawter's factors included (1) price right—around $1, (2) appeal to impulse in concept and package, (3) fill a mass need to stimulate mass demand, (4) promote with similar items, (5) feature in store, convenient to customer, (6) hammer away in store follow-up promotions.

Toxicological testing is basic in the marketing of new products. This was the theme of Elliott Maynard, University of Rochester. Sound toxicity data are the backbone of any product liability defense, and toxicological research should be an essential part of product testing.

M. H. ("Mike") Baker wound up the session with a comparison of industrial and consumer marketing. Maintaining that the two are worlds apart, Baker pointed out such differences as:

- Consumer marketing is extensive; industrial is intensive, customer-to-customer.
- Consumer interest is convenience, quality, price; industrial interest is continuity of supply, reputation of maker, uniformity.
- Consumer advertising is aimed frequently at impulse buying; in industrial advertising the impulse feature is almost nonexistent.

Good Start: When the session broke up, this much seemed to be established in the minds of those who had come and heard: consumer marketing, while fraught with pitfalls, can be rewarding and fascinating.

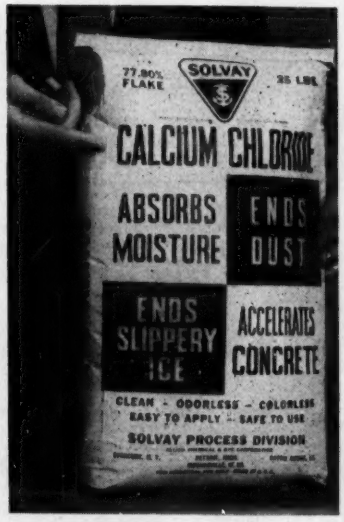
DISTRIBUTION . . . .



For the Bookshelf

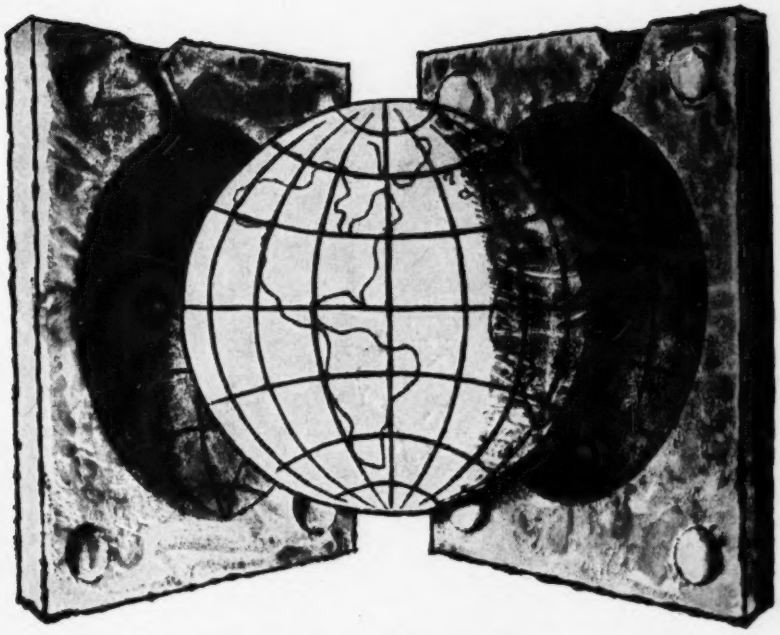
Here are some recent chemical literature offerings:

• The Tennessee Industrial & Agricultural Development Commission has prepared a "Plant Location Directory of Basic Chemical Products." Producing points, arranged by states, are listed for ammonia, caustic, chlorine, hydrochloric acid, alcohol, nitric acid, salt, soda ash, sulfur and sulfuric acid. Price: $1.

• Applications for cetyl, oleyl and stearyl alcohols are grouped together as "Possibilities with Fatty Alcohols," an 8-page pamphlet available from M. Michel and Co. (New York).

• The first catalog is now off the presses reflecting the amalgamated product lines of S. B. Penick & Co. and the New York Quinine & Chemical Works.

Retail Bid



IN AN EFFORT to stimulate wider interest in consumer use of calcium chloride, Solvay Process Div., Allied Chemical & Dye Corp., is now offering this 25-lb. bag for display purposes in hardware stores, other retail outlets.

Features of the container include:

• Bright blue and gold checkerboard front with suggested uses;

• A tuck-in pouring spout at bottom corner;

• Detailed how-to-use instructions printed on back.

Shell Molding Opens a New World!

Yesterday saw molten metal cast in extremely cumbersome, hard-to-handle sand molds.

Today a new world is emerging from a thin shell of sand bound together with phenolic resins. This is the world of shell molded castings – economical, amazingly precise and free from flaws.

As a leader in creative chemistry, Reichhold is reaching out to the challenge of this great new world. It is expanding its facilities to meet the ever increasing demand for phenolic resins created by the shell molding process.

In the foundry industry, as in many other fields of enterprise, Reichhold continues to pioneer . . . to perfect . . . and to produce. So it is that RCI has plants around the world – *wherever* basic raw materials are found . . . *wherever* industry needs its products!

REICHHOLD CHEMICALS, INC.
630 Fifth Avenue, New York 20, N. Y.

Creative Chemistry . . . Your Partner in Progress

REICHHOLD

Uses of RCI Products

CANVAS, PAPER AND GLASS CLOTH LAMINATES: PLYOPHEN cresol, phenolic and resorcinol-formaldehyde resins and varnishes; RCI polyester resins.

CARBON PAPER: RCI inorganic chemical pigment colors.

CASTINGS: FOUNDREZ powdered phenolic resins (for the shell molding process); FOUNDREZ liquid phenolic resins and FOUNDREZ core oils (for core binders).

FURNITURE, PLYWOOD, FLOORING, HARDBOARD AND CHIPBOARD: HYDROPHEN phenolic glues; PLYACIEN protein glues; PLYAMINE urea-formaldehyde glues; PLYOPHEN phenolic and resorcinol-formaldehyde glues.

LEATHER: BECKOSOL alkyd resins (for leather finishes); PLYOPHEN resorcinol-formaldehyde resins, SUPER-BECKACITE pure phenolic resins, SYNTHE-COPAL ester gums (for leather adhesives).

LINOLEUM: BECKOSOL alkyd resins and PENTACITE pentaerythritol resins (for linoleum coatings); RCI inorganic chemical pigment colors.

PAINTS, VARNISHES AND LACQUERS: BECKACITE (1) fumaric, (2) maleic and (3) modified phenolic resins; BECKAMINE urea-formaldehyde resins; BECKOLIN synthetic oils; BECKOPOL modified phenolic resins; BECKOSOL (1) phenolated, (2) phthalic-free, (3) rosin modified, (4) pure drying and (5) pure non-drying alkyd resins; KOPOL processed Congo copals; PENTACITE pentaerythritol resins; STYRESOL styrenated alkyd resins; SUPER-BECKACITE pure phenolic resins; SYNTHE-COPAL ester gums; WALLKYD pure drying alkyd resins (for alkyd flat wall vehicles); WALLPOL vinyl-type copolymer latex emulsions (for latex flat wall coatings); RCI inorganic chemical pigment colors.

PAPER: BECKAMINE urea-formaldehyde resins (for adding wet strength, improving the wet rub of starch-clay coatings, and waterproofing starch adhesives); RCI inorganic chemical pigment colors (for paper coloring); STYRESOL styrenated alkyd resins (for paper coating).

PRINTING INKS: BECKACITE fumaric, maleic and modified phenolic resins; BECKOLIN synthetic oils; BECKOPOL modified phenolic resins; RCI inorganic chemical pigment colors.

TYPEWRITER RIBBONS: RCI inorganic chemical pigment colors.

WAXES AND POLISHES: BECKACITE modified phenolic and maleic resins; SUPER-BECKACITE pure phenolic resins; SYNTHE-COPAL ester gums.

RCI

Propylene glycol USP has the excellent solvent performance demanded by industry for perfumes, dyes, food flavors, and certain pharmaceuticals. Propylene glycol assists in the better dispersion of soaps, oils, waxes, and greases in water.

When used in cosmetic and brushless shaving creams, propylene glycol enhances the softening action on the skin and is an humectant for the creams. In brushless shaving creams, it aids in coupling the oils and lanolin in water.

CARBIDE also produces an industrial grade of propylene glycol that is widely used as a coupler in hydraulic brake fluids and as a coolant in refrigeration systems.

Carbide and Carbon Chemicals Company, producers of propylene glycol since 1931, produces twelve other diols and triols:

Ethylene glycol
Diethylene glycol
Triethylene glycol
"Kromfax" Solvent (Thiodiglycol)
Dipropylene glycol
2,2 Diethyl-1,3-Propanediol
Octylene Glycol-1,3
Hexylene Glycol
2-Methoxymethyl-2,4-Dimethyl Pentanediol-1,5
Hexanetriol-1,2,6
Triol 230
2-Ethyl 2-Butyl-1,3-Propanediol

For further information on propylene glycol or any CARBIDE chemical, write for your copy of "Physical Properties of Synthetic Organic Chemicals" (F-6136) or the "Glycols" booklet (F-4763). Offices in principal cities—in Canada: Carbide and Carbon Chemicals, Limited, Toronto.

The term "Kromfax" is a registered trade-mark of Union Carbide and Carbon Corporation.

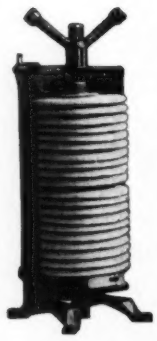
ALSOP Liquid Processing Equipment

FOR THE CHEMICAL & ALLIED INDUSTRIES

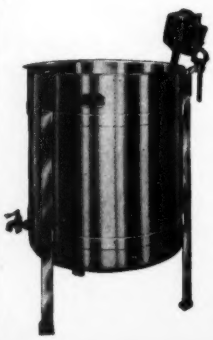


FILTERS · MIXERS · TANKS & PUMPS

We offer a whole complete line of Filters, Mixers, Tanks, and Pumps designed and manufactured to exacting standards and of the finest materials. We also offer the diversity and completeness of our experience in Agitation and Filtration Engineering and we are prepared to design semi-standard units which might be required to fit your specific job. Let us help you with your Mixing and Filtering operations. Call on us for specific and complete information on any unit, no obligation of course. Write for a free copy of our New Liquid Processing Equipment Catalogue.

"SEALED-DISC" ALL PURPOSE FILTERS

In use on thousands of different liquid products to increase purity, clarity, and brilliance or to remove slime, cloud, sludge, and undesirable particles. Their simplicity, portability and compactness assures convenience and speed in handling; the totally inclosed principle insures leak-proof, drip-proof operation. The Asbestos Filter Discs are available in eight different grades providing the right degree of filtration your product may require. Complete Units with Pump and Motor or as Filter Units only are available in Stainless Steel, Monel Metal, Iron, Steel, or Brass and Bronze, in a wide range of sizes and capacities.



"DISC-PAK" FILTERS FOR OILS AND WATER

Designed for all industrial oils, solvents and water. Using Asbestos Discs assembled in cartridge form, the "Disc-Pak" Filter completely removes dirt, rust, moisture, sludge, and all impurities. The Asbestos Disc Cartridges are made in eight different grades of porosity from coarse or fast flowing to finer grades that remove all impurities. "Disc-Pak" Filters are designed to hold from one to six Disc Cartridges offering a complete range of sizes or capacities up to 3600 g.p.h. Available in Brass and Bronze, or Stainless Steel with mounting bracket for stationary installation to pipe lines and tanks, or complete with suitable motor and pump mounted on a portable stand.

MIXERS FOR ALL LIQUIDS

We offer a full line of Portable Mixers in sizes from 1/10 H.P. up to 5 H.P. for uniform blending, dissolving and mixing. Equipped with our all-way adjustable clamp for speed and ease in positioning the shaft and propellers for the best mixing action. These portable, easy-to-operate Mixers make any open container a Mixing Tank. The two propellers are movable on the full length of the solid acid-resistant shaft allowing proper adjustment to conform with the batch depth. Standard shafts and propellers can be supplied of Stainless Steel, Monel Metal, Nickel, Aluminum, Bronze, Steel or Special Alloys.

MIXING AND STORAGE TANKS

We offer a complete line of sturdy 16 gauge Stainless Steel Open and Closed (non-pressure) Tanks in sizes from five to three hundred gallons capacity. The all welded construction, rounded corners, and the highly polished, crevice-free surfaces make them easy to clean and to keep sanitary. All Open Tanks can be supplied with a suitable Mixer, Covers, Valves, and Faucets of various types as complete Mixing Units. We can supply Closed Tanks (non-pressure type) in all sizes complete with either Top or Side Entering Mixing Unit Assemblies. The Specially designed sloping bottom insures complete and fast draining.

Chemical Week (including Chemical Specialties, and Chemical Industries) is published weekly by McGraw-Hill Publishing Company, Inc., James H. McGraw (1860-1948), Founder. **Publication Office: 1309 Noble Street., Philadelphia 23, Pa.**

Executive, Editorial and Advertising Offices: McGraw-Hill Building, 330 W. 42nd St., New York 36, N. Y. Curtis W. McGraw, President; Willard Chevalier, Executive Vice-President; Joseph A. Gerardi, Vice-President and Treasurer; John J. Cooke, Secretary; Paul Montgomery, Senior Vice-President, Publications Division; Ralph B. Smith, Vice-President and Editorial Director; Nelson Bond, Vice-President and Director of Advertising; J. E. Blackburn, Jr., Vice-President and Director of Circulation.

Subscriptions to Chemical Week are solicited in the chemical and process industries from management men in administration, research, production and distribution. Position and company connection must be indicated on subscription order. Address all subscription communications to Chemical Week Subscription Service, 1309 Noble St., Philadelphia 23, Pa., or 330 W. 42nd St., New York 36, N. Y. Allow one month for change of address.

Single copies 35¢. Subscription rates—United States and Possessions $5.00 a year; $8.00 for two years; $10.00 for three years. Canada $6.00 for a year; $10.00 for two years; $12.00 for three years. Other Western Hemisphere Countries $15.00 a year; $25.00 for two years; $30.00 for three years. All other countries $25.00 a year; $40.00 for two years; $50.00 for three years. Entered as second class matter December 20, 1951, at the Post Office at Philadelphia 23, Pa., under the Act of March 3, 1879. Printed in U.S.A. Copyright 1953 by McGraw-Hill Publishing Co., Inc.—All Rights Reserved.

The 29th Edition of the CHEMICAL WEEK BUYERS' GUIDE is edited specifically for buyers of raw materials, chemicals, equipment and containers in the chemical process industries. It is designed to provide easy-to-refer-to and up-to-date data on both products and sources of supply.

This year the Guide has been revised to enhance its convenience and usefulness. The Guide absorbed the McGRAW-HILL DIRECTORY OF CHEMICALS AND PRODUCERS in 1952 and the salient features of that reference are incorporated in this current issue.

NITROGEN DIVISION ALLIED CHEMICAL

Basic Products for Industry

ANHYDROUS AMMONIA:
Refrigeration Grade guaranteed 99.95% NH_3 minimum. Commercial Grade guaranteed 99.5% NH_3 minimum; 81.84% nitrogen.

AMMONIA LIQUOR:
Ammonium hydroxide—water solution. NH_4OH. "A" and "B" grades available.

AMMONIUM SULPHATE:
Sulphate of Ammonia. $(NH_4)_2SO_4$.

ETHYLENE OXIDE:
A reactive chemical intermediate for the synthesis of acids, alcohols, alkylanolamines, cyanohydrins, esters, ethers, glycols and halohydrins. For use in the manufacture of surface active agents such as detergents, emulsifiers, wetting and spreading agents, solubilizers and penetrants.

ETHYLENE GLYCOL:
A clear, colorless, practically odorless, hygroscopic liquid used in the antifreeze, cellophane, chemical, electrical, fiber, paint, plastics, rubber and other industries.

DIETHYLENE GLYCOL:
A clear, colorless, hygroscopic, non-corrosive liquid for use as a solvent, humectant and chemical intermediate.

METHANOL:
Synthetic methyl alcohol—99.85% pure.

FORMALDEHYDE:
Available in the following forms: 37% Inhibited, 37% Low-Methanol and 45% Low-Methanol.

NITROGEN TETROXIDE:
As an oxidant in liquid propellants, nitrogen tetroxide offers outstanding advantages to designers of rocket motors.

SODIUM NITRATE:
Supplied in three crystal sizes as ARCADIAN* Nitrate of Soda. On a dry basis it contains at least 99.5% $NaNO_3$.

UREA:
Nitrogen Division is a basic producer of Crystal Urea (carbamide), a high-purity product with many industrial uses.

U. F. CONCENTRATE-85:
A highly concentrated solution of formaldehyde that offers special advantages in the manufacture of urea-formaldehyde resins and adhesives.

●

Nitrogen Division products are the result of more than 60 years of experience. They are backed by an enviable reputation for high standards of product quality, enterprising research and reliable, dependable technical assistance and service. We welcome your inquiry about any of the products listed above.

*Reg. U. S. Pat. Off.

AA QUALITY CHEMICALS

The AMERICAN AGRICULTURAL CHEMICAL Co.

For over 85 years manufacturers of high-quality products, we present this convenient and briefly descriptive list of chemicals which we manufacture.

Because of their exceptional purity and uniformity, they are of special interest to the drug, food, film and other industries.

Your inquiries are invited. Your particular needs will receive the prompt and co-operative attention of our entire staff. Write or phone: Chemical Department, The American Agricultural Chemical Co., 50 Church Street, New York 7, N. Y., or our nearest office, listed on a following page.

PHOSPHORIC ACID

	FORMULA	GRADES	PACKING	USES
PHOSPHORIC ACID	H_3PO_4	85% N.F. Grade—Specific Gravity 1.71 75% Pure Food Grade—Specific Gravity 1.58 50% Pure Food Grade—Specific Gravity 1.34	Carboys, tank trucks, Drums (returnable). Carboys, Tank trucks, tank cars, Drums (returnable). Carboys.	Manufacture of pharmaceuticals, inorganic phosphates; acidulator for essences, jellies, mineral waters, soft drinks; rustproofing compounds; electropolishing; lakes in cotton dyeing; sugar defecant and clarifier; yeasts; waxes and polishes; binder for ceramics. Activated carbon production. Silage preservative.
		PHOSPHATES		
DISODIUM PHOSPHATE	$Na_2HPO_4 \cdot 12H_2O$	Technical Crystalline	Barrels, 5-ply paper bags	Manufacturing detergents, boiler compounds; chinaware; in chemical processing and dyestuffs; preparation of enamels; tinning, soldering; tanning, pigments, textiles; silk weighting, dyeing, calico printing, fireproofing agent.
TRISODIUM PHOSPHATE	$Na_3PO_4 \cdot 12H_2O$	Technical Crystalline	Barrels, 5-ply paper bags	As a detergent; manufacturing household and industrial cleansers; for dishwashing, laundry, boiler and water softening compounds; sugar clarification. Paint remover, metal cleaning, metal working.
***PHOS-FEED BRAND DICALCIUM PHOSPHATE** *Reg. U. S. Pat. Off.		Feed Phosphorus—18.5% min. Calcium—25% min. Fluorine—40 P.P.M. max.	5-ply paper bags Bulk	Mineral supplement for animal and poultry feeds.

PHOSPHORUS AND COMPOUNDS OF PHOSPHORUS

	FORMULA	GRADES	PACKING	SHIPPING REGULATIONS	USES
ELEMENTAL PHOSPHORUS Yellow-White	P	Solid, Segments	Steel drums (returnable)	Yellow label Inflammable Solid	Manufacture of phosphoric acid, phosphate salts; compounds of phosphorus, rodent poisons, copper and bronze alloys; flares, smoke screens, pyrotechnics.
PHOSPHORUS RED (AMORPHOUS)	P	Powder, Technical	11 lb. tins (10 tins per case) 100 lb. drums (non-returnable)	Yellow label Inflammable Solid	Manufacture of matches, pyrotechnics, flares.
PHOSPHORUS PENTASULPHIDE	P_2S_5	Powder, Lump. Technical	Steel drums (non-returnable)	Yellow label Inflammable Solid	Additive for lubricating oils and synthetic organic chemistry.
PHOSPHORUS SESQUISULPHIDE	P_4S_3	Powder, Lump. Technical	Steel drums (non-returnable)	Yellow label Inflammable Solid	Manufacture of matches, pyrotechnics; synthetic organic chemistry.
FERRO PHOSPHORUS (Iron Phosphide)		24% to 26% Phosphorus Technical	Barrels Bulk-gondola cars		Foundries: To increase fluidity of iron and steel castings. Steel: In sheet steel to prevent sticking of sheets in final rolling. Wire: In wire to give stiffness and better surface for drawing.
SLAG		Dust, ⅜", 2½"	Bulk only		Manufacture of rock wool; road building and general filler.

FLUORIDES AND FLUOSILICATES

	FORMULA	GRADES	PACKING	SHIPPING REGULATIONS	USES
SODIUM FLUORIDE	NaF	Powder, Granular. Technical	Fibre drums Small packages	Poison—red printing on white label.	Flux in rimmed steel ingots, electro-plating; heat-treating salts; glass manufacture; pesticides; fluoridation of water.
AMMONIUM FLUOSILICATE	$(NH_4)_2SiF_6$	Technical	Fibre drums	Poison—red printing on white label.	As a laundry sour; in magnesium metal casting; moth proofing compounds; glass etching; electro-plating copper on zinc and iron.
MAGNESIUM FLUOSILICATE	$MgSiF_6 \cdot 6H_2O$	Technical	Fibre drums	Poison—red printing on white label.	Hardening and waterproofing surface of concrete, stucco and brickwork; moth proofing compounds; waterproofing specialty products.
POTASSIUM FLUOSILICATE	K_2SiF_6	Technical	Fibre drums	Poison—red printing on white label.	Flux for removal of magnesium from aluminum metal; as a sand inhibitor in magnesium metal casting.
SODIUM FLUOSILICATE	Na_2SiF_6	Technical	Barrels Bags	Poison—red printing on white label.	Ceramic glazes, opal glass, artificial marble, insecticide, laundry sour; preservative in glue and leather; aluminum metal refining; fluoridation of water.
ZINC FLUOSILICATE	$ZnSiF_6 \cdot 6H_2O$	Technical	Fibre drums	Poison—red printing on white label.	Moth proofing agent for textiles; laundry sour; moth proofing compounds.
FLUOSILICATE MIXTURE	75% Magnesium Fluosilicate 25% Zinc Fluosilicate	Technical	Fibre drums	Poison—red printing on white label.	Hardening and waterproofing surface of concrete, stucco and brickwork.

FLUORIDES AND FLUOSILICATES (Continued)

	FORMULA	GRADES	PACKING	SHIPPING REGULATIONS	USES
AMMONIUM FLUOBORATE	NH_4BF_4	Technical	Fibre drums	Poison: red printing on white label	Fluxing and plating of metals.
ALUMINUM FLUORIDE	$AlF_3.3\frac{1}{2}H_2O$	Technical	Fibre drums	Poison: red printing on white label	Ceramics, glass, fermentation.
SYNTHETIC CRYOLITE	Na_3AlF_6	Technical	Fibre drums	Poison red printing on white label	Insecticide, ceramics, glass.
MAGNESIUM FLUORIDE (SPECIAL No. 100)		Technical	Fibre drums	Poison: red printing on white label	Metal Flux.

KEYSTONE GELATIN

	FORMULA	GRADES	PACKING	USES
*KEYSTONE GELATIN	$C_{103}H_{151}O_{39}N_{31}$	EDIBLE:— Silver Label, Flakes. Various Jelly strengths and otherwise to specifications. Granulated and Flakes.	Fibre drums	Meats, candy, baking, ice cream, gelatin desserts, jellied foods, and other food products.
		PHOTOGRAPHIC:— Film and paper emulsion types. Lithogel—for photo-gelatin printing.	Fibre drums	Photographic films, plates, papers. Photo lithography and photo-gelatin engraving. Collotype printing and silk screen stencils.
		PHARMACEUTICAL:— Pharmagels "A" & "B" Capsule grades & specialty items	Fibre drums	Hard capsules, soft capsules, suppositories, pill coating, emulsions and culture media.
		TECHNICAL:— Granulated	Fibre drums	Print rollers, sizings, emulsions, decalcomanias and a protective colloid.

BONE PRODUCTS

		GRADES	PACKING	USES
ANIMAL BONE CHARCOAL	A solid amorphous black resulting from the charring of clean cattle bones.	Standard grades from ½" to fine powdered.	Bags Barrels	Clarifying cane sugar, glucose and oils; water purifying, decolorizing, deodorizing, and air filtration.
BONE BLACK PIGMENT (COSMIC*) BLACKS	An amorphous black pigment, air floated for extra fineness.	25 standard grades	Barrels Cartons	In paint, varnish, lacquer, artificial leather, plastics, printing ink, blackings, polishes.
BONE ASH	"A" Grade Approx. 41% P_2O_5—56% CaO Calcined steamed bone. "O" Grade Approx. 53% P_2O_5—46.5% CaO Calcined Dicalcium Phosphate.	Approx. 200 mesh	Bags Barrels	Ceramics, enamel and glassware; copper refining, smelting, cupels.
BONE OIL	Commercial Names: Dippel's Oil, Hartshorn Oil, Bone Tar.	Technical	Steel drums Tank cars	Manufacture of organic preparations, pyridine, pyrrole; as a denaturant; in medicine.
PRECIPITATED BONE PHOSPHATE	Dicalcium Phosphate	Technical Animal Feed Grade	Bags Barrels	In poultry and livestock feed; glass and ceramic flux; special bleaching compounds.

*Reg. U.S. Pat. Off.

KEYSTONE AMMONIUM CARBONATE

	FORMULA	GRADES	PACKING	USES
*KEYSTONE AMMONIUM CARBONATE U.S.P.	A sublimed product consisting of $NH_4HCO_3.NH_2.COO.NH_4$	Chips Lump Powdered	Steel drums Fibre drums Kegs, 5 lb. cans (in cartons)	Bakeries, pharmaceuticals, smelling salts, malt preparations, special glass and chemical processes.

SALT CAKE

	FORMULA	GRADES	PACKING	USES
SALT CAKE	Na_2SO_4	Technical	Bulk, in carloads only	Plate and window glass flux; Kraft paper; ceramic glazes.

SULPHURIC ACID

	FORMULA	GRADE	PACKING	SHIPPING REGULATIONS	USES
SULPHURIC ACID	H_2SO_4	60 degree Baume 77.6% H_2SO_4	Tank cars Tank trucks	White label	Fertilizers, explosives, leather industry, manufacture of various chemicals, pickling iron and steel, precious metal refining, electroplating, metal cleaning, metallurgy, batteries, rubber reclaiming; textile industry; manufacture of fatty acids.

INSECTICIDES AND FUNGICIDES

Dry Lead Arsenate
Calcium Arsenate
Derox 0.75% Rotenone
Nicotine *Pyrox—garden spray
***Pyrox—with Arsenical—no nicotine**
Potato Powder No. 1
***Phosphodust—Diluent for dusts and sprays**

FERTILIZER AND FERTILIZER MATERIALS

***AGRICO—the Nation's Leading Fertilizer**
***AA QUALITY Fertilizers**
****18% NORMAL Superphosphate**
***AA QUALITY Ground Phosphate Rock**
SUPERPHOSPHATE
PHOSPHATE ROCK—Florida Land Pebble
***AGRINITE—the organic Plant Food**

*Reg. U.S. Pat Off.

AMERICAN FLANGE & MANUFACTURING CO. INC.

30 Rockefeller Plaza, New York 20, N. Y.

Tri-Sure Products Limited, St. Catharines, Ontario, Canada

Cross-section view of Tri-Sure Closure

Tri-Sure
CLOSURES

The Tri-Sure* Closure is used in more countries, by more companies and for more products than any other drum closure—because it is recognized as the most reliable means of ensuring the delivery of the exact quantity and quality which the shipper puts into the container.

The Tri-Sure "Margin of Safety"

The Tri-Sure Closure provides a margin of safety which far surpasses the requirements of the average container:

Safety from Leakage and Seepage
Safety from Internal and External Pressure
Safety from Breathing-in and Contamination
Safety from Pilferage and Substitution

This multiple assurance of safety is achieved by the proper interengagement of three precisely formed parts—a flange, a plug and a seal.

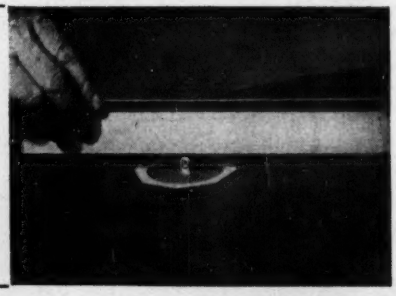
Tri-Sure Flange before insertion

Tri-Sure Flange, inserted

TRI-SURE FLANGES

The Tri-Sure Flange receives the Tri-Sure Plug uniformly, completes a contained seat for the plug gasket, and effects leak-proof, tamper-proof engagement with the Tri-Sure Seal.

As Strong as the Drum Itself



The drum stock is formed with an octagonal seat to receive snugly the base of the flange, and an upstanding collar into which the neck of the flange fits snugly. The neck of the flange extends above the collar, and is curled down over it so that the flange gasket is compressed between the flange and the drum stock. This exclusive Tri-Sure assembly resists rotation, distortion and leakage. Tri-Sure Flanges are made of steel, in 2", 1¼" and ¾" sizes, and may be ordered Unplated, Zinc-plated, Tin-plated, Stainless Steel or Lacquered. Aluminum Flanges are also available. Tri-Sure Flanges are equipped with Buna N gaskets as standard; Neoprene and other gaskets are available. Threads are American standard straight pipe threads. British Whitworth threads can be supplied.

Tri-Sure Coated Flanges

Tri-Sure Coated Flanges are for lined or coated steel containers, to prevent contact of the contents of the drum with metal fittings. They are coated with a lacquer specified by customer which is applied evenly, and covers threads throughout.

TRI-SURE FULL DRAINAGE SAVES 8.34 OUNCES IN EVERY DRUM

Tri-Sure Closures effect a saving in gallonage—which often is considerable—because the flange assures more efficient drainage. The base of the flange fits perfectly flush with the inside of the drumhead, permitting full drainage of the drum. Tests have shown that drums fitted with Tri-Sure Closures drain an average of 8.34 more ounces. Calculated on the basis of a 10,000 55-gallon drum shipment of lube oil, the consumer will recover over 650 gallons which would otherwise remain in the drums.

TRI-SURE PLUGS

The Tri-Sure Plug fits securely into the flange to effect a tight closing. The gasket seat on the plug mates with the gasket seat on the flange so that when the plug is screwed securely home, the plug gasket is contained by metal. This not only prevents leakage and seepage, but also precludes loosening of the plug.

Tri-Sure Plugs are threaded with American standard straight pipe threads. British Whitworth threads are supplied on specification.

With the exception of the Tri-Sure Polyethylene Plug, all Tri-Sure Plugs are provided with a Buna N Gasket; White Neoprene, Polyethylene, Fibre and other material are available.

Tri-Sure Plug wrenches and gasket applicators are available.

Die-Cast Plugs

Tri-Sure Die-Cast Plugs are characterized by uniformity of quality, measurement and thread. They are made of highest quality Zinc die-casting alloy available, which makes the longest-lasting and strongest die-cast plug. Tri-Sure Die-Cast Plugs are spark-resisting, and preclude freezing of the threads of the plug and flange. Lugs make it easy to turn the plug with any common tool. Tri-Sure Die-Cast Plugs are also available in aluminum.

Tri-Sure Die-Cast Plugs are made in three standard sizes—2", 1½" and ¾". The 2" and ¾" sizes can be supplied with tin plating or coated.

Steel Plugs

Tri-Sure Steel Plugs have exceptional strength yet are light in weight. They are available in 2" and ¾" sizes, and may be obtained unplated, tinplated or coated.

The plug has a side wall worked into a thread formation by our exclusive thread rolling process which provides sharp pipe threads.

Stainless Steel Plugs

Tri-Sure Plugs made of Stainless Steel are avalable in 2" and ¾" sizes. These plugs are of cut-thread construction.

Polyethylene Plugs with an integral gasket

The Tri-Sure Polyethylene Plug is an integral, one-piece construction molded from Polyethylene. The plug body is formed to provide a gasket. This material is resistant to many acids, corrosive materials and alkalis. It precludes the possibility of electrolytic action between plug and other parts of the container.

The Tri-Sure Polyethylene Plug should be used with a Tri-Sure Cap Seal to maintain all features of a tight, leak-proof, tamper-proof closure.

Top-Scored Seal

Side-Scored Seal

Top-Scored Tab Seal

TRI-SURE SEALS with Flowed-in Gasket

The Tri-Sure Cap Seal is the most efficient drum closure seal ever developed. It is a cap-type steel member with flowed-in gasket which is secured over the flange and plug. The seal will withstand internal and external pressures on the drum that far exceed the pressure induced by weather and temperature without leakage or breathing.

Prevents Undetected Tampering

When the seal is applied with the Tri-Sure Sealing Tool, the skirt of the seal is pressed in against the neck of the drum stock, and extends fractically to the base of that neck. Once the Tri-Sure Cap Seal has been properly applied, it must be destroyed to reach the contents of the drum—making undetected tampering, pilferage and substitution impossible. Yet its authorized removal is an easy, quick operation by means of tearing along suitable scored lines. Tri-Sure hand and power-operated sealing tools and Tri-Sure Seal removal tools are available.

Private designs may be lithographed in full color on all Tri-Sure Cap Seals. Where a private design is not required we offer the stock "Sealed-Guaranteed" design, illustrated.

Gasket Assures Leak-Proof Seal

Tri-Sure Seals are provided with a flowed-in gasket made of a special compound which seals against air and liquids, and assures a tight seal under all conditions.

Top-Scored Seals—Deep uninterrupted parallel score lines across the top and down the sides of the seal are joined by a cross score in the center of the top to enable a screw driver or other simple tool to be driven readily through the seal. The material between the scores can then be grasped by a pair of pliers, and torn on scored lines to remove.

Side-Scored Seals—Tri-Sure Side-Scored Seals are scored internally around their sides or skirts. Outwardly extending ears are formed at the beginning of the scored lines. To remove the seal it is necessary merely to grasp one of the ears with a pair of pliers and tear as indicated.

Top-Scored Tab Seals—The Tri-Sure Top-Scored Tab Seal is scored in the same manner as the regular top-scored seal. It has tabs extending out from each end of the scored section to make its removal easy.

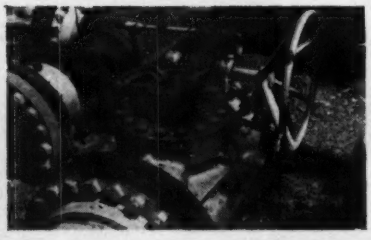
COATED FLANGES AND PLUGS

These flanges and plugs may be coated as specified by the customer. They enable users of lined or coated steel containers to eliminate contact of the product with metal fittings. The coating is laid on evenly and covers the threads throughout. The same formulation applied to the container can be used for flanges and plugs. This ensures complete protection for contents of container. Your drum supplier will install Tri-Sure Coated Flanges and Plugs on request.

SPECIFY "TRI-SURE CLOSURES" ON DRUM ORDERS

Every drum manufacturer can supply you with Tri-Sure Closures. A Tri-Sure Flange is inserted as an integral part of the steel container body at the time of manufacture. Precision dies for this operation, supplied by our company, are in the plants of all drum manufacturers. Just specify Tri-Sure Closures to your drum supplier; your drums will be delivered to you equipped with Tri-Sure Flanges and Tri-Sure Plugs. Be sure to look for the "Tri-Sure" trademark, which appears on the flange, plug and seal and on the drum stock around the flange when a genuine Tri-Sure insertion has been made.

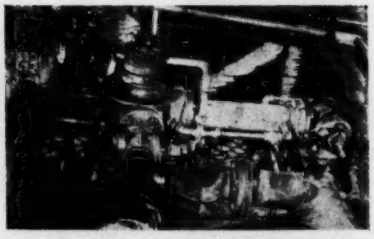
Tri-Sure Cap Seals for filled drums should be purchased directly from us.



** The "Tri-Sure" Trademark is a mark of reliability backed by over 31 years serving industry. It tells your customers that genuine Tri-Sure Flanges (inserted with genuine Tri-Sure dies), Plugs and Seals were used.*

Non-retarded straight-through flow

. . is guaranteed by A.C.F.'s Round Port Valves because the valve opening is *exactly* the same size and shape as the pipe itself.
As a result you get full capacity flow of heavy viscous ladings, no loss in head pressure. Materials in suspension have no abrasive effect.



Full pipe area and the non-wedging effect of CYLINDRICAL Plug Design is also available in A.C.F. Rectangular Port Valves. It will pay to get all the facts about *both* before you buy. Call your nearby A.C.F. Representative now or write direct for information.

IN PETROLEUM AND GAS INSTALLATIONS A.C.F. Valves provide full flow with no pressure loss, fastest sure operation.

IN PROCESSING A.C.F. Round Port Valves are ideal for such materials as cement slurry with straight-through uninterrupted flow.

TWELVE YEARS OF SERVICE for these A.C.F. Valves handling hot asphalt is evidence of service-free performance.

A.C.F. CYLINDRICAL FULL PIPE AREA PLUG VALVES

1953-1954 Edition

INDUSTRIAL CHEMICALS

AMERICAN Cyanamid COMPANY
Industrial Chemicals Division

Chemicals for the Paper Industry

PAREZ® Resins

The most complete line of melamine-formaldehyde and urea-formaldehyde resins for improving the wet and dry strength of paper and imparting wet-rub resistance to starch-pigment coatings.

Sizing Agents

CYRON* Size—A synthetic size used to size paper on the acid or alkaline side.

CYFOR® Size—A fortified rosin size used to give the highest sizing efficiency.

ACCOBRITE® Rosin Sizes—Special pale wood sizes having outstanding color, uniformity, and sizing properties.

Gum and Wood Rosin Sizes—A complete series of sizes in liquid or dry form and light to dark grades. Modified sizes are available for specialty applications.

Wax Emulsions

ALWAX* and WAXINE® Sizes—A complete series of wax sizes which are acid, alkaline, or acid-alkaline stable. They are wax emulsions or wax-rosin emulsions utilizing various types of waxes for differing properties.

Specialties

ACCOCEL® 741 Pitch Dispersant.

CYNOL* Softening, Rewetting, and Defoaming Agents.

AZITE® 900 Liquefier—A product for the liquefaction of certain coating adhesives.

Aluminum Sulfate, Sodium Phospho Aluminate, Acids, and other Heavy Chemicals.

Chemicals for the Petroleum Industry

Drilling Mud Conditioner

AEROPAN® Drilling Mud Conditioner—An organic reagent based on acrylonitrile designed to reduce water loss, promote mud stability, and minimize mud contamination.

Synthetic Fluid Catalysts

AEROCAT® Cracking Catalysts—A range of microspheroidal catalysts used in the refining of petroleum in fluid catalytic cracking units.

AEROFORM* Hydroforming Catalyst—A microspheroidal, molybdenum catalyst used in fluid hydroforming units.

Specialty Catalysts

A series of catalysts of varying shapes and compositions for ammonia synthesis, carbon monoxide oxidation, gas reforming, sulfur removal, and other chemical reactions.

Lubricating Oil Additives

AEROLUBE® Additives—A series of inhibitors and inhibitor-detergent combinations used to improve lubricants.

Gelling Agents for Grease

A series of improved gelling agents used to produce aluminum greases.

Acids, Alkalis, and other Heavy Chemicals.

Chemicals for the Chemical Industry

Nitrogen Chemicals

Primarily employed as chemical intermediates.
AERO* Acetone Cyanohydrin
AERO Cyanuric Chloride
AERO Dicyandiamide
AERO Ethylene Cyanohydrin
AERO Guanidine Carbonate
AERO Guanidine Hydrochloride
AERO Guanidine Nitrate
AERO HCN (Liquid Hydrocyanic Acid)
AERO Melamine

Prussiates

AERO Sodium Ferrocyanide
AERO Potassium Ferrocyanide

*Trade-mark

AERO Phthalic Anhydride

Surface Active Agents

AEROSOL®—A series of agents having a wide range of applications and properties.

Acids, Alkalis, and other Heavy Chemicals.

Chemicals for the Leather Industry

TANAK® Synthetic Tanning Agents

Naphthalene type—used in chrome and vegetable tanning.

Melamine type—used in the production of white and colored chrome leathers.

TWECOTAN® Tanning Agents†

Special blends of natural and synthetic agents.

Tanning and Dyewood Extracts†

Available as liquids, crystals, or solids.

Divi Divi	Logwood
Fustic	Osage Orange
Hematine	Quercitron
Hemlock	Sumac
Hypernic	Wattle

Specialties

CUTRILIN® Bating Materials
BETASOL® Wetting Agents
DEPILIN® Unhairing Agent

Bichromates and other Heavy Chemicals.

†Manufactured by Taylor Extracting Co.
American Cyanamid Co., sole distributors.

Chemicals for the Metal Industry

Ladle Agent

A special form of calcium cyanamide used to increase the nitrogen content of molten steel.

Pickling Additive

AEROBRITE®—A pickle bath additive used to extend the life of the bath and inhibit acid attack of the metal.

Heat Treating Salts

A series of molten salt baths.

AEROCARB® Carburizing Compounds
AEROCASE® Case Hardening Compounds
AEROHEAT® Neutral Heat Treating Salts

Metallic Stearates

Dry lubricants used in metal-powder molding.

AEROSOL Surface Active Agents

Acids and other Heavy Chemicals.

Chemicals for Industry

Acids	Glauber's Salt
Acetic Acid	Lead Stearate
Boric Acid	Magnesium Carbonate
Hydrochloric Acid	Magnesium Oxide
Hydrofluoric Acid	Magnesium Stearate
Hydrofluosilicic Acid	Magnesium Sulfate

Can you say YES to these two questions?

1. Are you familiar with the commercially available CASTOR OIL DERIVATIVES?

2. Are you up-to-date in your CASTOR OIL chemistry?

Here's your get-acquainted listing of the BAKER line of Castor Oil Derivatives. Samples and technical data are available. Use the convenient coupon.

ACIDS
Ricinoleic (12-hydroxy-9 Octadecenoic)
9-11 Linoleic (Octadecadienoic)
Undecylenic (9-Hendecenoic)
Undecylic (Undecanoic)
Heptanoic (Enanthic)

ALCOHOL
n-Heptanol (n-heptyl)

ALDEHYDE
Heptaldehyde (Enanthaldehyde)

ESTERS	METHYL	BUTYL	METHYL CELLOSOLVE	GLYCERYL (MONO)	PROPYLENE GLYCOL (MONO)	ETHYLENE GLYCOL (MONO)

Use Barclay Experience In Your Problems

30 YEARS' SPECIALIZED SERVICE

to
Purchasing Agents
Manufacturers
Consumers
Exporters

- CHEMICALS
- PHARMACEUTICALS
- COLORS
- INTERMEDIATES
- SOLVENTS
- RESINS
- PLASTICIZERS
- VEGETABLE OILS

Barclay helps you in three ways

1—You receive a confidential and dependable source of supply for "difficult to obtain" raw materials.

2—You can have the benefit of our years of intimate contacts and experience with domestic and foreign sources of supply.

3—Barclay is your ready market for any materials on which you are overstocked.

Let us quote on your specific requirements—without obligation, and in the strictest confidence.

Substantial warehouse stocks are maintained at all times.

Barclay

SPECIALISTS IN CHEMICALS AND BY-PRODUCTS

CHEMICAL COMPANY, Inc.

77 Varick Street, New York 13, N. Y. • WO 4-5120

BARIUM AND CHEMICALS, Incorporated

WILLOUGHBY, OHIO

"A Leader in the Field of High-Purity Compounds"

Specialists for over thirty-five years in the manufacture of high-quality Barium, Strontium, and Calcium Compounds. These high-purity compounds have found use in over half a hundred different and diversified industries.

MANUFACTURERS OF POROUS BARIUM and STRONTIUM OXIDE-CARBIDE-FREE

(Suitable for Methylation Reactions and Specially Adapted for Desiccator Purposes.)

Barium Acetate
Barium Carbonate
Barium Chloride
Barium Chromate
Barium Hydrate
Barium Hydroxide (Anhydrous)
Barium Nitrate
Barium Oxalate
Barium Oxide
Barium Peroxide
Barium Sulphate
Barium Sulphide

Strontium Acetate
Strontium Carbonate
Strontium Chloride
Strontium Chromate
Strontium Hydrate
Strontium Hydroxide (Anhydrous)
Strontium Nitrate
Strontium Oxalate
Strontium Oxide
Strontium Peroxide
Strontium Sulphate
Strontium Sulphide

Calcium Acetate
Calcium Nitrate
Calcium Oxalate
Calcium Peroxide
Calcium Sulphide

PURE, TECHNICAL, AND REAGENT GRADES

WHY NOT FIND OUT IF BARIUM OR STRONTIUM CAN BE USED IN ONE OF YOUR PROCESSES TODAY!

Your inquiries are invited and you can be assured of prompt and cooperative attention from our entire staff.

For detailed information, write or phone . . .

the Versenes*

LIGHT ON THE VERSENES*

"Versene" is the registered trade mark of certain synthetically prepared polyamino acids and their salts. The Versenes form soluble non-ionic chelates with polyvalent metallic ions and completely change their properties so that they can no longer react with other materials and be precipitated from solution by common precipitating agents.

THERE ARE SEVEN

VERSENE REGULAR (the original Versene) inactivates all metallic ions but is not particularly effective for complexing iron in alkaline solutions. (liquid or powder)

VERSENE Fe_3 SPECIFIC is the most powerful complexing agent known for *iron* in the normal pH range. It also chelates copper, nickel, cobalt and zinc. (47% solution)

VERSENE Fe_3 is a combination of VERSENE and VERSENE Fe_3 SPECIFIC. It complexes both iron and other metallic ions. (Powder or liquid)

VERSENE-T complexes ferric and divalent metal ions including hard water salts in *any* caustic solution. (55.5% solution)

DI-SODIUM VERSENATE DI-HYDRATE (dry powder) an Analytical Reagent grade of Versene Regular for research and analytical purposes.

(A) VERSENATE INDICATOR (alcohol solution) Color indicator for Versenate method of water analysis.

CALCIUM DI-SODIUM VERSENATE (25% solution) Chemically Pure grade material for use as stabilizers in drugs, vitamins, pharmaceuticals.

LEAD DI-SODIUM VERSENATE (34% solution) Preformed complex for use in vinyl plastics.

The Versenes give you mole-for-mole control over cations in solution. They are made only by the Bersworth Chemical Company under processes originated, developed and patented by F. C. Bersworth. Quality-control over manufacture is so high that uniform complexing power is guaranteed.

VERSENES*-MADE FOR YOU

Gladly will we share with you our quarter-century of experience in pioneering the polyamines. Samples for experiment will be provided on request and without obligation. Ask for Technical Bulletin #2. Chemical Counsel available. Write Dept. F. Send for prices.

*Trade Mark Registered

VERSENE* WATER TEST KIT. Tells total hardness in 2 minutes. Accurate to 1 gr. per gal. Versenate method. Complete with instructions $5.00 postpaid.

SOLKA®-FLOC

PURE, FINELY DIVIDED WOOD CELLULOSE

"**SOLKA**" is a registered trade name of the Brown Company for its chemically purified wood cellulose. "**SOLKA-FLOC**" is a finely divided cellulose produced from **SOLKA**. It is non-abrasive and relatively inert to acids, alkalis and solvents. It is practically ashless and, when bone dry, it is at least 99.5% cellulose. It is widely used as a filler, extender and processing aid in the rubber and plastics industries, as a filter aid, and in decorative coating. It is a versatile chemical raw material for the production of cellulose derivatives.

GENERAL CHARACTERISTICS

Uniformity — Unexcelled uniformity in **SOLKA-FLOC** is assured by Brown Company's own control of raw materials for conversion to flock, its large, steady volume of manufacture, and its many years of production experience in purified cellulose of every physical form.

Chemically Inert — **SOLKA-FLOC** is totally unaffected, or to a very limited degree, by solvents, dilute acids and alkalis, or even strong caustic in the cold.

Non Abrasive — The cellulose fibres in **SOLKA-FLOC** are soft and resilient and completely non-abrasive to equipment and machinery with which it is handled.

Purity — **SOLKA-FLOC** is derived from the purest of wood cellulose fibres of high alpha content. When bone dry they are 99.5% plus pure cellulose.

Color Stability — The initial high brightness of **SOLKA-FLOC** shows little reversion on exposure to ultraviolet light or to heat at 100°C.

Soft — Cellulose is inherently soft and **SOLKA-FLOC** exceptionally so; when applied by "flocking" to give sueded surfaces, **SOLKA-FLOC** contributes the softest feel obtainable from any fibre.

Fibrous — **SOLKA-FLOC** consists of fibres of 1 to 2 microns diameter and 35 to 165 microns average length; products of either higher or lower average length can be supplied.

Controlled Bulk — Each **SOLKA-FLOC** item is manufactured to a controlled bulk level; their apparent densities vary from 9 to 34 pounds per cubic foot (6.8 to 1.9 cc/gram).

Ashless — White **SOLKA-FLOC** contains only trace amounts of minerals and is thereby readily and properly combined with other substances.

Strength — **SOLKA-FLOC** fibres are tough. When used as filler, they contribute real strength to most products.

Improved Color — The **SOLKA-FLOC** line includes products of maximum initial whiteness and maximum color stability.

Absorbent — The fibres in **SOLKA-FLOC** exhibit a multitude of open ends and, under some conditions, exhibit high absorptive capacity so that these products may be used as carriers for liquids or odors or even for purification by absorption. However, proper combination with rubber, waxes and other sealing agents eliminates water absorption.

Low Gravity — The true specific gravity of pure cellulose is 1.58 and, when used as filler, **SOLKA-FLOC** is almost unique in its ability to produce light weight products.

Variety — There are eight standard **SOLKA-FLOC** products, and numerous special ones, covering a complete range of physical characteristics and finenesses for all industrial applications.

SOLKA-FLOC represents a variety of fibres of novel utility, as may readily be seen from the following tabulation of some present known applications. It is available in both white and brown grades.

BROWN COMPANY

APPLICATIONS FOR SOLKA-FLOC

Chemical Derivatives of Cellulose

Methyl and Ethyl Ethers of Cellulose
Carboxy — Methyl Cellulose
Hydroxy — Ethyl Cellulose
Cellulose Sulfate, etc.

Plastics

Tableware, Buttons, Bottle Caps
Toys, Poker Chips, Wheels
Electrical Parts
Table Tops, Trays, etc.

Other

Coated Welding Rod
Velour Paper and Sueded Novelties
Flock Printing of Textiles
Adhesives
Can Sealing Compounds

Rubber Processing Aid

All Types Soling
Floor Tile, Matting, and Tread
Calendered Footwear
Phonograph Records
Battery Cases, Tank Lining, Rolls, etc.
Proofed Goods and Artificial Leather
Sponge and Cellular Rubber

Filter Aid

Alkalis
Plating Solutions
Industrial Effluents
Sodium Aluminate
Cutting and Cooling Oils
Pentaerythritol
Gelatin and Glue
Tallow and Lard
Waxes and Emulsions
Swimming Pool Water
Petroleum Additives
Antibiotics
Soap Solutions
Fruit Juices
Sodium Tungstate
Alum
Whiskey, Wine, and Beer
Industrial Process Water
Nicotinic Acid
Alkyd Resins
Edible Oils
Pectin
Gold Cyanide
Lubricating Oils
Viscose Regenerating Bath
Perfume
Coffee
Rust Preventives
Cellulose Acetate

AVAILABILITY

SOLKA-FLOC is available in one-pound cans for experimental use. Commercial shipments are made in fifty (50) pound multi-wall paper bags, packed 40,000 pounds or more to the carload.

Customers interested in steady reliable quantities for indefinite periods can be cared for by Brown Company's usual contract procedure. Recently doubled production facilities are now in operation.

Brown Company maintains a Technical Service staff which will be glad to assist you in producing a new or a finer product, or in reducing the cost of your present product, through the use of **SOLKA-FLOC**.

BECCO PEROXYGEN CHEMICALS

For Oxidation Sterilization
Bleaching Catalytic Reactions

PRODUCT	Active Oxygen (% by wt min)	Assay % by weight minimum	Form	Specific Gravity (20°C.)	Stability	Solubility	Residue
Hydrogen Peroxide H_2O_2 — 27.5%	12.9	H_2O_2 27.5	clear colorless liquid	1.10	no loss of active oxygen under ordinary conditions	Miscible with H_2O in all proportions	
Hydrogen Peroxide H_2O_2 — 35%	16.5	H_2O_2 35.0		1.13			
Hydrogen Peroxide H_2O_2 — Formula D (Special grade for dilution purposes)	16.5	H_2O_2 35.0		1.13			Formula F 0.005%
Hydrogen Peroxide H_2O_2 — Formula F (Special grade for food processing)	16.5	H_2O_2 35.0		1.13			
Hydrogen Peroxide H_2O_2 — 50%	23.5	H_2O_2 50.0		1.20			
Hydrogen Peroxide 90%	42.3	H_2O_2 90.0	clear colorless liquid	1.39	no loss on storage under ordinary conditions	Miscible with H_2O in all proportions. Soluble in many organic media	less than 0.005%
Potassium Persulfate $K_2S_2O_8$	5.9	$K_2S_2O_8$ 94.0	white crystals		no loss of active oxygen over two yrs storage at room temperature	5% in water at 20°C.	
Ammonium Persulfate $(NH_4)_2S_2O_8$	6.6	$(NH_4)_2S_2O_8$ 95.0	white hygroscopic crystals			58% at 0°C. in water	
Sodium Carbonate Peroxide $2Na_2CO_3.3H_2O_2$	14.0	H_2O_2 29.7 (approx.)	white powder			soluble in water	
Sodium Pyrophosphate Peroxide $Na_4P_2O_7.2H_2O_2$	9.0	H_2O_2 19.0 (approx.)	white powder			soluble in water	
Urea Peroxide $CO(NH_2)_2.H_2O_2$	16.0	H_2O_2 34.0 (approx.)	white crystals or tablets			soluble in water and alcohols	
Calcium Peroxide 60% CaO_2	13.3	CaO_2 60.0	white to yellowish powder		no loss of active oxygen at room temp. Decomp. above 150°C.	insoluble in water sol. in acid media	
Magnesium Peroxide MgO_2 — 15%	4.3	MgO_2 15-25-50	yellowish white powder		no loss of active oxygen at room temp. Decomp. above 100°C.	insoluble in water sol. in acid media	
Magnesium Peroxide MgO_2 — 25%	7.1						
Magnesium Peroxide MgO_2 — 50%	14.2						
Zinc Peroxide 55% ZnO_2	9.0	ZnO_2 55 (approx.)	yellowish white powder		no loss of active oxygen at room temp. Decomp. above 150°C.	insoluble in water soluble in acid media	
Acetyl Peroxide in Dimethyl Phthalate $(CH_3CO)_2O_2$	3.4	$(CH_3CO)_2O_2$ 25.0 Dimeth. Phth. 75.0	crystal clear liquid— strong odor	1.18		soluble in most organic solvents	
Peracetic acid 40% $CH_3.COOOH$	as peracid 8.6	$CH_3.COOOH$ 40	colorless liquid— strong odor	1.15		similar to acetic acid	
Sodium Pergorate $NaBO_3.4H_2O$	10.0	$NaBO_3.4H_2O$ 96.2	white powder		substantially no loss under ordinary storage conditions	3.4% in water at 25°C.

CELANESE CHEMICALS

USES

INTERMEDIATES

ACIDS

ACETIC ACID—reactant and solvent in manufacture of cellulose acetate and other chemical fibers and plastics; ester solvents, dyestuffs, metallic salts, pharmaceuticals.

BUTYRIC ACID—used in manufacture of cellulose acetate butyrates for lacquers, and molding plastics. Intermediate for production of butyric esters, used in artificial flavors.

PROPIONIC ACID—used to produce cellulose propionate molding materials, esters for lacquers, flavors, perfumes, sodium and calcium propionate (mold inhibitors).

ALDEHYDES

ACETALDEHYDE—basic in production of acetic acid, acetic anhydride, pentaerythritol; intermediate in making DDT, dyes, pharmaceuticals.

FORMALDEHYDE 37% (Formalin)—reacts with phenol, urea and melamine to form plastics and resinous products; agricultural disinfectant and bactericide; rubber preservative; sulfide corrosion inhibitor; moth-proofing agent, tanning agent.

PARAFORMALDEHYDE (Formaldehyde 91%)—furnishes formaldehyde in more concentrated form than formalin for manufacture of high solids phenolic and urea resins. Low water content allows larger batches, higher yields, shorter cycle and processing time. Also intermediate in production of water-repellent finishes, adhesives and pharmaceuticals.

FORMCEL* SOLUTIONS—relatively water free formaldehyde solutions in alcohols, especially adaptable to production of alcoholated condensation resins, coatings, laminating and textile-treating resins, embalming fluids.

TRIOXANE—as only source of completely anhydrous formaldehyde, can be advantageously used in organic synthesis; solid heating tablet; excellent solvent and reaction medium.

ANHYDRIDES

ACETIC ANHYDRIDE—acetylating and esterfying agent, in preparation of cellulose acetate; also used to make dyes, pharmaceuticals, esters, intermediates.

OXIDES

PROPYLENE OXIDE—1, 2—powerful solvent for vinyls, cellulose acetate, nitrocellulose; vinyl resin stabilizer; stabilizer for chlorinated resin solutions.

POLYLOLS

PENTAERYTHRITOL—used in manufacture of medium and long oil alkyd resins, to produce surface coatings with higher gloss retention, faster drying time, increased durability. Also used in production of rosin esters and synthetic drying oils

VINYL MONOMERS

VINYL ACETATE—basic material in manufacture of polyvinyl resin adhesives, textile and paper coatings, plastic films, sheeting and molding materials, water-emulsion paints.

PLASTICIZERS

LINDOL*—Tricresyl Phosphate, coal tar base—a standard for industrial use as a flame-resistant plasticizer. Also widely used as a lubricant, oil and gasoline additive.

CELLUFLEX* 179C—Tricresyl Phosphate, petroleum base—combines excellent solvent power and flame-retardant properties as general plasticizer for vinyl resins and cellulosic plastics. Especially advantageous for coatings and films where extreme flame resistance and toughness are vital.

CELLUFLEX* 112—A mixed ester—useful in achieving a high degree of flame-resistance in vinyl formulations with better low temperature properties than can be reached with tricresyl phosphate.

CELLUFLEX* TPP—Triphenyl Phosphate—most widely used plasticizer in cellulose acetate. Provides excellent fire resistant properties, good flexibility; produces clear tough compositions.

CELLUFLEX* DBP—Dibutyl Phthalate—excellent light and heat stability, low viscosity plasticizer. Most widely used plasticizer for cellulose nitrate lacquers and coatings. Produces good gloss, high flexibility.

CELLUFLEX* DOP—Dioctyl Phthalate—low volatility, excellent heat and light stability, superior electrical properties. Primary plasticizer for vinyl resins, synthetic rubber in cloth coatings, elastomeric molded materials.

HYDRAULIC FLUID

LINDOL* HF—standard flame-resistant hydraulic fluid in die-casting and hydraulically-activated machinery. Stable, odorless, non-volatile, non-corrosive. Also excellent high film strength lubricant.

SOLVENTS

ALCOHOLS

METHANOL—excellent solvent for cellulose nitrate, other resins and gums. Intermediate for formaldehyde production.

n-PROPANOL—excellent ethyl cellulose solvent. Latent nitrocellulose solvent with same evaporation rate as butyl acetate.

ISOBUTANOL—modifying agent in alcoholated ureas ester type plasticizers. Co-solvent for brake fluids.

n-BUTANOL—latent solvent for cellulose ester lacquers, dopes and thinners. Solvent for urea-formaldehyde resins.

ESTERS

n-PROPYL ACETATE—economical replacement for either MIBK or butyl acetate-ethyl acetate mixtures in nitrocellulose lacquers.

n-BUTYL ACETATE—widely used medium evaporating solvent in lacquers.

901 ACETATE—replacement for amyl acetate or methyl amyl acetate. Retarder in lacquer solvents.

*Reg. U. S. Pat. Off.

CELANESE CHEMICALS

USES

SOLVENTS (CONTINUED)

GLYCOLS

PROPYLENE GLYCOL U.S.P.—humectant in tobacco conditioning; emollient, stabilizer, emulsifier in cosmetic creams and lotions. Solvent for food flavors and colors. Solvent, carrier, preservative for salves, serums, ointments and other pharmaceuticals.

PROPYLENE GLYCOL Tech.—important component for production of polyester resins. Co-solvent for brake fluids.

DIPROPYLENE GLYCOL—provides excellent coupling action. Co-solvent for brake fluids and printing inks.

BUTYLENE GLYCOL—1,3
BUTYLENE GLYCOL—2,3
Intermediate for polyester resins and alkyd resins. Brake fluid co-solvent, ink vehicle, lubricant.

KETONES

ACETONE—powerful solvent for cellulose acetate, nitrocellulose, oils, greases, fats, gums, explosives and dyes. Intermediate in manufacture of acrylates.

SPECIAL SOLVENTS

CELANESE SOLVENT 203—low cost replacement for normal butanol in nitrocellulose lacquers, alkyd resin formulations, thinners and SAE brake fluids.

CELANESE SOLVENT 301—replaces ethanol/butanol mixtures, sec-butanol, and mixtures of methyl isobutyl carbinol/isopropanol, in lacquers and thinners.

CELANESE SOLVENT 601—economical replacement MEK for vinyl and nitrocellulose applications.

CELANESE SOLVENT 901H—economical replacement for 4-, 5- and 6-carbon alcohols in lacquers and brake fluids.

SOLVENTS — DESCRIPTIVE DATA

		MOL. WT.	BOILING POINT	APHA Max. COLOR	WATER CONTENT % by Wt. Max.	FLASH POINT	ACIDITY by Wt. Max.	Wt. Lbs./Gal. @ 20°C.	SPECIFIC GRAVITY @ 20/20°C.

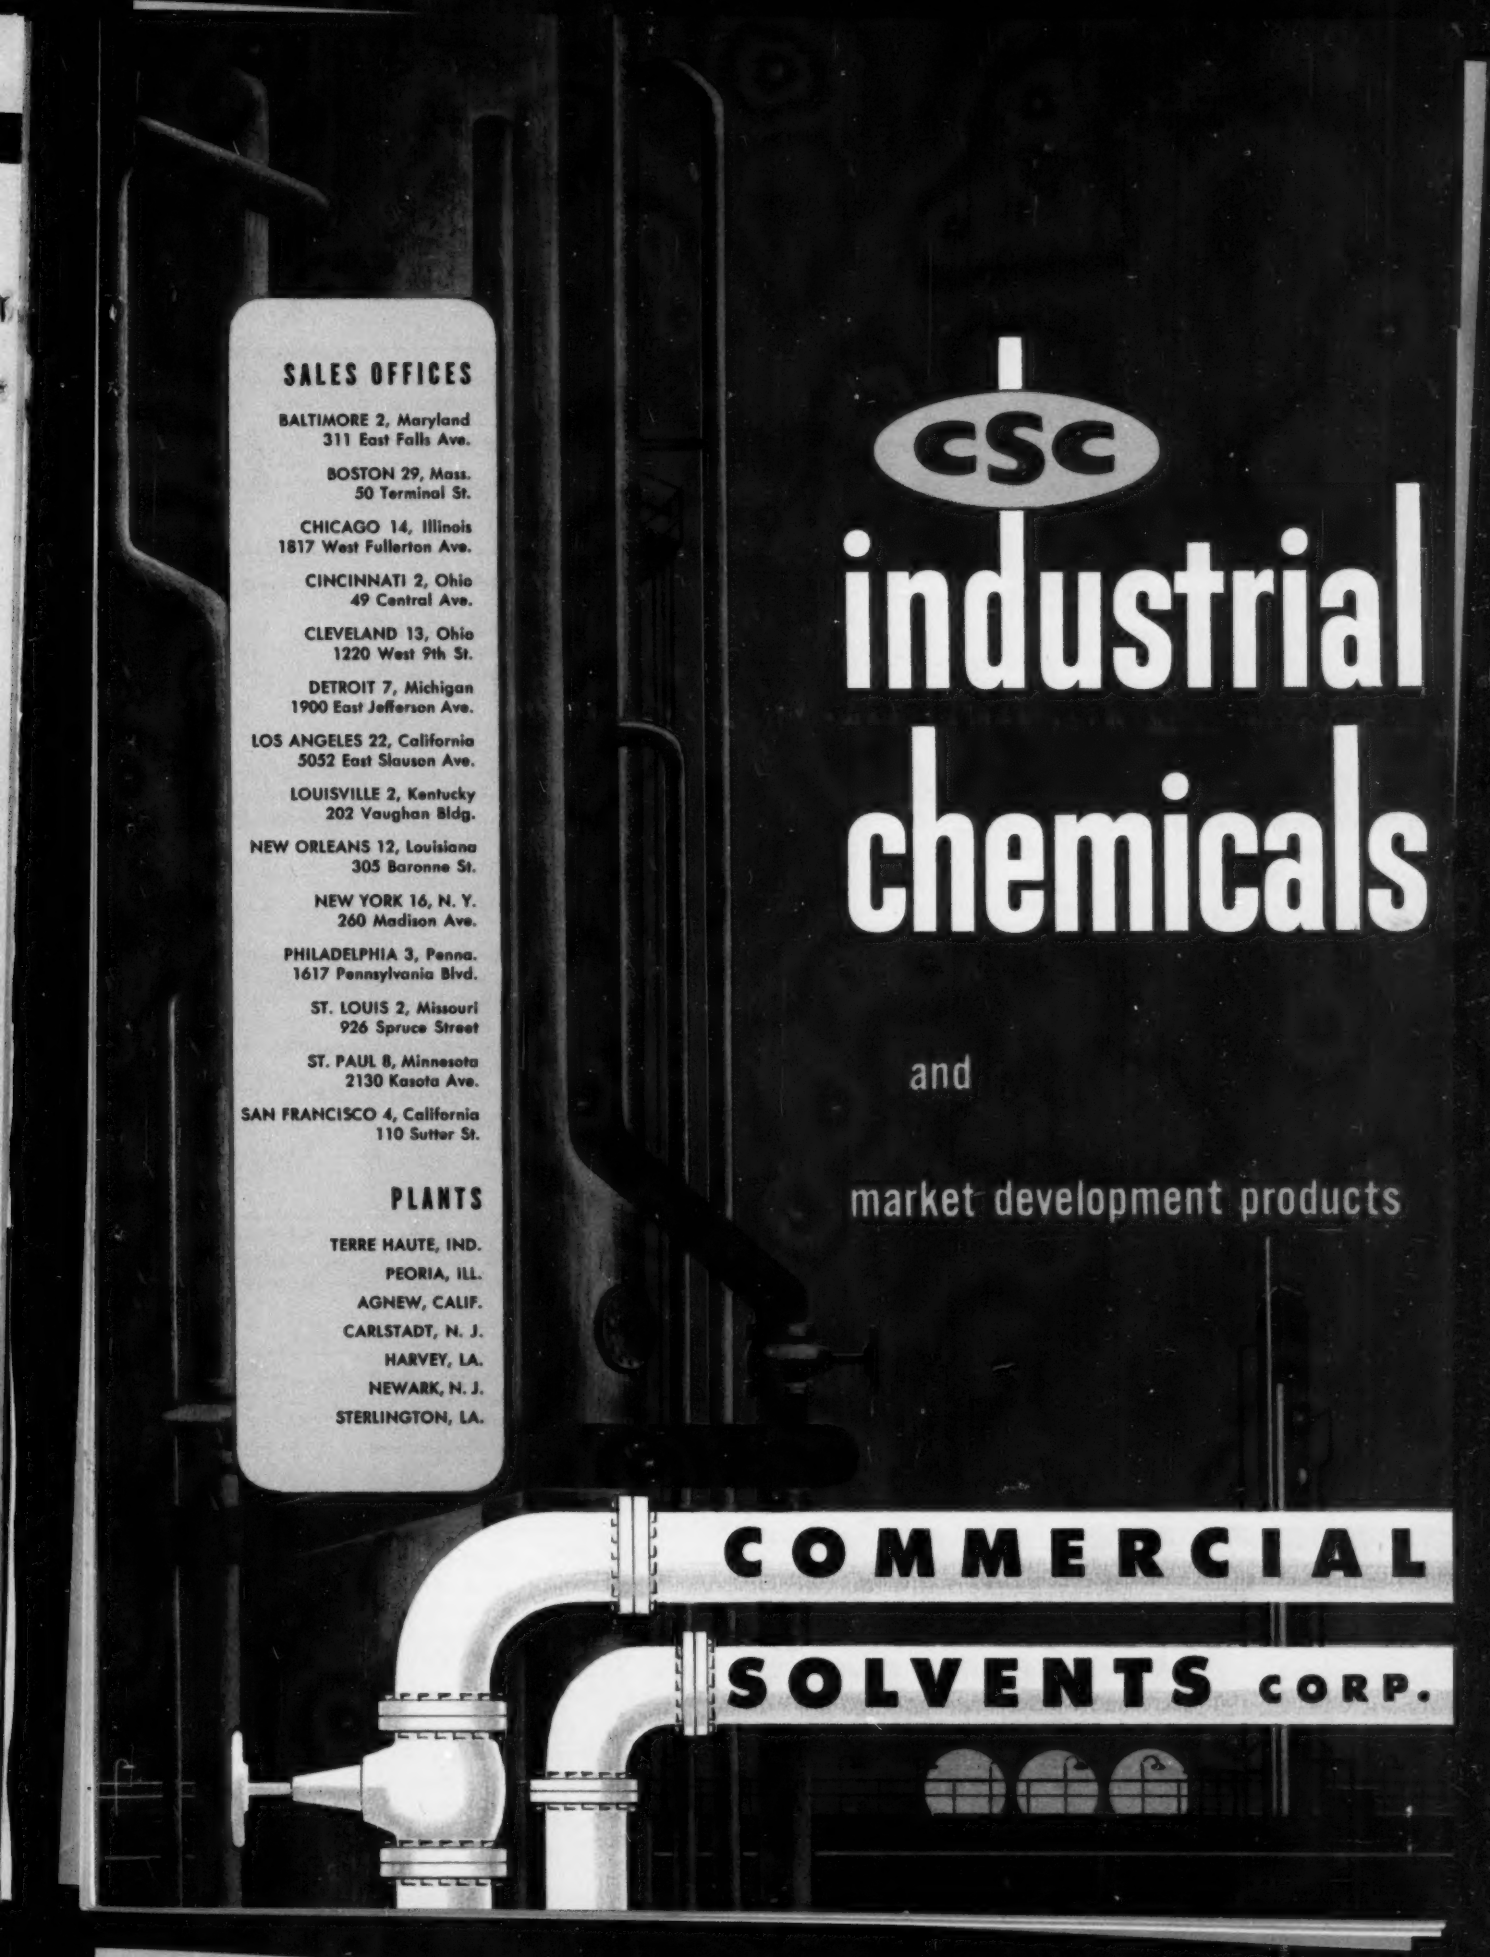
TECHNICAL SERVICE

The Celanese Technical Service and Application Laboratories, now in its new modern quarters in Summit, N. J., offers greatly expanded assistance in the development and complete testing of new and improved formulations.



Extensive technical data, bulletin, and cost analyses are available on all Celanese chemicals.

SOLVENTS CORP.

CSC products

ALCOHOLS

The hallmark of quality for over a century, there is a grade of Rossville® ethyl alcohol—either pure or modified by addition of approved denaturants—for every application. CSC's proprietary solvents are sold under the trade names Quakersol®, Shellacol®, and Fotocol®. n-Butanol, first produced in the U. S. by CSC, made possible production of modern lacquers for high-speed finishing lines. Commercial Solvents in 1927 was the first company in U. S. to market synthetic methanol. Production was greatly increased in 1947 and again more than doubled in 1953.

Butanol (n-butyl alcohol)
Ethyl Alcohol, Anhydrous (200 proof)
Ethyl Alcohol, 95% (190 proof)
Methanol

AMINES AND AMMONIA

Consumption of ammonia has been increasing tremendously both for fertilizer and industrial uses. CSC is keeping abreast with increased demand and this year is doubling its production facilities. Methylamines, derivatives of ammonia, are gases at ordinary temperatures and pressures and are highly soluble in water. Low equivalent weight and moderate price make these compounds the most economical source of the amine group. They are sold by CSC in aqueous solution at two concentrations, as well as in anhydrous form.

Ammonia, Anhydrous Liquid

Dimethylamine
Monomethylamine
Trimethylamine

AMINOHYDROXY COMPOUNDS

Fatty acid soaps of AMP are powerful emulsifying agents for oil-in-water emulsions such as bright-drying floor waxes. Soaps of AMPD are recommended for preparations of cosmetic creams and lotions.

2-Amino-2-methyl-1, 3-propanediol
2-Amino-2-methyl-1-propanol

ESTERS

These derivatives of ethyl, butyl and amyl alcohols offer a wide choice of properties for highly diversified uses. All are used in large quantities as solvents and plasticizers, while the pleasant aroma of the ethyl and amyl acetates has made them useful in synthetic flavors and perfumes. Ethyl acetate is an excellent solvent for many materials and is widely used where a low-cost, rapidly evaporating solvent is required. Butyl acetate has long been the industry standard as the ideal solvent for use in nitrocellulose lacquers. Its strong solvent power permits maximum use of latent solvents and diluents. Its ideal rate of evaporation promotes good flow, rapid drying and hardening of the film and minimizes blushing and orange peel. Dibutyl phthalate is the standard solvent-type plasticizer for lacquers as well as many plastics. Tributyl phosphate is a slightly volatile liquid with physical properties which have led to widely divergent uses ranging from selective solvent to anti-foam agent.

Amyl Acetate (90% min.)
Butyl Acetate (90%-92%)
Butyl Lactate (>95%)
Butyl Stearate
Dibutyl Phthalate (>99%)
Diethyl Oxalate
Ethyl Acetate (85%-88%)
Tributyl Phosphate

HYDROXYLAMINE SALTS

The availability of these three salts at moderate prices has resulted in the rapidly increasing use of hydroxylamine as a commercial chemical. Its unique properties make it of interest to chemists in every industry.

Hydroxylammonium Acid Sulfate
Hydroxylammonium Chloride
Hydroxylammonium Sulfate

NITROPARAFFINS

The nitroparaffins are versatile solvents of medium evaporation rate and useful raw materials for synthesis. The nitropropanes in particular are excellent solvents for a variety of coating materials. With vinyl resins they give lower viscosity solutions than do ketones and, with alcohols, the NP's make possible the formulation of cellulose acetate spray lacquers equivalent in flow and drying characteristics to nitrocellulose lacquers.

Nitroethane
Nitromethane
1-Nitropropane
2-Nitropropane

OTHER CHEMICALS

Now a large volume industrial chemical, high quality acetone was first made available to American industry by CSC.

Alkaterge-C is a cationic surface-active agent continually finding new industrial uses.

Formaldehyde and pentaerythritol are made by CSC at Agnew, Calif., for West Coast use. The former is available in inhibited and uninhibited grades at a concentration of 37% by weight.

Although CSC did not market U.S.P. riboflavin until 1945, it was the first company to synthesize riboflavin biologically and make it available in the form of concentrates. A highly soluble crystalline form was first marketed by CSC in 1949.

Acetone
Alkaterge®-C
Benzyltrimethylammonium Chloride[e]

uses

BUTANOL— Nitrocellulose and other cellulose ester lacquers, dopes and thinners; urea-formaldehyde resins, vinyl acetate; inks, hydraulic fluids, cleaners; as an *extractant*, *dehydrating agent*, *defrother*, *solvent*, and as a chemical *raw material*.

ETHYL ALCOHOL—Cosmetics, pharmaceuticals, lacquers, inks, plastics, adhesives; *raw material* in manufacture of vinegar, esters, butadiene; *fuel*; used as *extractant* and *drying agent*.

METHANOL—Stains, coatings, cleaners, and *anti-freeze* solutions; *raw material* for manufacture of formaldehyde, amines, esters; used as *precipitant*, *extractant*, and for many other solvent purposes.

AMMONIA, ANHYDROUS, LIQUID— Low cost *neutralizing agent; manufacture* of dyes, explosives, resins, synthetic fibers, fertilizers, rubber chemicals, fungicides, antiseptics, textile chemicals.

DIMETHYLAMINE—*Stabilizing agent* in latex and *solubilizing agent* for 2, 4-D; synthesis of rubber accelerators, surface-active agents, fungicides, pharmaceuticals, and dyestuffs.

MONOMETHYLAMINE—*Synthesis* of surface-active agents, dyestuffs, explosives, pharmaceuticals; organic *neutralizing agent*.

TRIMETHYLAMINE—*Synthesis* of various products including quaternary ammonium compounds; *warning agent* in toxic or flammable gases.

AMINOHYDROXY COMPOUNDS—*Raw materials* for synthesis; *emulsifying agents* in forms of their soaps; *stabilizers* in urea-formaldehyde and melamine finishes; raw materials for textile specialties, drying oils, and synthetic resins.

AMYL ACETATE—*Solvent* for nitrocellulose, ethyl cellulose, chlorinated rubber; *flavoring agent*.

BUTYL ACETATE— High boiling *solvent* in nitrocellulose lacquers, dopes, and thinners; solvent in inks, adhesives, cleaning fluids, leather finishes, plastic films. *Selective solvent* as in isolation of penicillin.

BUTYL LACTATE—Super high boiling *solvent* in lacquers; *manufacture* of inks, adhesives, resins and enamels.

BUTYL STEARATE—High boiling *waterproofing agent; stripping compositions* and in cosmetics, shaving creams, cleaners, polishes.

DIBUTYL PHTHALATE—Standard *plasticizer* in nitrocellulose lacquers; used in adhesives, molded products and in vinyl resin finishes.

DIETHYL OXALATE—*Color stabilizer* in ethyl cellulose hot melt coatings; *raw material* for synthesis of dyestuffs and barbiturates.

ETHYL ACETATE—*Solvent* for cellulose esters and ethers; *manufacture* of lacquers and dopes, inks, adhesives, cleaners and duplicator fluids. High purity grade available for drugs and food products.

TRIBUTYL PHOSPHATE—Highly efficient *anti-foam agent* for use in water-based paints; *pigment grinding assistant*; improves adhesion of lithograph inks on metal surfaces; powerful *solvent* for 2, 4-D.

HYDROXYLAMINE SALTS—Powerful *reducing agents* and useful for chemical *synthesis;* used in *manufacture* of dyes, pharmaceuticals, rust and polymerization inhibitors, rubber chemicals and photographic chemicals; *laboratory reagent*.

NITROPARAFFINS—Excellent *solvents* for cellulose esters and vinyl resins; useful *raw material* for synthesis; nitromethane is an excellent *selective solvent;* it is also used in special racing *fuels*.

ACETONE—Basic material for *manufacture* of numerous organic chemicals. Useful in *refining* and *purification* processes. Manufacture of rayon, cellulose ester dopes, plastics and cements, paint and varnish removers.

ALKATERGE®-C-Oil-soluble *surface active agent, emulsion stabilizer,* and *acid acceptor; pigment grinding assistant* and *dispersing agent; anti-foam agent*. Used in metal cleaners, lubricants, wool-scouring.

BENZYLTRIMETHYLAMMONIUM CHLORIDE—Cellulose purification, *catalyst* in production of phenolic resins, reclaiming of scrap rubber.

FORMALDEHYDE—*Manufacture* of phenol-, urea-, and melamine-formaldehyde resins; used in the *synthesis* of pentaerythritol, hexamethylene tetramine, dyestuffs, pharmaceuticals; a *disinfectant* and *fumigant*, and *hardening agent* for protein.

PENTAERYTHRITOL—Increasingly important *raw material* in the manufacture of alkyd resins, rosin esters and explosives.

RIBOFLAVIN, U.S.P. AND R.S., U.S.P.—For fortification of *foodstuffs* and in pharmaceutical preparations.

MARKET DEVELOPMENT CHEMICALS

available in experimental quantities

AMINES

Furfurylamine (2-furanmethylamine) $C_4H_3OCH_2NH_2$

Density at 25 °C (pure material) 1.0502
Boiling Point at 760 mm (pure material) . . . . . 145–146 °C
Melting Point . . . . . –70 °C approx.

Highly reactive heterocylic compound. Undergoes reactions typical of primary amines. Properties suggest application in the synthesis of dyestuffs, resins, pharmaceuticals, rubber, and petroleum additives.

2-Hydroxyethyltrimethylammonium bicarbonate (45% aqueous solution) $(CH_3)_3N(HCO_3)CH_2CH_2OH$

Freezing Point (45% solution) . . . . . –21.3 °C
Refractive Index n_D at 25 °C (45% solution) 1.3967

This quaternary ammonium salt appears to offer many possibilities as a latent alkaline catalyst for resins and other processes. Also as an intermediate for preparing choline salts.

AMINOHYDROXY COMPOUNDS

2-Amino-1-butanol $CH_3CH_2CHNH_2CH_2OH$

Sp. Gr. at 20/20 °C 0.944
Boiling Point at 760 mm . . . . . 178 °C
Melting Point . . . . . –2 °C

These compounds readily undergo a wide variety of reactions. They form substituted amides with acids, esters, anhydrides and acyl halides. They also react with other compounds including alkyl halides, aldehydes, ketones, and carbon disulfide.

2-Amino-2-ethyl-1,3-propanediol $CH_2OHC(C_2H_5)(NH_2)CH_2OH$

Sp. Gr. at 20/20 °C 1.099
Boiling Point at 10 mm . . . . 152–153 °C
Melting Point . . . . . 37.5–38.5 °C

The alkanolamines provide raw materials for synthesis, emulsifying agents in forms of their soaps, raw materials for textile specialties, drying oils, and synthetic resins.

Tris(hydroxymethyl) amino methane $(CH_2OH)_3CNH_2$

Boiling Point at 10 mm . . . . 219–220 °C
Melting Point . . . . . 171–172 °C

N-Methylglucamine $CH_3{\cdot}NH{\cdot}CH_2(CHOH)_4{\cdot}CH_2OH$

Melting Point . . . . . 128–129 °C

N-Methylglucamine is a polyhydroxyamine with properties that suggest application in the synthesis of surface-active agents, pharmaceuticals, dyeing assistants and other fields. It undergoes many reactions typical of secondary amines. It is soluble in water, and pH of a 1% aqueous solution at 25 °C is 10.5.

AMIDES

Dimethylformamide $H{\cdot}CO{\cdot}N(CH_3)_2$

Density at 25 °C 0.9445
Boiling Point at 760 mm . . . . . 153 °C
Melting Point . . . . . –61.0 °C

A powerful solvent for a wide variety of materials including nitrocellulose, cellulose acetate, cellulose triacetate and vinylite resins. It exhibits selective solvent properties—its low volatility and stability to heat facilitate easy, low-loss recovery. It possesses outstanding solvent properties for many common gases.

CHLORONITROPARAFFINS

1-Chloro-1-nitropropane $CH_3CH_2CHClNO_2$

Sp. Gr. at 20/20 °C 1.209
Distn. Range (90%) . . . . 139.5–143.3 °C

2-Chloro-2-nitropropane $CH_3CClNO_2CH_3$

Sp. Gr. at 20/20 °C 1.193
Distn. Range (90%) 129.0–132.3

1, 1-Dichloro-1-nitroethane $CH_3CCl_2NO_2$

Sp. Gr. at 20/20 °C 1.405
Distn. Range (90%) . . . . 122.0–125.0 °C

1, 1-Dichloro-1-nitropropane $CH_3CH_2CCl_2NO_2$

Sp. Gr. at 20/20 °C 1.314
Distn. Range (90%) . . . . . 141–143.6 °C

This versatile group comprises stable liquids miscible with most organic solvents, including the lower alcohols, glycols, esters, ethers, petroleum hydrocarbons, mineral oils, and vegetable oils. The chloronitroparaffins are excellent as solvents for fats and waxes and as anti-gelling agents in certain types of rubber cement.

Of this group 1, 1-dichloro-1-nitroethane is a powerful fumigant for insect pests attacking stored furs, tobacco, and a variety of foodstuffs.

NITROHYDROXY COMPOUNDS

2-Nitro-1-butanol $CH_3CH_2CHNO_2CH_2OH$

Boiling Point at 10 mm . . . . . 105 °C
Melting Point . . . . . –47 to –48 °C

2-Nitro-2-ethyl-1,3-propanediol $CH_2OHC(C_2H_5)NO_2CH_2OH$

Melting Point . . . . . 56–57 °C

2-Nitro-2-methyl-1,3-propanediol $CH_2OHC(CH_3)NO_2CH_2OH$

Melting Point . . . . . 147–149 °C

2-Nitro-2-methyl-1-propanol $CH_3C(CH_3)NO_2CH_2OH$

Melting Point . . . . . 90–91 °C

Tris (hydroxymethyl) nitromethane $(CH_2OH)_3CNO_2$

Melting Point . . . . . 165–170 °C

Of particular interest in chemical synthesis. One compound of this group has shown usefulness as a heat sensitizer for rubber latex; another as a high-boiling solvent for zein, cellulose acetate, and oil-soluble dyes. They are also useful as mild oxidizing agents.

POLYSACCHARIDES

Native Dextran, 1,6′ α-pyranose polymer

Native dextran is currently being evaluated in the fields of food, cosmetics, paper, pharmaceuticals, textiles, and printing. In these applications, it is being tested as a thickening agent to increase viscosity and to aid in suspension of solids.

SURFACE-ACTIVE AGENTS

Alkaterge-A,® Alkaterge-E,® Alkaterge-T®

This group comprises three new substituted oxazolines. They are cationic, oil-soluble, surface-active agents similar in structure and properties to the established surface-active agent, Alkaterge-C. The new products should prove valuable as auxiliary emulsification agents, spreading agents, pigment-grinding assistants, defoaming agents and dispersing agents.

Glucaterges®

These additions to the class of non-ionic surface-active agents are prepared from fatty acids and a polyhydroxy amine. They exhibit a unique combination of properties which suggests new possibilities for ideal performance characteristics under a wide range of conditions.

The outstanding foaming properties, excellent detergency, and good "feel" of Glucaterge-12 suggest applications in hair shampoos, shaving creams, and other cosmetic products. Also, this product is an emulsifying agent for hydrocarbon emulsions, and a dispersing agent for carnauba wax. Tests indicate its usefulness as a wool detergent.

Low-foaming detergent Glucaterge-28 possesses characteristics that recommend its use for mechanical dishwashing compounds and other applications where low-foaming properties combined with strong detergency are desirable. It is a useful component of soap products for hard-water areas, and can also be used to advantage in formulating specialty cleaners such as used on woodwork, walls, glass and tile.

Sixth Ave.; Seattle — 821 Second Ave.

Firestone EXON

...versatile vinyl resins

You can avail yourself of these processing advantages by selecting the proper Firestone Exon Resin for your product

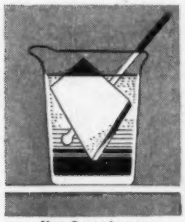
Machinability

Weldability

Physical Toughness

EXON 400 XR-61 . . . a thermoplastic, non-inflammable, extremely inert, fluorinated resin. Solution coatings can be used in contact with a range of acids, alkalies and salt solutions . . . have excellent light and heat stability, good adhesion to metal, low moisture vapor transmission, low water absorption, good flexibility.

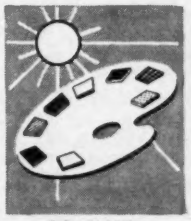
EXON 450 . . . vinyl chloride copolymer of lower molecular weight. Can be used as a soft compounding resin or alone to produce rigid vinyl sheeting. Widely used in the production of plastics.



EXON 500 . . . high molecular weight polyvinyl chloride resin. Excellent electrical properties, color, heat and light stability, physical toughness and chemical inertness. Excellent material for wire insulation.

you can count on for quality

EXON 402A...*a completely reliable source for unplasticized P.V. C.*



You are assured of the results you want in your unplasticized P.V.C. applications... when you specify Firestone Exon 402A. The unplasticized P.V.C. that you produce from Exon 402A is a product with outstanding workability and versatility. It can be welded, sawed, sheared, stamped, milled, planed, drilled, embossed, rolled, cemented... and is easily worked on conventional wood and metal working equipment. You will find Exon 402A inexpensive and easy to process. It is recommended for use in unplasticized compounds for rigid applications.

Non-Corrosiveness

Electrical Properties

Color Stability

Heat & Light Stability

Chemical Inertness

EXON 654 . . . stir-in type of plastisol resin which disperses readily in plasticizer to produce pastes with desirable processing characteristics. Excellent heat and light stability, physical toughness and chemical resistance.

EXON 700 XR-59 . . . a latex, made from a vinyl chloride polymer resin, possessing excellent mechanical stability. Extremely adaptable to film forming and impregnation operation. Films cast from this latex exhibit good heat and light stability.

EXON 800 XR-60 . . . a modified styrene compound especially designed for injection molding. Easily processed by using conventional molding equipment. Wide range of pastel and solid colors may be obtained.

EXON 800 XR-63 . . . a modified styrene resin, especially designed for calendering, laminating and forming. Easily processed by using conventional banburys, mills and calenders. Wide range of pastel and solid colors may be obtained by blending dry pigments with resin.

EXON 900A . . . a high molecular weight polyvinyl chloride resin. Excellent color, light and heat stability, physical toughness, chemical inertness and ease of processing. Perfect for applications where surface appearance is important.

EXON 905, 915 and 925 cover a processing temperature range from 275°F to 375°F. All you need do is select the correct Exon resin for your equipment . . . and you are automatically assured of an easier, faster operation and a finer final product.

For complete information on the entire line of Firestone EXON Resins,

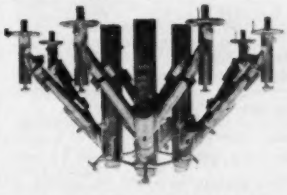
Socony-Vacuum demanded PRECISION!

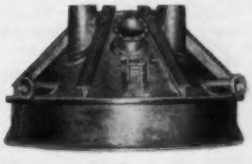
...and called on GRAVER

CRAFTSMANSHIP



For years Graver has been a leading producer of specialized fabrications for the petroleum industry. One of the reasons why can be seen in the various units Graver has built for Socony-Vacuum's Thermofor Catalytic Cracking installations. These installations incorporate their exclusive air-lift design for which Graver constructed the intricate fabrications pictured on the right.

These units are essential parts of a revolutionary design, the features of which Socony-Vacuum has recently adapted to small refineries, employing the same general principles.



Thus does Industry continue to depend on Graver for superior craftsmanship in steel plate fabrication.

The Bag Closing Machine With a Real

There's an extra PLUS built into every model ET BAGPAKER delivered . . . the PLUS of assured day-in, day-out top performance.

The Model ET ties in with your existing filling and weighing equipment...closes open-mouth, multiwall paper bags semi-automatically... gives you sift-free, stronger, more economical bag closures with the famous BAGPAK cushion stitch.

You can count on the model ET BAGPAKER to give you faster packaging and better product protection...at lower cost.

Model ET applies famous "Cushion-Stitch" over dry tape for sift-proof closure. Model E-1 applies "Cushion-Stitch" only, for use where sift-proofing is not essential.

Check these Economy and Efficiency Features:

- ✚ *Closes 15 filled bags a minute.*
- ✚ *Fast adjustment to bags from 25 to 100 lbs.*
- ✚ *Completely portable—rolls to any packaging station.*
- ✚ *Bag starts and stops serving head when equipped with automatic control.*
- ✚ *Hoepner No. 150 Heavy Duty Sewing Head with automatic brake to prevent "coasting".*

Bagpakers available include models A, D-A, ET, E-I and F-I—with capacities from 60 tons per hour for the Model "A" to the small F-I where large volume is not required.

Write today for details, drawings and capacities to Bagpak Division, International Paper Co., 220 E. 42nd St., N.Y. 17, N.Y., Dept.

Jefferson
CHEMICAL COMPANY, INC.
260 MADISON AVENUE, NEW YORK 16, N. Y.

ETHYLENE OXIDE

DESCRIPTION . . . a colorless gas at room temperature and atmospheric pressure. At lower temperatures or at higher pressures it becomes a water-white liquid.

FOR USE AS . . . a starting material for the manufacture of acrylonitrile and nonionic surface active agents; a sterilizing agent and fumigant; and, in general, a very reactive chemical intermediate.

CONTAINERS . . . 4,000 and 10,000-gal. tank cars (I.C.C. Spec. 104 AW) and 400-lb. drums (I.C.C. Spec. 5P). I.C.C. label: Red

SALES SPECIFICATIONS . . . .

Water	0.25 wt. % max.
Aldehyde as Acetaldehyde	0.10 wt. % max.
Acidity as Acetic Acid	0.01 wt. % max.
Nonvolatile Residue	0.02 gm. per 100 ml. max.
Residual Odor	none
Appearance	water-white and substantially free of suspended matter

ETHYLENE GLYCOL

$HO\text{-}CH_2\text{-}CH_2\text{-}OH$

DESCRIPTION . . . a clear, water-white, practically odorless, hygroscopic liquid.

FOR USE AS . . . a permanent-type antifreeze; a heat transfer medium; a raw material in the manufacture of low-freezing dynamite; a starting material for the production of synthetic fibers and alkyd resins; a plasticizer; a constituent of hydraulic fluids; and a general solvent and chemical intermediate.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars and 55-gal. (500 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: None

SALES SPECIFICATIONS . . .

Water	0.5 wt. % max.
Acidity as Acetic Acid	0.01 wt. % max.
Ash	0.01 wt. % max.
Color, Pt-Co Scale	25 max.
Specific Gravity (15.6/15.6°C)	1.116 min.; 1.119 max.
Appearance	Substantially free of suspended matter
Boiling Range, ASTM, °C	IBP: 190° min.; EP: 210° max.

NOTE: *Jefferson Ethylene Glycol for antifreeze and other special uses is supplied with different specifications according to use requirements.*

DIETHYLENE GLYCOL $HO\text{-}CH_2\text{-}CH_2\text{-}O\text{-}CH_2\text{-}CH_2\text{-}OH$

DESCRIPTION . . . a clear, water-white, water-miscible liquid. It is hygroscopic and noncorrosive.

FOR USE AS . . . a dehydrating agent for natural gas; a moistening agent for tobacco, glue, and gelatin; a textile lubricant and coupling agent; a solvent in textile dyeing and printing; a constituent of hydraulic fluids; a chemical intermediate.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars; 55-gal. (500 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: None

SALES SPECIFICATIONS . . .

Water	0.30 wt. % max.
Acidity as Acetic Acid	0.02 wt. % max.
Ash	0.10 wt. % max.
Color, Pt-Co Scale	50 max.
Specific Gravity (15.6/15.6°C)	1.119 min.; 1.122 max.
Appearance	Substantially free of suspended matter
Boiling Range, ASTM, °C	IBP: 235° min.; EP: 255° max.

ETHYLENE DICHLORIDE $Cl\text{-}CH_2\text{-}CH_2\text{-}Cl$

DESCRIPTION . . . a colorless liquid with a chloroform-like odor.

FOR USE AS . . . an ingredient of tetraethyl lead fluid; a solvent for fats, oils, and waxes; a metal degreaser; a spotting agent for textile cleaning; a chemical intermediate for use in resin manufacture and in other processes.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars; 55-gal. (550 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: Red

SALES SPECIFICATIONS . . .

Acidity as HCl	0.001 wt. % max.
Specific Gravity (15.6/15.6°C)	1.2606 min.; 1.2626 max.
Appearance	Substantially free of suspended matter
Color, Pt-Co Scale	10 max.
Boiling Range, ASTM, °C	1.5° including 83.5°

NONYL PHENOL HO  C_9H_{19}

DESCRIPTION . . . a mixture of monoalkyl phenols, predominantly para-substituted. It is a pale yellow liquid of relatively high viscosity with a slight phenolic odor.

FOR USE AS . . . an anionic and nonionic surface active agent intermediate; a starting material for the manufacture of lubricating oil additives, stabilizers, petroleum demulsifiers, oil-soluble phenolic resins and plasticizers.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars and 55-gal. (410 lb. net) drums. I.C.C. label: None

SALES SPECIFICATIONS . . .

Hydroxyl Number	245 min.; 258 max.
Boiling Range, ASTM, °C (760 mm)	IBP: 287° min.; 5%: 290° min.; 95%: 302° max.
Specific Gravity (20/20°C)	0.94 min.; 0.95 max.
Color, Pt-Co Scale	300 max.
Appearance	Clear and substantially free of suspended matter

MONOETHANOLAMINE $HO\text{-}CH_2\text{-}CH_2\text{-}NH_2$

DESCRIPTION . . . a clear, water-white, hygroscopic liquid with a distinct ammoniacal odor.

FOR USE AS . . . a gas scrubbing agent for recovery of hydrogen sulfide and carbon dioxide; as a chemical intermediate in the manufacture of various surface active agents, rubber chemicals, and other materials; an agent in the manufacture of antibiotics.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars; 55-gal. (460 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: None

SALES SPECIFICATIONS . . .

Specific Gravity (20/20°C)	1.017 min.; 1.027 max.
Boiling Range, °C	IBP: 160° min.; EP: 176° max.
Equivalent Weight	61.0 min.; 63.0 max.
Color, Pt-Co Scale	20 max.

DIETHANOLAMINE $HO\text{-}CH_2\text{-}CH_2\text{-}NH\text{-}CH_2\text{-}CH_2\text{-}OH$

DESCRIPTION . . . a clear, colorless, hygroscopic liquid with a mild ammoniacal odor at higher than room temperature. At room temperature it is a white crystalline solid.

FOR USE AS . . . an intermediate in the manufacture of surface active agents used in textile specialties, herbicides, petroleum demulsifiers, etc.; as a gas scrubber in refinery operations; a rubber chemicals intermediate.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars; 55-gal. (480 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: None

SALES SPECIFICATIONS . . .

Specific Gravity (30/20°C)	1.0880 min.; 1.0950 max.
Color, Pt-Co Scale	40 max.
Diethanolamine	95 wt. % min.

TRIETHANOLAMINE $N(CH_2\text{-}CH_2\text{-}OH)_3$

DESCRIPTION . . . a clear, viscous, hygroscopic liquid at room temperature with a slight ammoniacal odor.

FOR USE AS . . . an intermediate in manufacture of surface active agents used in textile specialties, waxes and polishes, herbicides, petroleum demulsifiers, toilet goods, cement additives, cutting oils, etc.; a rubber chemicals intermediate.

CONTAINERS . . . 4000, 6000, 8000 and 10,000-gal. tank cars; 55-gal. (510 lb. net) drums; and, locally, tank wagons from bulk storage terminals. I.C.C. label: None

SALES SPECIFICATIONS . . .

Specific Gravity (20/20°C)	1.1220 min.; 1.1300 max.
Color, Pt-Co Scale	450 max.
Triethanolamine	80 wt. % min.
Monoethanolamine	2.5 wt. % max.
Diethanolamine	15 wt. % max.

Jefferson chemicals detailed in this catalog . . .

Ethylene Oxide	Nonyl Phenol
Ethylene Glycol	Monoethanolamine
Diethylene Glycol	Diethanolamine
Ethylene Dichloride	Triethanolamine

Note: Sales specifications on these products are subject to change.

. . . other Jefferson chemicals

Ethylene Carbonate	Ethylene Glycol Ethers
Propylene Carbonate	Diethylene Glycol Ethers
Morpholine	Polyethylene Glycols
Diethylethanolamine	Triethylene Glycol
Hydroxyethyl Morpholine

KELLOGG — SUBSIDIARY OF PULLMAN INCORPORATED

KEL-F

*Reg. U.S. Pat. Off.

VOLUME-PRODUCTION PRICING NOW RADICALLY BROADENS SCOPE OF APPLICATIONS FOR THIS UNIQUE THERMOPLASTIC

Currently available in vastly increased volume from new mass-production facilities *at a fraction of its original cost*, Kel-F® should now prove the convenient and economically-sound specification—as well as the technically superior one—for most critical and semi-critical applications. An important economic factor which designers and engineers should evaluate carefully when making material comparisons is that only small amounts of Kel-F are required to meet the most severe service conditions . . . because of the polymer's unique properties.

LEADING MOLDERS NOW OFFER KEL-F PARTS AND BASIC MATERIALS

More than 50 leading molders in the country are prepared to deliver Kel-F tubing, rod, sheet, film and strip in a variety of sizes and types of material. Many of these are supplying not only these basic fabricating materials but are also producing finished parts by the standard methods such as compression, transfer, injection and extrusion molding.

TECHNICAL BULLETINS, SERVICES NOW AVAILABLE . . .

Detailed data—in bulletin form—on physical properties, molding techniques, dispersions and other Kel-F polymer products are available. The Chemical Manufacturing Division's Technical Service Department and Molding Research Laboratory have been augmented to offer additional help to design and materials engineers, as well as molders, in the use of this unique material.

Chemical Manufacturing Division

The* M. W. KELLOGG *Company

P. O. Box 469 • Jersey City 3, N. J.

In N. Y. WOrth 4-6775 **In N. J. DElaware 3-3100**

BASIC KEL-F MATERIALS AVAILABLE

(Order *direct* from Kellogg)

Molding Powders	Unplasticized	#300 — for high temperature service #270 — for less severe temperatures
	Plasticized	#300-P 25 . . . with 25% Plasticizer (Other plasticized compositions to order)
Dispersions		NW-25 — Flows readily at fusion temperatures N-1 — High molecular weight
Oils, Waxes and Greases		Five grades — from Light Oil to Hard Wax — are available. Details on request.

USE KEL-F when applications require —

Properties

CHEMICAL INERTNESS

No effect has been observed after prolonged exposure of Kel-F to concentrated sulfuric, hydrofluoric and hydrochloric acids; to strong caustics; to fuming nitric acid, aqua regia, hydrogen peroxide and other vigorous oxidizing materials. It is equally resistant to most organic solvents.

ELECTRICAL RESISTANCE

Kel-F has high resistance to electricity . . . is a poor conductor of heat . . . and its electrical properties are superior to most plastics. Dielectric constant is in the range of the best available materials.

ZERO MOISTURE ABSORPTION

In continuous tests, Kel-F exhibited zero water absorption. It is not wet by water . . . is unaffected by high humidity or tropical exposure.

WIDE TEMPERATURE RANGE

Kel-F performs satisfactorily over a temperature range of 710 fahrenheit degrees — from a low of —320° F (liquid nitrogen) to a high of 390° F.

MECHANICAL STRENGTH

Kel-F has high tensile strength on the order of 6000 psi at 77° F . . . excellent impact strength and abrasion resistance; compressive strength of 32,000 to 80,000 psi.

SUPERIOR MEMORY

Kel-F exhibits "cold-flow" characteristics superior to any other commercial fluoro-carbon. While it deforms slightly under pressure, it returns to original shape when pressure is released.

MOLDABILITY — MACHINABILITY

Kel-F is molded by all standard methods — compression, transfer, injection and extrusion. It is readily punched, drilled or otherwise machined to close tolerances.

PURCHASE KEL-F in any desired form —

Products

FABRICATED PRODUCTS

Gaskets
Washers
"O" Rings
"U" Packing
Valve Discs
Valve Seats
Valve Diaphragms
Pump Diaphragms
Resilient-Core "O" Rings
Hose Assemblies
Porous Filters
Drum and Tank Liners
Flexible Non-Corrosive Container
Blown Bottles
Machined Fittings
Drum Plugs

FABRICATED MATERIAL

Molded Sheets
Thickness — ¼" to ½"
Diameter—in disc form to 60"

Extruded Rod
Diameter — up to 1"
Length — to specification

Molded Rod
Diameter — up to 4"
Length—to 24"

Extruded Tubing
Diameter — up to 2"
Wall thickness — to specification
Length — to specification

Extruded Strip
Thickness — .010" to .125"
Width — 2" to 4"
Length — to specification

Thin Film
(EXTRUDED AS LAY-FLAT TUBING)
Thickness — .002" to .010"
Width — lay-flat up to 20" (total width to 40")

Extruded Wire Coatings
To specification

THE ONLY COMMERCIAL FLUORO-CHLORO-CARBON THERMOPLASTIC

WIDE VARIETY IN FORM

Kel-F is available in film, sheet, rod and tubes from recognized molders. As a dispersion for spray or dip application and in forms of oils, greases and waxes it is available direct from Kellogg.

A "BUYERS GUIDE" listing the molders, extruders, fabricators and coaters furnishing the above and other items available on request.

THE reputation earned by Metal & Thermit as specialists in this field and the high quality and uniformity for which its products are noted, are the result not only of carefully controlled production processes, but also of continuous development and research. An extensive program designed to improve current materials and to develop new products has evolved a highly diversified group of industrial chemicals for the ceramics, plating and other industries to which new and related chemicals are frequently added.

The products listed below are standard Metal & Thermit chemicals as now manufactured.

INORGANIC TIN CHEMICALS

Product	Description	Uses	Standard Packaging
STANNIC CHLORIDE (Anhydrous) (Tin tetrachloride) $SnCl_4$	Colorless fuming liquid. Soluble in cold water, alcohol, acetone, toluene carbon tetrachloride and other solvents.	Intermediate for chemicals used in lubricating oils, rubber base pigments, plastics, silk weighting. Stabilizer for perfumes and colors in soap. Sensitized paper mfr.	Returnable steel drums. 980 lbs.—100 lbs.
STANNOUS CHLORIDE (Anhydrous) $SnCl_2$ Trade name: STANNOCHLOR	White crystals. Soluble in water, alkalies, abs, alcohol, ether.	Electroplating. Immersion tinning. Stabilizer for certain pigments. Reducing agent. Stabilizer for color in soaps. Catalyst in organic reactions. Analytical reagent. Pretreatment of plastics before metallizing.	Fibre drums. 100 lbs.—400 lbs.
STANNOUS SULFATE $SnSO_4$	White crystals. Soluble in water.	Acid electroplating of tin. Alloy finish. For drawing and finishing steel wire.	Fibre drums. 400 lbs.—100 lbs.
STANNIC OXIDE (White tin oxide) SnO_2	White powder. Insoluble in water, alkalies or acids.	Ceramic glaze opacifier. Production of green, yellow, blue, red, pink, maroon ceramic colors. Opacifier for sheet steel enamels. Polishing agent for granite, marble, onyx optical glass and plastics.	Fibre drums. 400 lbs.—100 lbs.—50 lbs.—25 lbs.
STANNOUS OXIDE (Black tin oxide) SnO	Black crystalline powder. Soluble in acids.	Intermediate for making stannous salts for various industries including plating and glass manufacture.	Fibre drums. 100 lbs.—400 lbs.
SODIUM STANNATE $Na_2Sn(OH)_6$ ($Na_2SnO_3 \cdot 3H_2O$)	White to light tan crystals. Soluble in water.	Alkaline electroplating of tin. Stabilizer for hydrogen peroxide.	Non-returnable steel drums. 350 lbs.—100 lbs.
POTASSIUM STANNATE $K_2Sn(OH)_6$ ($K_2SnO_3 \cdot 3H_2O$)	White to light tan crystals. Soluble in water.	High speed alkaline, electroplating of tin.	Non-returnable steel drums. 350 lbs.—100 lbs.
BARIUM STANNATE* $BaSnO_3$	White powder.	Manufacture of high dielectric ceramic insulators.	Wooden kegs—100 lbs.

NOTE (*) OTHER METALLIC STANNATES ALSO ARE AVAILABLE

ORGANIC TIN CHEMICALS

DIBUTYL TIN DICHLORIDE $(C_4H_9)_2SnCl_2$	Light tan crystalline solid. Soluble in ether, benzene, alcohols, organic esters, aliphatic hydrocarbon solvents. Insoluble in water.	Intermediate for chemicals used as stabilizers for chlorinated organic chemicals and lubricating oil additives.	Returnable steel drums. 200 lbs.
DIBUTYL TIN DILAURATE $(C_4H_9)_2Sn(O_2C(CH_2)_{10}CH_3)_2$	Colorless, soft crystals. Soluble in petroleumether, benzene, acetone, carbon tetrachloride, ether, organic esters. Insoluble in water and methyl alcohol.	Stabilizer for chlorinated organic materials.	Carboys. 45 lbs.—90 lbs. Steel drums. 400 lbs.
DIBUTYL TIN DIACETATE $(C_4H_9)Sn(OCCH_3)_2$	Clear, yellowish liquid. Soluble in most organic solvents. Insoluble in water.	Stabilizer for chlorinated organic materials.	Carboys. 45 lbs.—90 lbs. Steel drums—400 lbs.
DIBUTYL TIN OXIDE $(C_4H_9)_2SnO$	White amorphous powder. Soluble in various alcohols and other solvents. Insoluble in water.	Stabilizer for chlorinated organic materials.	Fibre drums. 10—30—70 lbs. Steel drums. 250 lbs.
DIBUTYL TIN MALEATE $(C_4H_9)_2SnC_4H_2O_4$	White amorphous powder. Soluble in benzene, ethyl alcohol and organic esters. Insoluble in water.	Stabilizer for chlorinated organic materials.	Fibre drums. 10—30—70 lbs. Steel drums. 250 lbs.

ANTIMONY CHEMICALS

ANTIMONY OXIDE (Antimony Trioxide) Sb_2O_3	White powder. Soluble in aqeous HCl, KOH, tartaric acid.	Opacifier for enamel glazes. Fire-resisting component for paints, plastics and fabric coatings.	Paper lined burlap bags. 100 lbs.
SODIUM ANTIMONATE (Sodium Meta-antimonate) $NaSbO_3$	White crystalline powder.	Opacifier for enamels for cast iron and sheet steel.	Paper lined burlap bags. 100 lbs.
POTASSIUM PYROANTIMONATE $K_2H_2Sb_2O_7 \cdot 4H_2O$	White crystalline powder. Soluble in water.	Paper and textile manufacturer. Starch sizes.	Fibre drums. 350 lbs.

ZIRCONIUM COMPOUNDS

ULTROX $ZrSiO_4$	White powder.	Opacifier in glazes for vitreous sanitary ware, wall tile, stone ware, glazed brick, terra cotta, art ware and special porcelains.	Fibre drums. 100 lbs.—400 lbs. Paper bags. 100 lbs.
ZIRCON $ZrSiO_4$	White crystalline powder.	Ingredient of enamels, electrical porcelains, refractories and other ceramic specialties.	Paper bags. 100 lbs.

Metasap Stearate Service is "at your elbow" wherever you may be located in the United States. Our representatives and warehouses from coast to coast are ready to serve you promptly when you telephone, wire, or write; and our Technical Service Division stands prepared to tackle your production problems, and make recommendations based on your specific needs.

The following list of Metasap products, and brief summary of applications, indicate the wide range of industries served by Metasap and the remarkable versatility of Metasap Metallic Soaps.

COMPOUND	CHEMICAL TYPE	MELTING POINT	MOISTURE	WASHED ASH	SOLUBLE ASH	FREE STEARIC ACID	FINENESS	SOLUBILITY	APPLICATIONS
Aluminum Stearate GM	Aluminum	155°C.	<1.0%	10.0%	1.0%	6.0%	95%-200 mesh	B*, MS*, P*	A-1-2-4-5; D-1; G-1
Aluminum Stearate R	Aluminum	145°C.	<1.0%	8.0%	0.6%	10.0%	95%-200 mesh	B*, MS*, P*	A-1-2-3-4-5; B-2; D-1-2; E-2; F-2; H
Aluminum Stearate V	Aluminum	100°C.	<1.0%	6.0%	0.6%	25.0%	98%-200 mesh	B*, MS*, P*	E-2-3; F-1; G-2
Aluminum Stearate XX	Aluminum	115°C.	<1.0%	7.0%	0.5%	15.0%	95%-200 mesh	B*, MS*, P*	F-1
Metasap 537	Aluminum	160°C.	<1.0%	10.0%	1.0%	5.0%	90%-200 mesh	B*, MS*, P*	A-1; E-1
Metasap 569	30% Aluminum Solution	—	—	—	—	—	———	—	A-2; D-2
Metasap 571	Aluminum	100°C.	1.0%	6.0%	1.0%	10.0%	80%-200 mesh	B*, MS*, P*	D-2
Metasap 579	30% Aluminum Solution	—	—	—	—	—	———	—	A-2; D-2; F-2
Metavis 540	Aluminum	—	<1.0%	—	—	—	———	B*, MS*, P*	A-1
Metavis 543	Aluminum	—	<1.0%	—	—	—	———	B*, MS*, P*	A-1
Metasap 598	Aluminum	160°C.	<1.0%	9.8%	1.0%	5.0%	99%-200 mesh	B*, MS*, P*	A-1; E-1
Barium Stearate	Barium	160°C.	0.5%	27.0%	1.0%	—	100%-200 mesh	Insoluble	A-1-3; B-1; C
Calcium Stearate	Calcium	150°C.	2.5%	9.5% ash	—	—	100%-325 mesh	Insoluble	A-3; B-1-2-3; D-1-2; E-2; H
Lead Stearate	Lead	100°C.	2.0%	28.0%-(Pb)	—	—	99%-325 mesh	Insoluble	B-1-4; C
Lithium Stearate	Lithium	220°C.	<1.0%	12.5% (Crude)	—	—	95%-325 mesh	B*, MS*, P*	A-1-3; B-1; E-1
Magnesium Stearate	Magnesium	145°C.	2.5%	8.0%	0.6%	—	100%-325 mesh	Insoluble	B-1-3; D-3; H
Zinc Stearate	Zinc	115°C.	<0.5%	15.5%	0.5%	—	100%-325 mesh	Insoluble	A-2; B-1-4; C; E-3; F-1; H
Zinc Stearate USP	Zinc	119°C.	<0.5%	15.0%	0.3%	—	100%-325 mesh	Insoluble	B-1-4; E-3; F-1
Metasap 546	Zinc	118°C.	<0.5%	15.5%	0.3%	—	100%-325 mesh	Insoluble	B-4
Metasap 574-A	Zinc	118°C.	<0.5%	15.5%	0.5%	—	100%-325 mesh	Insoluble	A-2; B-1-4; C; E-3; F-1; H
Metasap 576	Zinc	117°C.	<0.5%	15.5%	0.5%	—	100%-325 mesh	Insoluble	A-2; B-1-4; C; E-3; F-1; H
Aluminum Palmitate	Aluminum	—	—	—	—	—	———	—	A-2-5; D-2; G-1
Zinc Palmitate	Zinc	—	—	—	—	—	———	—	F-1; G-1

*Solubility Key: B-Benzol, MS-Mineral Spirits, P-Paraffin Oil, *-Gels.*

Metasap Stearates help to step up output, promote economies, and improve products. Full information about these quality soaps is yours for the asking—and we'll gladly work closely with you in the selection and application of any Metasap Stearate or Palmitate which will give you the most advantageous results.

APPLICATIONS:

(A) for THICKENING
1. oils for greases
2. paints
3. plastisols
4. waxes
5. printing inks

(B) for LUBRICATING
1. plastics (powders)
2. wire drawing compounds
3. pharmaceuticals (tablets)
4. rubber tubes & sheeting

(C) for STABILIZING
vinyl resins

(D) for imparting WATER REPELLENCY to
1. textiles
2. building materials
3. hygroscopic powders

(E) to retain TRANSPARENCY in
1. greases
2. waterproofing materials
3. lacquers and varnishes

(F) for FLATTING
1. lacquers and varnishes
2. paints

(G) for SUSPENSION of
1. pigments
2. graphite

(H) as BINDERS in
powder metallurgy

SYNTHETIC ORGANIC CHEMICALS

We will supply samples and technical data to stimulate work that may lead to new or expanded uses for these synthetic organic chemicals.

Aspartic Acid (DL) • 2,4'-Benzophenone Dicarboxylic Acid • beta-Benzoyl Acrylic Acid • Diallyl Maleate • 1,2-Dibenzoylethylene (trans) • 1,4-Dihydroxy Naphthalene • 2,3-Dihydroxy Naphthalene-6-Sodium Sulfonate • 1,5-Dihydroxy Naphthalene • Fumaryl Chloride Hexahydro Phthalic Anhydride • Monochloro Maleic Anhydride • Nadic Anhydride [endo-cis-Bicyclo(2,2,1)-5-Heptene-2,3-Dicarboxylic Anhydride] • 1,4-Naphthoquinone Phthalide • Phthalimide • gamma-Pimelo Dilactone • Potassium Acid Acetylene Dicarboxylate • Tetrahydro Phthalic Anhydride (Cis-4-Cyclohexene-1,2-Dicarboxylic Acid Anhydride) • Tetrahydro Phthalimide • Alkenyl Succinic Anhydride • N-Alkyl Succinimides N-Chloro Aryl Succinimides

We also welcome requests for samples and data on these National Organic Chemicals:

S-Alkylthiomalic Acids • Dimethyl Dichlorosuccinate (Antimycotic NPD-4019) • Fumaric Acid Maleic (Toxilic) Acid • Maleic (Toxilic) Anhydride • Malic Acid (Technical & Food Grade) Normal Calcium Malate • Sodium Acid Maleate • Succinic Acid • Succinic Acid Anhydride

as well as for these National Antioxidants:

Acetaldoxime • Butyraldoxime • Methyl Ethyl Ketoxime • National Antioxidant B National Antiskinning Agent

PHARMACEUTICAL CHEMICALS

We list here some of the pharmaceutical chemicals which National Pharmaceutical Laboratories are prepared to make on a contract basis to exacting specifications. We have no major interest in making or marketing finished pharmaceuticals. We do, however, have a very long and substantial background of research on related products incidental to the development of National Aniline Dyes, Stains and Certified Colors. We are particularly interested in developing and supplying intermediates of aromatic and heterocyclic structures, derived from Benzene, Naphthalene, Anthracene, Anthraquinone and Quinoline rings; also derivatives of Maleic and Succinic Acid Anhydrides.

para-Acetamino Benzaldehyde • 1-Acetylamino-6-Hydroxy Naphthalene • Amino Acridine Hydrochloride • 4-Amino Antipyrine • para-Amino Benzoic Acid USP and Technical para-Amino Hippuric Acid • Aminopyrine • N-Bromosuccinimide • Calcium Succinate N-Chlorosuccinimide • 2-Chloro-4-Nitro Benzoic Acid • 1,6-Dihydroxy Naphthalene N,N-Dimethylamino-para-Cresol (1-Methyl-2-Dimethylamino-4-Hydroxy Benzene) • meta-Hydroxy Benzaldehyde • 2-Hydroxy-1,4-Naphthoquinone • Isatin • 3-Nitro-4-Acetylamino Anisole (4-Acetamido-3-Nitro Anisole) • meta-Nitro Benzaldehyde • para-Nitrobenzene Sulfonyl Chloride • Sodium para-Amino Benzoate • Succinic Acid • Succinic Anhydride Succinimide • Thiomalic Acid

NOPCO CHEMICAL COMPANY

SUPPLIER OF CHEMICALS TO INDUSTRY FOR NEARLY 50 YEARS

Nopco Chemical Company, organized in 1907 to produce processing chemicals for industry, has grown until, today, its three plants, nationwide distribution facilities, and direct technical sales representation in 44 States make Nopco products and service available to manufacturers and processors from coast to coast.

At Harrison, N. J., alone, thirteen highly trained laboratory staffs concentrate on product analysis, control, and application problems. Equally competent laboratory staffs are maintained at all branch plants. Long-term research, a dominant factor in Nopco policy, is conducted continuously.

A Technical Service Division stands ready at all times to help manufacturers solve their particular application problems.

Nopco Industrial Chemicals Include:

DISPERSED METALLIC SOAPS
Providing:
Paper Coating Ingredients
Rubber Parting Compounds

SODIUM SOAPS OF VEGETABLE FATS
Providing:
Cement Air-Entraining Agents
Paper Sizing
Paper Coating Ingredients
Wool Fulling and Scouring Oils

SULFATED OILS
Providing:
Acid Fulling Aid
Cutting Oil Bases
Furniture Polish Emulsifiers
Hair Shampoo Bases
Insecticide Emulsifiers
Latex Stabilizers
Leather Fatliquors (all grades)
Mineral Oil Emulsifiers
Paper Coating Ingredients
Pigment Flushing Aids
Pine Oil Emulsifiers
Starch Plasticizers
Textile Dyeing Penetrant
Textile Finishing Aids
Textile Wetting & Rewetting Agents
Viscose Clarifiers

FATTY AMINES
Providing:
Paper Rewetting Agents
Textile Dyeing Assistant
Viscose Processing Aid
Wool Fabric Napping Aid

SOLUBLE PINE OILS
Providing:
Paper Coating Ingredient
Textile Dyeing Penetrant

POLYACRYLIC RESINS
Providing:
Latex Thickeners
Textile Warp Size

SOLUBLE MINERAL OILS
Providing:
Leather Split Oils
Pigment Grinding Aid
Rayon and Nylon Knitting Yarns
Rayon and Nylon Weaving Yarns
Wool Spinning Lubricant

EMULSIFIED ANIMAL FATS
Providing:
Copper Wire Drawing Compounds
Paper Stock Defoamer

SULFONATED ALKYLATED AROMATICS
Providing:
Insecticide Emulsifiers
Metal Pickling Assistants
Paper Pitch Dispersing Agents

EMULSIFIED VEGETABLE OILS
Providing:
Gelatin Plasticizers
Latex Paint Defoamers
Leather Fatliquors
Rayon Crepe Soaking
Rayon Hosiery Yarn Treatments
Silk Soaking Oils
Worsted Fiber Lubricant

EMULSIFIED RESINS
Providing:
Adhesive Ingredients
Latex Extenders

FATTY ESTERS
Providing:
Aluminum Rolling Oil Additive
Copper Rolling Oil Additive
Insecticide Emulsifiers
Linseed Oil Extenders
Penicillin Fermentation Defoamer
Textile Finishing Aids

SULFATED FATTY ESTERS
Providing:
Paper Rewetting Agents
Textile Wetting and Rewetting Agents

EMULSIFIED SOLVENTS
Providing:
Dry Cleaning Aids
Paper Stock Defoamers
Textile Yarn Scouring Aid

FATTY AMIDES
Providing:
Dry Cleaning Assistants
Laundry Washing Aid
Paper Felt Washing Compound
Textile Detergents
Wax Dispersing and Emulsification
Wool Fulling and Scouring Oils

EMULSIFIED PARAFFIN WAX
Providing:
Beet Sugar Defoamers
Paper Sizing
Textile Fabric Finishing Aid

FUNCTION	ONYX PRODUCT	CHEMICAL COMPOSITION	CHARACTERISTICS	SUGGESTED APPLICATIONS
Foaming Agent, Stabilizer	**ONYX-OL 368**	Lauric acid alkanolamine condensate	Non-ionic. Powder, 97% active. Water insoluble. Designed for building and stabilizing foam when used in combination with anionics such as sulfated fatty alcohols.	Powdered detergents and shampoo formulations.
Fungicide	**ISOTHAN Q-15**	Lauryl isoquinolinium bromide	Cationic. Liquid, 20% active in water and isopropyl alcohol. Miscible with water in all proportions. Non-toxic and non-irritating in use dilutions.	Agricultural fungicide. Dandruff control formulations. Preparations for control of athlete's foot.
Germicide	**BTC 50%**	Alkyl (C_8H_{17} to C_{18}-H_{37}) dimethyl benzyl ammonium chloride	Cationic. Colorless to light yellow liquid. 50% active in aqueous solution. Miscible in water, soluble in lower alcohols and many organic solvents. Non-toxic and non-irritating in use dilutions.	General disinfectant and deodorant. Disinfection of farm, dairy and food processing equipment. Sanitization of eating and drinking utensils.
Germicide	**TETROSAN 3,4D**	Alkyl dimethyl 3,4 dichlorbenzyl ammonium chloride	Cationic. Colorless to light yellow liquid. 60% active in aqueous solution. Miscible with water. Soluble in lower alcohols and many organic solvents. High phenol co-efficients. Non-toxic and non-irritating in use dilutions.	Disinfectant, deodorant, preventive antiseptic in the veterinary and livestock fields. Pharmaceutical formulations for topical application.
Thickening Agent	**ONYX-OL 336** *(See above)*			
Wetting Agent	**NEUTRONYX 600** *(See above)*			
Wetting Agent	**MAPROFIX POWDER LK** *(See above)*			

Whatever your needs in surface active agents, ONYX either has or will formulate especially for you, a specialty that will fill that need. The products listed above are but a very few developed by ONYX to meet the greatest demands, and are available in commercial and research quantities.

We will gladly send complete data on these and other surface agents — cationic, anionic and non-ionic — upon request. Our laboratories are also prepared to consult with you on any special problem you may have.

ONYX

OIL & CHEMICAL COMPANY

INDUSTRIAL DIVISION

186 WARREN ST., JERSEY CITY 2, N. J.

CHICAGO • BOSTON • CHARLOTTE • ATLANTA

For Export: ONYX International, Jersey City 2, N. J.

West Coast Representatives: E. C. Brownlow Co., San Francisco, Los Angeles

ONYX SURFACE ACTIVE AGENTS FOR SUPERIOR PRODUCTS

FUNCTION	ONYX PRODUCT	CHEMICAL COMPOSITION	CHARACTERISTICS	SUGGESTED APPLICATIONS
Algaecide	**ONYXIDE**	Alkenyl (C_{16}-C_{20}) dimethyl ethyl ammonium bromide	Cationic. Tan paste. 75% active in isopropyl alcohol or propylene glycol. Soluble in water and lower alcohols. Incompatible with anionics. Non-toxic and non-irritating in use dilutions.	Control of algae and slime in swimming pools, cooling water towers, air conditioning systems, paper mills, etc.
Detergent	**NEUTRONYX 600**	Alkyl phenol polyglycol ether	Non-ionic. 100% active, clear amber liquid. Miscible with water in all proportions. Soluble in alcohol and organic solvents.	Household and industrial cleaning compounds. Metal cleaning and degreasing. Detergent sanitizers in combination with quaternary ammonium compounds. Time dispersant. Dispersing and emulsifying agent for insecticidal and herbicidal sprays. Wetting agent.
Detergent	**ONYX-OL 336** *(See below)*			
Detergent	**MAPROFIX TLS-50**	Triethanolamine lauryl sulphate	Anionic. Liquid, 44% active. Cloud point, 0°C. Good foaming.	Liquid household detergent ingredient. Liquid shampoos. Industrial cleaners.
Detergent	**MAPROFIX POWDER LK**	Sodium lauryl sulphate	Anionic. Powder, 92% active. Good foaming agent. Also available in refined grade and USP quality. Low salt content.	Shampoos, shaving creams, etc. Scouring powder foaming agent. Dentifrice foaming agent. Industrial and household cleaning. Rug and upholstery cleaning. Good wetting properties.
Emulsifying Agent	**NEUTRONYX 834**	Polyethylene glycol (300) oleic acid ester	Non-ionic. Liquid, 100% active. Oil and solvent soluble.	Dry cleaning solutions. Metal cleaning and degreasing. Auxiliary wax emulsifier.
Emulsifying Agent	**NEUTRONYX 600** *(See above)*			
Foaming Agent, Stabilizer	**ONYX-OL 336**	Lauric acid alkanolamine condensate	Non-ionic. Liquid, 97% active. Water soluble. Good foam building and stabilizing in presence of anionics such as alkyl aryl sulphonates.	Shampoo and bubble-bath formulations. Liquid household detergents for washing dishes, walls, etc. Ore flotation. Provides dense foam and adds viscosity to formulations.

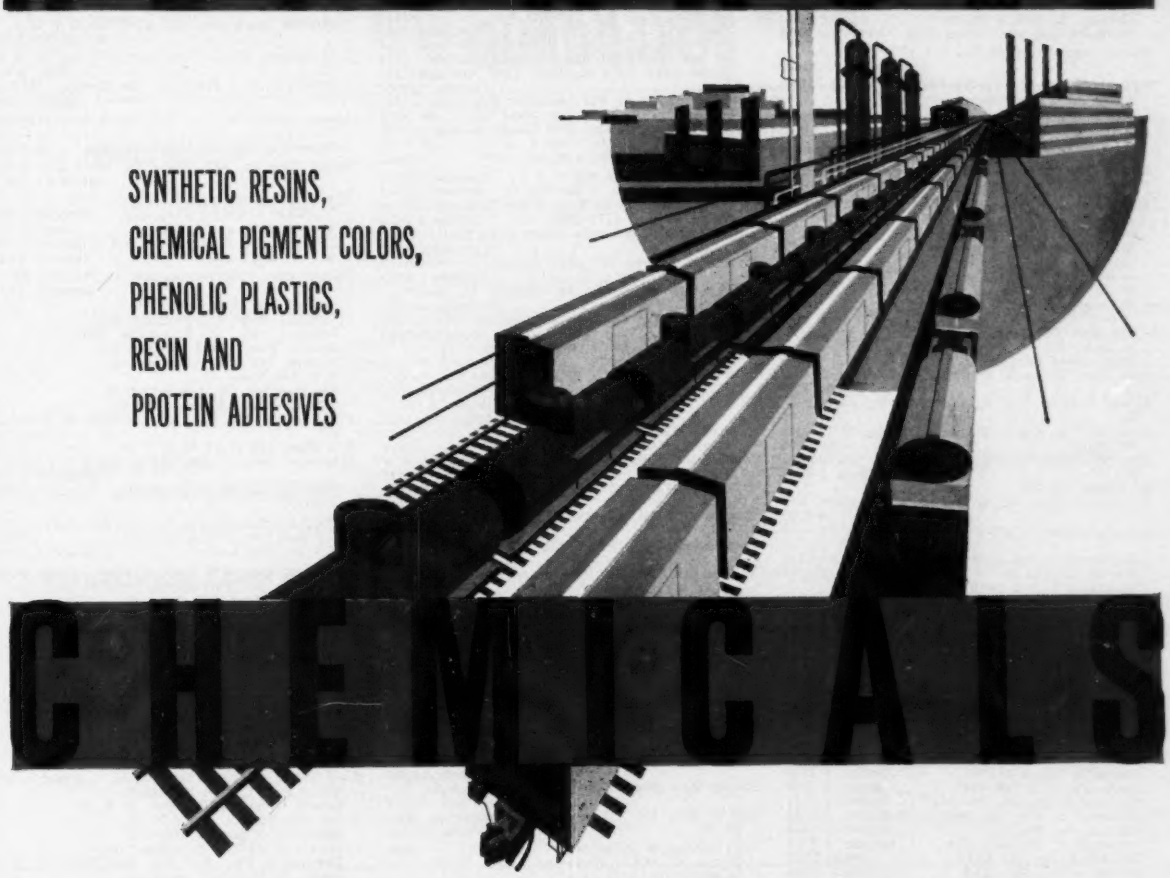
If you make or use products like these ...it will pay you to buy basic!

Can you find any of the products *your* company uses in this flow chart? If you can, chances are you'll do better to buy *basic* . . . from Pittsburgh Coke & Chemical. At our completely integrated Neville Island plant, we control *every* step of production from coal to finished product. The result? Assured uniform quality and dependable continuing supplies.



Whether your interest lies in basic products like coke, pig iron and cement or in coal-derived chemical products like plasticizers, protective coatings and agricultural chemicals, it will pay you, in every way, to call Pittsburgh Coke & Chemical *first!*

PITTSBURGH
COKE & CHEMICAL CO.
Grant Building, Pittsburgh 19, Pa.

WBD 4261

COAL CHEMICALS • AGRICULTURAL CHEMICALS • PROTECTIVE COATINGS • PLASTICIZERS • ACTIVATED CARBON • COKE • CEMENT • PIG IRON

REICHHOLD

SYNTHETIC RESINS,

ALSO
KEEP IN TOUCH
WITH RCI FOR:
PHENOL, GLYCERINE,
MALEIC ANHYDRIDE,
PHTHALIC ANHYDRIDE,
SODIUM SULFATE,
SODIUM SULFITE

• Thanks to Reichhold's policy of self-integration, supplying high quality raw materials to itself, RCI is today a major producer of the basic chemicals listed at the left. In order to assure an adequate supply for its world-wide manufacturing organization, the production capacity of Reichhold chemical plants is necessarily large. Thus, Reichhold is frequently in a position to share its output of these vital chemicals. If you have been looking for an additional source of phenol, glycerine, maleic anhydride, phthalic anhydride, sodium sulfate or sodium sulfite, write, wire or phone the Chemical Department for current availabilities.

RUMFORD CHEMICAL WORKS

Technical Service Dept., 10 Newman Ave., Rumford 16, R. I.

QUADRAFOS *

FUNCTIONS

SEQUESTRATION — QUADRAFOS has the ability to hold a metal ion in a complex so slightly ionized that reactions characteristic of the metal do not occur. By virtue of this mechanism, QUADRAFOS effectively removes objectionable ions from solution but does not precipitate them.

WATER SOFTENING — QUADRAFOS sequesters alkaline earth metals (calcium and magnesium) responsible for hardness of water, thus softening completely without precipitation.

SOLUBILIZATION — QUADRAFOS dissolves precipitates left on equipment and goods after normal use of detergents.

DEFLOCCULATION AND DISPERSION — QUADRAFOS is a powerful dispersing agent for solids in suspension.

EMULSIFICATION — QUADRAFOS is an associate emulsifier.

CORROSION CONTROL — QUADRAFOS is an efficient rust inhibitor.

STABILIZATION — QUADRAFOS used in the amount of 1 or 2 parts per million will stabilize calcium and iron salts in solution, thereby preventing scale formation on pipes and heat exchange surfaces and eliminating red water.

INDUSTRIAL USES

Detergent Compounding
Laundering
Textile
Oil Well Drilling
Paper
  a. Viscosity control in coating
  b. Pitch control
Water Conditioning

FORMS

QUADRAFOS GRANULAR — A dry, white, free-flowing powder suitable for incorporation in detergent compounds of a granular nature.

QUADRAFOS POWDERED — A free-flowing white powder more finely divided than QUADRAFOS GRANULAR and better adapted to powdered detergents.

QUADRAFOS BEADS — Clear Spheroids of $\frac{3}{16}$-inch average diameter, containing no dust or fine material. For use in preparing QUADRAFOS stock solutions.

PACKING

100-Pound Triotex Bag — waterproof laminated textile and paper.
(Granular, Powdered, or Beads in Bulk)

100-Pound Fiberpak Drum
(Granular, Powdered, or Beads in Bulk)

300-Pound Leverpak Drum
(Granular, Powdered, or Beads in Bulk)

60-Pound Fiberpak Drum
(3 Dissolver Bags Beads: 20 pounds each)

100-Pound Baler Bag
(5 Dissolver Bags Beads: 20 pounds each)

300-Pound Leverpak Drum
(15 Dissolver Bags Beads: 20 pounds each)

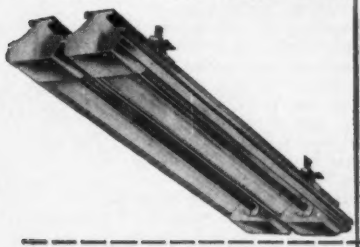
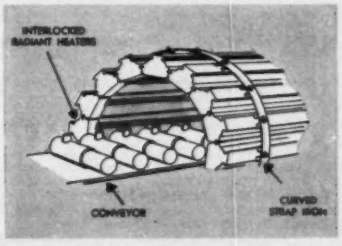
CHROMALOX offers you efficient and economical *Packaged Electric Heat*—to fit your specific needs

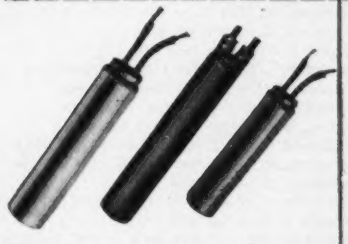


CHROMALOX Electric Heaters give dependable "on-the-spot" heat where and when heat is needed. They produce uniform and accurate temperatures with automatic or manual control. *Low initial cost, low installation cost and low operating costs are among the other advantages they give you.*

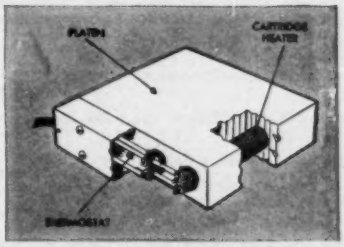
CHROMALOX STRIP HEATERS



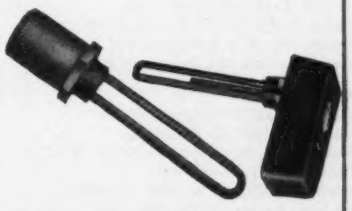
Easy-to-install CHROMALOX Strip Heaters are clamped to flat or curved surfaces, round vats, pipes and tubes. They are made in straight lengths, rings and segments . . . and may be curved or bent to fit cylindrical or "dished" surfaces. Typical applications include: armatures, cleaning tanks, molds, process kettles, plating baths, revolving rolls, etc.



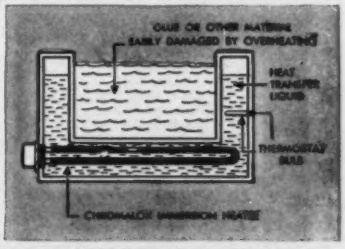
CHROMALOX RADIANT HEATERS



CHROMALOX Radiant Heaters let you dial the precise temperatures needed for baking, drying, curing, dehydrating and similar uses. They give glareless *far*-infrared heat that is absorbed efficiently by all colors, textures and surfaces. All-metal construction withstands shock, vibration, rough handling. Units are compact; easy to install in present equipment or assemble into tunnels, banks, etc.

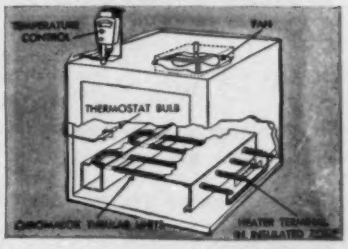


CHROMALOX CARTRIDGE HEATERS



Compact CHROMALOX Cartridge Heaters are ideal for use when concentrated heat is needed. Inserted into close-fitting holes, they provide easily controlled heat for dies, molds, platens, etc. They are quickly and easily installed in stationary or moving parts with minimum labor and material costs; they may be controlled for accurate, dependable, care-free operation.

CHROMALOX IMMERSION HEATERS



CHROMALOX Immersion Heaters are used in degreasing, cleaning, pickling and plating baths; for melting greases, asphalts and similar viscous fluids; for heating Dowtherm, Arochlor, Prestone, and other heat-transfer mediums. Available in many sizes and types, with alloy sheaths to resist corrosive action.

CHROMALOX TUBULAR HEATERS

These heaters, in straight or tailored shapes are used for convection, conduction and radiant heating. They may be clamped to metal surfaces, used in ovens, or immersed in greases. They are especially useful to heat ovens, calenders, molding-presses and similar equipment utilizing heat.

CHROMALOX NATION-WIDE ENGINEERING SERVICE AVAILABLE

Technical know-how for solving thousands of heating problems is available to you without obligation. Chromalox Application Engineers, located in principal cities, will work with you in adapting electric heat to your product or process. Write for name of Chromalox Engineer nearest you.

EDWIN L. WIEGAND COMPANY

7648 Thomas Boulevard • Pittsburgh 8, Pa.

Designers and Manufacturers of Electric Heating Units Exclusively Since 1917

U. S. INDUSTRIAL CHEMICALS CO.

Division of National Distillers Products Corporation

120 Broadway, New York 5, N. Y.

You can rely on U.S.I. for products of uniformly high quality — alcohols . . . chemicals . . . solvents . . . intermediates . . . resins . . . insecticide ingredients . . . and feed supplements. The raw materials that go into U.S.I. products are selected with the utmost care, and U.S.I.'s modern research and production facilities are equipped with all the special control devices needed to insure quality that doesn't vary.

Complete technical information on any of the U.S.I. products described here is available in the form of booklets and data sheets and in U.S.I.'s three catalogs—"Chemicals," "Resins," and "Alcohols." Write for your copy.

PRODUCT AND CHEMICAL FORMULA	Distillation Range Limits in deg. C.	Flash Point (open cup) in deg. F.	Evaporation Rate Minutes	Acidity: Free acid, not more than—	Specific Gravity 20°/20°C.	APPLICATIONS	CONTAINERS
ALCOHOLS							
Amyl Alcohol (Isoamyl Alcohol) Refined and A.C.S. $C_5H_{11}OH$	128–32	127	....	.91% as acetic	0.811–0.815	A medium-boiling solvent, used mainly in manufacture of fine chemicals and pharmaceuticals.	8,000-gal. tank cars, 30,000-lb. drum cars. 3x2,000-gal. compartment tank cars, 55- and 5-gal. drums, 1-gal. cans.
Butanol (Normal Butyl Alcohol) (C_4H_9OH	115–118	115	67	.005% as acetic	0.810–0.813	A strong solvent for many organic materials. Slow evaporation rate makes it particularly important as latent solvent for nitrocellulose and resins. Chemical synthesis.	Same as amyl alcohol
Fusel Oil Refined	110–135	123	103.5	.01% as acetic	0.811–0.815	A solvent for many resins. Widely used in solvent combinations to retard drying and prevent blushing. Source of isoamyl alcohol for synthesis.	Same as amyl alcohol plus quart cans and pint cans.
Ethanol (Ethyl Alcohol) C_2H_5OH	Ethyl Alcohol—U.S.P.—190 Proof and Absolute 200 Proof All regular and anhydrous formulas of specially and completely denatured alcohol						
***Solox** (Proprietary alcohol-type solvent: Regular, 190 proof. Anhydrous, 200 proof)	....	71	....	.02 gm. per 100 cc. as acetic	0.816† (Reg.) 0.796† (Anhy.)	Shellac solvent and general solvent, fuel oil conditioner, cleanser, cleaning compounds, lacquers, paint removers, polishes, etc. In spirit varnishes and in purification, extraction and crystallization processes.	Same as amyl alcohol
Propyl Alcohol	2°C. incl. 97.2°C.	85	....	0.1% as acetic	.804–.809	A strong solvent for many organic materials. Latent solvent for nitrocellulose and resins. Chemical synthesis.	Same as amyl alcohol
SOLVENTS							
***Ansol M** (Blend of Ethanol, esters and hydrocarbons)	70–90	52	14.5	.01% as acetic	0.796–0.800	Anhydrous solvent for many resins not soluble in ethanol alone, solvent for SS nitrocellulose. Used as lacquer solvent and thinner in dopes, plastic cements, celluloid, cleaners, paper, lacquer, thinners, linoleum, varnish, etc.	Same as amyl alcohol except 36,000-lb. drum cars.
***Ansol PR** (Blend of anhydrous denatured ethanol, esters, and hydrocarbons)	70–90	54	9	.01% as acetic	0.841–0.845	Anhydrous solvent comparing favorably with ethyl acetate in solvent power, evaporation rate, boiling point and odor. Used as lacquer solvent and thinner in dopes, celluloid, paper, cleaners, decalcomanias, linoleum, cement, paint removers, varnishes.	Same as amyl alcohol except 36,000-lb. drum cars.
Amyl Acetate Commercial and High Test $CH_3COOC_5H_{11}$ 85–88%	110–150	93	47.5	.01% as acetic	0.857–0.865	Medium evaporation solvent somewhat slower than butyl acetate. Used as moisture and cotton anti-blush agent for nitrocellulose lacquers. Also in flavoring extracts, and in the isolation and purification of penicillin.	Same as amyl alcohol
Butyl Acetate Normal $CH_3COOC_4H_9$	115–135	100	34.75	.01% as acetic	0.874–0.878	Most widely used medium-evaporating nitrocellulose solvent. Used in airplane dopes, artificial pearl, celluloid, cements, coated paper, lacquers, plastic wood, thinners, leather finishes, linoleum, textile sizing, etc.	Same as amyl alcohol
Ethyl Acetate $CH_3COOC_2H_5$ Commercial, 85–88% (95–98% and 99% also available)	70–80	42	11.25	.01% as acetic	0.882–0.886	Excellent solvent for cellulose esters, resins, etc. Also used in acetic acid extraction, candy glaze, cleaners, den. alcohols, flavorings, perfumes, rayon, pharmaceuticals, smokeless powder, paint removers, spirit varnishes, etc.	Same as amyl alcohol
Ethyl Ether, U.S.P. $(C_2H_5)_2O$ (Also absolute A.C.S. Grade)	.....	Below 0°	....	=0.4 cc. 0.02N NaOH per 100 cc.	.713–.716	Widely used in manufacture of smokeless powder and in extracting fats. An essential laboratory reagent. Chemical synthesis.	48,000-lb. tank cars, 30,000-lb. drum cars, 55- and 5-gal. steel drums.

* Registered Trade Mark.
† 60°/60°F.

U. S. INDUSTRIAL CHEMICALS CO.

Division of National Distillers Products Corporation

PRODUCT AND CHEMICAL FORMULA	Distillation Range Limits in deg. C.	Flash Point (open cup) in deg. F.	Evaporation Rate Minutes	Acidity: Free acid, not more than—	Specific Gravity 20°/20°C.	APPLICATIONS	CONTAINERS
Solvents (Cont'd)							
Acetone $(CH_3)_2CO$	55.6–57.1	14	5.5	.002% as carbon dioxide	0.791–0.799	A solvent for cellulose acetate and the whole range of nitrocellulose lacquers. Used as a raw material in pharmaceuticals, dyes, and plastics; and as a de-waxing agent for lubricating oils. Chemical synthesis.	Same as amyl alcohol
Propyl Acetate Normal $CH_3COOC_3H_7$	95–105	64	....	0.1% as acetic	0.879–0.883	Excellent solvent for nitrocellulose and resins and oils used in lacquer formulations. Used in manufacture of lacquers, artificial leather, dopes, films, and plastics. Also in organic syntheses.	Same as amyl alcohol
Diethyl Oxalate $(COOC_2H_5)_2$	180–190	168	....	.05% as oxalic	1.075–1.079	Used in radio tube cathode coating, to prevent rapid drying of nitrocellulose printing inks, etc. Also in organic syntheses.	Same as amyl alcohol except 36,000-lb. drum cars.
Diatol* (Ethyl Carbonate 90%)	100–130	82	35	.02% as carbonic	.954–.957	A nearly-neutral, mild-odor, medium-evaporating nitrocellulose solvent, used in lacquers, radio tubes, etc.	Same as amyl alcohol except 36,000-lb. drum cars.
Diethyl Carbonate $(C_2H_5)_2CO_3$	120–130	115	34.75	.02% as carbonic	.973–.977	Similar to Diatol*, also in synthesizing phenobarbital and other organics.	Same as amyl alcohol except 36,000-lb. drum cars.
PLASTICIZERS							
Diamyl Phthalate $C_6H_4(COOC_5H_{11})_2$	247–255	357	....	.01% as phthalic	1.022–1.026	Plasticizer and solvent for nitrocellulose	Same as amyl alcohol except 36,000-lb. drum cars.
Dibutyl Phthalate $C_6H_4(COOC_4H_{11})_2$	236–244	352	....	.01% as phthalic	1.047–1.051	One of the most widely used plasticizers for cellulose derivatives, resins and plastics. Combines excellent plasticizing properties with good color retention and low temperature flexibility.	Same as amyl alcohol
Diethyl Phthalate $C_6H_4(COOC_2H_5)_2$	200–207	325	....	.01% as phthalic	1.117–1.121	Used as a plasticizer for cellulose acetate and nitrocellulose, in extreme pressure lubricants, and as a fixative in perfumes and essential oils.	Same as amyl alcohol
Ethylene C_2H_4 Refined and Commercial Grades	Used as a hydrocarbon fuel for cutting, welding and brazing, as a ripening agent for fruits and vegetables, as a general anesthetic and in many organic syntheses.						Shipped in 25-lb. net steel cylinders, under 1400–1700 lbs. per sq. in. pressure.

U. S. I. INTERMEDIATES

PRODUCT	FORMULA	COLOR	MELTING POINT (Deg. C.)	PURITY	APPLICATIONS	CONTAINERS
Acetoacetanilide	$CH_3COCH_2CONHC_6H_5$	White	82.5	97%	Manufacture of yellow dyes such as Hansa and benzidine yellows.	200
Acetoacet-ortho-chloranilide	$CH_3COCH_2CONHC_6H_4Cl$	White	102.5	97%		250
Acetoacet-para-chloranilide	$CH_3COCH_2CONHC_6H_4Cl$	White	130–132	97%		250
Acetoacet-ortho-toluidide	$CH_3COCH_2CONHC_6H_4CH_3$	White	104–105	96%		250
Acetoacet-ortho-anisidide	$CH_3COCH_2CONHC_6H_4OCH_3$	White	82–85	97%		250
Ethyl Acetoacetate	$CH_3COCH_2COOC_2H_5$	Nearly water white		96.5%		
Ethyl Benzoylacetate	$C_6H_5COCH_2COOC_2H_5$	Light yellow	Dist. Range 144–148 at 10 mm. pressure	95%	Manufacture of dyes and pharmaceuticals, organic syntheses.	55- and 5-gal. drums 1-gal. bottles.
Ethyl Sodium Oxalacetate	$C_2H_5OOCC(ONa):CHCOOC_2H_5$	Light yellow	....	92%	As a highly reactive intermediate in production of ore-refining flotation agents and other organic syntheses.	Fibre drums, net weight 175 lbs.
Ethyl Chloroformate	$ClCOOC_2H_5$	Water white	....	95%		5-gal. and 3-gal. carboys.

METALLIC SODIUM

Available for immediate shipment from National Distillers Chemical Co., Ashtabula, Ohio. Sold by **U.S.I.** Both are Divisions of National Distillers Products Corporation.

Price quotations can be secured from **U.S.I.** at 120 Broadway or from any branch sales office.

Technical Service is available upon request on all aspects of sodium chemistry and handling procedures.

Na Na Na Na Na

FOR INDUSTRY

Bricks— 12, 5, 2½ and 1 lb. (55-gallon returnable steel barrels).

Solid— 400 lb. net (55-gallon non-returnable steel drums).

Tank cars—80,000 lbs.

FOR RESEARCH AND DEVELOPMENT

1 or 2 lb. bricks (3½ gallon steel pails, 20 lbs. net).

Na Na Na Na Na

LITERATURE

Handling Metallic Sodium is a comprehensive handbook covering equipment and handling procedures.

Sodium Dispersions consist of microscopic sodium particles (1-20 microns) suspended in inert hydrocarbons. Booklet covers properties, applications; tells how to prepare and handle sodium in this form on laboratory and plant scale.

High Surface Sodium on Inert Solids may be visualized as extremely thin sodium films on finely divided solid carriers. Such sodium coated solids can carry over 30% Na; yet the films are calculated to be only 5 atoms thick. Discusses uses for this extremely reactive, free-flowing form of sodium, explains preparation, handling for laboratory and plant operations.

*Registered Trade Mark.

U. S. INDUSTRIAL CHEMICALS CO.

Division of National Distillers Products Corporation

U. S. I. RESINS—NATURAL AND SYNTHETIC

The specifications shown below have been prepared to assist users in selecting resins for particular applications. However, the list is far from complete and only shows a few representative types. For complete list and specifications, refer to U.S.I. "Resinews," Vol. XV. U.S.I. maintains a large technical staff devoted to development and testing of resins and its services are always available to customers for cooperation on technical problems.

At this writing, there is a scarcity of many important raw materials used in the production of synthetic resins. Therefore, it may not always be possible under existing circumstances to supply all of our resins. Details pertaining to the availability of any one of them at a given time, including the natural resins as well, will be furnished upon request.

U. S. I. NATURAL RESINS

U.S.I. stocks a complete line of natural resins of the types utilized by the protective coating, ink, adhesive and allied industries. These include various grades of Damars, Manila, Congo, Kauri, East Indias, Elemi, Accroides, Sandarac, Pontianak. For grades and standard packaging chart see U.S.I. "Resinews," Vol. XV, Pages 137-146 inclusive.

Resin	Acid	Melting Point °C.	Color (Gardner Stds. '33) 50% cut in M.S.	Specific Gravity at 25°C.	Solubility†	Characteristics and General Uses
U. S. I. ESTER GUMS						
B	5–9	95–105	7–10	1.07–1.12	S	For exceptional hardness with minimum sacrifice in color of resulting varnish or lacquer.
C	4–8	85–95	8 or less	1.07–1.12	S	For extreme paleness, particularly in lacquer and cold cuts.
F	3 Max.	80–90	6–10	1.07–1.12	S	EG "F": Low acid Ester for non-blushing lacquer.
G	10–12	65–75	7–10	1.07–1.12	S	A softer Ester, ethyl alcohol tolerant, particularly designed for adhesives.
H	4–8	70–80	6–9	1.07–1.12	S	Ester Gum H is substantially a non-oxidizing Ester Gum. It is used for adhesives, paper coatings, etc., where freedom from after-brittling is essential. Extensively used in chewing gum manufacture.
PROCESSED CONGO GUMS						
FUSED 5	60–80	110–130	12–17*	1.05–1.10	PS	Unmodified fine melt variety. Gives excellent bodying and fast through-drying with most oils; characteristic hard, tough films.
Congo Ester 15	5–10	105–110	9–13	1.07–1.12	S	For tough, hard and glossy varnish and lacquer films, readily polishable.
AROFENE® PURE (100%) PHENOLICS						
700	45–55**	85–100**	4 or less***	1.05–1.10	S	A heat-hardening, heat-reactive resin giving a hard, durable finish with pale initial color and minimum phenolic after yellowing. It assures gasproofing of Tung Oil varnishes and may be used in all types of varnishes or fused with Ester Gum to make modified phenolics.
753	80–100	140–155	10 Max.***	1.03–1.08	PS	Fast bodying with Tung Oil producing fast drying spar varnishes ideal for floor and trim shelf goods.
775	.....	121–138	10 or less****	1.03–1.08	I	Non-heat reactive resin meeting Navy Spec. 52R11. Outstanding chemically resistant spar varnishes are obtained by combining this resin with Tung or Linseed or combinations of these oils.

†S Soluble in petroleum and coal-tar hydrocarbons, lacquer solvents and the usual varnish oils. Insoluble in ethyl alcohol.
PS Soluble in coal-tar hydrocarbons, lacquer solvents and the usual varnish oils. Insoluble to partially soluble in petroleum hydrocarbons. Insoluble in ethyl alcohol.
I Insoluble in petroleum and coal-tar hydrocarbons; also ethyl alcohol. Soluble in usual varnish oils.
* Resin: 5 Toluol.
** Since this resin is heat reactive, the said number and melting point are relatively unimportant because they change with the formation of a new chemical compound of which the oil is part.
*** 50% Solution in Toluol.
**** 50% Solution in Acetone.

AROPLAZ® USE CHART

U.S.I. produces a broad range of alkyd resins—under the trade name AROPLAZ—for use in all the various types of protective and decorative coatings. These resins, with their properties and a partial list of suggested uses, are listed individually on the following pages.

If you are interested in making a particular type of coating, the table on this page will help you find the U.S.I. alkyds most suitable for the job.

AROPLAZ	663	905-T	906-X	930	933-T	945-X	956-S	1031-M	1081-M	1082-M	1084-M	1085-M	1086-M	1100-X	1106-M	1110-X	1120-M	1125-M	1130-X	1133-X	1136-X	1240-M	1241-M	1244-M	1248-M	1249-M	1271	1273	1278	1298-M	1306-M	1320-M	1323-M	1351	1365-X	1379-M	1385-V	1390-X	1395-M

U.S.I.

AROPLAZ® ALKYDS

Resin (Aroplaz)	Solution	Visc. (G.H.)	Acid Value Plastics	Color (Gardner Stds. 1933)	Approx. Wt./gal. @ 25°C.	Characteristics and General Uses
663	50% in Xylol	X–Z	26–32	11 max.	8.3	Modified oxidizing, short oil length—fast dry non-lifting to lacquer. Used in auto primers, surfacers and refinish enamels. JAN E-74 and MIL E-15090A TYPE II.
905–T	50% in Toluol	Q–S	6–12	6 max.	8.3	Short, pure, non-oxidizing alkyd for use in color retentive cold-check resistant lacquers. Its lacquers can be rubbed.
906–X	50% in Xylol with trace Butanol	P–U	4–8	5 max.	8.3	Short, pure, non-oxidizing alkyd. For use in color retentive urea or melamine baking finishes such as refrigerator, washing machine, stove enamels, etc. Also excellent for pale metal lacquers and automotive lacquer enamels.
930	Solvent Free	$Y–Z_2$	4–8	10 max.	8.5	Pure, non-oxidizing resin-plasticizer for nitrocellulose and other film-forming materials. Imparts permanent flexibility and resistance to cold-checking.
945–X	65% in Xylol	W–Y	4–7	9 max.	8.5	Pure semioxidizing—lowest viscosity with nitrocellulose, hence best for high solids and hot-spray lacquers. Non-lifting. JAN L-73.
956–S	49–51% solids in Petroleum Aromatic (Med.)	$Z–Z_2$	5–9	5–8	8.1	Pure, oxidizing, short oil length alkyd resin, especially well suited for use in fast air-drying or low temperature baking finishes in which speed of dry, durability, hardness and toughness are the primary requirements. Very high gloss enamels can be produced with AROPLAZ 956 and high gloss is retained on long aging under all normal conditions. Automotive primers and surfacers and enamels (general), gasoline pump enamels, truck enamels, aluminum paints, machinery, hardware and implement enamels.
1031–M	50% in Mineral Spirits	$Y–Z_1$	8–12	11 max.	7.6	Short, phenol modified, oxidizing alkyd for fast through drying. Recommended for automotive primers and surfacers, hardware marine finishes, etc. In toluol, also excellent for durable lacquers.
1081–M	50% in M.S.	$Z_4–Z_6$	6–10	8 max.	7.7	Medium, pure, oxidizing—compatible with most amine resins. Recommended for low vehicle solids enamels—air dry and baking, industrial or shelf goods.
1082–M	50% in M.S.	W–Y	6–10	9 max.	7.7	Medium, pure, oxidizing—color retentive, easy brushing for architectural and utility shelf goods.
1084–M	50% in M.S.	X–Z	4–8	8 max.	7.7	Medium, pure, oxidizing—similar to A1085 except it is higher in viscosity.
1085–M	50% in Mineral Spirits	T–V	4–7	9 max.	7.6	Medium, pure, oxidizing alkyd of outstanding color and color retention. Suitable for roller coat, brush, spray or dip type finishes, air-drying or low baking. Automotive refinishing, architectural whites, machinery and metal finishing enamels.
1086–M	49–51% in Mineral Spirits	U–X	8–13	9 max.	7.5	Pure, oxidizing, medium to long oil length alkyd, pure whites or colors, interior or exterior, air-dried or baked. Architectural, gasoline pump, hardware, roller-coating enamels, machinery finishes, automotive refinishing, freight car finishes. Faster drying than A1085.
1100–X	50% in Xylol	V–W	22–32	12 max.	8.3	Short, modified oxidizing alkyd. Especially suitable for fast "set," quick air-dry or bake, hard, durable films. Automotive primers, surfacers, enamels and lacquers; also metal cabinet, furniture and similar enamels.
1106–M	70% in M.S.	X–Z	6–10	9 max.	8.1	Medium to long oil, pure, oxidizing. Metal protective, trim and trellis enamels—tints and colors.
1110–X	60% in Xylol	$Y–Z_1$	6–10	8 max.	8.3	Pure, non-oxidizing, medium oil length—High heat baking whites. Clear and pigmented lacquers.
1120–M	60% in M.S.	$Z–Z_2$	4–8	9 max.	7.9	Pure medium oxidizing, color retentive suitable for architectural enamels and shelf goods.
1125–M	50% in Mineral Spirits	S–T	22–28	12 max.	7.5	Medium to short, non-phthalic, modified, oxidizing alkyd type resin. Economical hard resin with fair durability, color retention, air-drying and baking properties. Recommended for hardware, implements, metal cabinet, toy and similar finishes.
1133–X	60% in Xylol	$Z_2–Z_3$	6–10	8 max.	8.5	Short, pure, oxidizing alkyd. Sets fast, air dries or bakes to hard, scuff-resistant, durable and color retentive film. Compatible with ureas and lacquers. Spray type automotive primers and enamels, gas pump, truck and machinery finishes; dipping enamels for hardware.
1136–X	50% in Xylol Trace Butanol	$Z–Z_2$	6–10	8 max.	8.3	Pure oxidizing, short oil, color retentive. Fast curing with amine resins. Provides good adhesion toughness. Recommended baking appliance and roller coat, white enamels.
1240–M	70% in Mineral Spirits	$Y–Z_1$	6–10	8 max.	8.0	Long, pure, oxidizing alkyd meeting Navy Spec. 52R13. Ideal for white and colored-brushing enamels of excellent color and gloss retention and outstanding durability.
1241–M	70% in Mineral Spirits	$Y–Z_1$	6–10	9 max.	8.0	Long, pure, oxidizing alkyd of outstanding properties for use in interior or exterior architectural type brushing enamels. Color and gloss retentive properties superior to most alkyds; its drying is more rapid than other alkyds of equivalent oil length.
1244–M	70% in M.S.	X–Z	5–10	12 max.	8.0	Long, pure, oxidizing—meets maritime resin Spec. 52-MC-501. Recommended metal protective primers, paints, trim and trellis, colored enamels.

AROPLAZ® ALKYDS—(Cont'd)

Resin (Aroplaz)	Solution	Visc. (G.H.)	Acid Value Plastics	Color (Gardner Stds. 1933)	Approx. Wt./gal. @ 25°C.	Characteristics and General Uses
1248-M	69–71% in Mineral Spirits	$Z–Z_2$	8–12	9 max.	8.1	Pure, long-oil alkyd especially developed for use in premium grade white architectural enamels; has excellent gloss and color retention, and shows a complete freedom from hazing in the presence of Zinc Oxide.
1249-M	65%	W–Y	8–12	9 max.	....	Pure, oxidizing, medium long oil. Color and gloss retentive—non-hazing with ZnO. Similar to A1248 except for faster drying.
1271	100%	W–Y	6–10	10 max.	8.4	Pure, very long oil, phthalic alkyds for printing inks to be used
1273	100%	Z-2-Z-3	6–10	10 max.	8.6	alone or in combinations, as desired; give good wetting, easy pigment dispersion, and stability. Their inks lithograph well, dry rapidly to hard glossy films, thus offering advantages over linseed litho varnishes, and many oil-resin vehicles.
1274	100%	$Z_2½$-Z_4	5–10	11 max.	8.3	Long, pure, color retentive alkyd for modifying latex paint.
1278	100%	Z-8-Z-8½	7–10	10 max.	8.8	Same as 1271 and 1273.
1298-M	75%	$Z–Z_1$	10–15	10 max.	7.9	Non-phthalic, modified long oil length. Ready mixed aluminum paints, shelf goods under coaters and enamels.
1306-M	75% in Mineral Spirits	$Z–Z_1$	9–12	9 max.	7.8	Phthalic free resin of modified, medium-to-long, oxidizing type. Economical resin of good durability, color and gloss retention, and satisfactory over-night drying. General purpose enamel vehicle.
1313-M	70% in M.S.	$Z_1–Z_2$	4–8	11 max.	7.85	This resin may be used as replacement for long oil alkyds in architectural enamels: moderately good color retention in whites.
1320-M	50% in Mineral Spirits	W–Y	5–10	9 max.	7.7	Medium, pure, oxidizing alkyd. Same as AROPLAZ 1085M except faster in drying properties and slightly poorer in color retention. Used extensively in Army specification gloss and semi-gloss enamels.
1323-M	50% in Mineral Spirits	$Z–Z_2$	5–10	10 max.	7.6	Medium, pure, oxidizing alkyd. Same properties as AROPLAZ 1320M except higher in viscosity. Especially designed for use in specification primers and lustreless enamels such as Army 3–171, 3–172 and 3–173.
1351	100%	W–Y	10–15	9 max.	8.7	Pure, non-oxidizing long oil. Plasticizer for nitrocellulose lacquer—particularly paper and textile coating types—very economical.
1365-X	60% in Xylol	$Z–Z_2$	18–25	9 max.	8.4	Medium-to-short, pure alkyd. Produced essentially for use in aeronautical primer MIL P6889A but also well suited to use in fast air-drying or baking industrial gloss finishes. Can be used alone or with urea or melamine resins. Not recommended for use in whites.
1366-X	60% in Xylol	$Z–Z_2$	18–25	9 max.	8.5	An alkyd to be used as the sole vehicle in MIL-P-6889A Type I.
1379-M	49–51% in Mineral Spirits	X–Z	8–12	14 max.	7.7	Short, hard resin modified phthalic alkyd—very economical vehicle for use in industrial finishes; also adaptable for use in some architectural finishes and shelf goods.
1385-V	49–51% in VM & P Naphtha	$Z–Z_2$	6–10	12 max.	7.5	Highly modified, short oil alkyd for use in exceptionally fast setting, fast air-drying or baking industrial primers and topcoats, where these properties are of prime importance and exterior durability, color retention etc., are secondary.
1386-V	49–51% in VM & P Naphtha	$Z_2–Z_3½$	6–10	15 max.	7.5	Similar to 1385-V, but more economical.
1389-M	75% in M.S.	$Y–Z_1$	10–15	10 max.	7.9	A non-phthalic, non-castor, long oil, oxidizing, color retentive resin recommended for ready-mixed aluminum paints.
1390-X	49–51% in Xylol	W–Y	10–20	13 max.	8.06–8.23	Phenolic modified short oil—specifically for Navy 52R14, also excellent air dry auto primer and surfacer, auto refinish enamels.
1395-M	70% in M.S.	$Y–Z_1$	8–12	11 max.	7.7	Phenolic modified long oil. Recommended as sole vehicle in porch and deck enamels—also good for utility enamels and varnish.
1397-M	50% in M.S.	N–R	10–20	10 max.	7.5	A non-phthalic, non-castor, medium to short modified oxidizing alkyd, recommended for fast, air-drying, utility enamels, and for baking or air-drying industrial finishes.

AROCHEM®

Resin (Arochem)	Acid No.	Melting Point °C.	Color (Gardner Stds. '33) 50% in Toluol	Specific Gravity @ 25°C.	Aliphatic Solubility	Characteristics and General Uses
90	10–15	130–140	11 max.	1.07–1.12	S	Designed particularly for architectural 4-hour varnishes and utility enamels, with good color, package stability, drying, gas-proofing and ease of handling.
333	35–45	165–175	12	1.07–1.12	PS	Designed for use in pale, fast drying dehydrated castor and linseed varnishes, employing unbodied oils in cook. Bodies oils so rapidly that only normal, short cooking schedules are required.
335	12–18	148–158	12	1.09–1.14	PS	Especially designed for use with linseed and dehydrated castor oil. Bodies all oils rapidly and dries to hard, tough film overnight. Varnishes pale, color retentive and resistant.
337	30–40	150–160	11	1.09–1.14	PS	Same as 335 except somewhat faster bodying; its varnishes are slightly faster drying and more resistant.
345	5–10	110–115	10	1.07–1.12	S	Specially polymerized rosin ester gum for uses in varnishes, adhesives, "cold cuts," etc. Uses: Interior varnishes, adhesives, machinery finishes, hardware finishes, emulsion paints, aluminum liquids, low-cost house paints.
351	15–20	105–115	10	1.07–1.12	S	Fortified ester gum for use in varnishes, cold cuts, etc. Uses: Interior flats and enamels, emulsion paints, primers and undercoats, interior varnishes, toy enamels, aluminum liquids.

AROCHEM®—(Cont'd)

Resin (Arochem)	Acid No.	Melting Point °C.	Color (Gardner Stds. '33) 50% in Toluol	Specific Gravity @ 25°C.	Aliphatic Solubility	Characteristics and General Uses
365	12–18	145–155	12	1.09–1.14	PS	Similar physical properties to 335 except not as color retentive.
372	15–25	150–160	12 max.	1.11–1.16	PS	Modified phenolic for fast bodying with soft oils. Minimum non-yellowing comparable to the Bis-Phenol types with only slight sacrifice in chemical resistance.
404	280–300	145–155	12 max.	1.13–1.18	I	Glycol solutions used for steam set inks.
520	25–35	140–145	10	1.13–1.18	PS	For extremely pale lacquer films with unusually rapid solvent release; very light-colored soft oil vehicles for extremely white air-drying and baking finishes.
545	25–35	145–150	10½	1.13–1.18	PS	Similar to A520 with paler color.
547	25–35	138–148	10 max.	1.13–1.18	PS	Modified condensate for use in lacquer sealers and furniture finishes where maleic types are commonly used. Solvent compatibility and color retention properties are comparable to most maleics.
595	30–40	145–155	10	1.1	PS	Modified phenolic maleic resin; provides solutions and varnishes which possess high viscosity and low penetration and which dry rapidly and hard, of special value in gloss and overprint ink formulations. Uses: Soft oil varnishes (general), tin decorating enamel vehicles.
600	25–30	130–140	12	1.09–1.14	S	Specially modified synthetic for use with the "softer" oils. Suggested Uses: Floor and deck varnishes and enamels, soft oil varnishes—interior and spar, vehicles for tin decorating coatings, architectural enamel vehicles.
605	20–30	155–165	12½	1.1	S	Specially modified synthetic for use with the softer oils. Suggested Uses: Porch and deck paints, quick-drying varnishes and enamels, and spar varnishes. Non-phenolic in character, will not exhibit typical phenolic after-yellowing; suitable for whites.
609	15–25	155–165	11 max.	1.13–1.18	PS	High melting point, modified condensate for use with soft oils to produce color retentive varnishes suitable for white enamels and "Tin-Deco" finishes; suitable replacement for maleics in varnishes.

AROFLAT® SPECIAL ALKYDS

Resin (Aroflat)	Solids	Visc. (G.H.)	Acid Value Plastics	Color (Gardner Stds. 1933)	Approx. Wt./gal. @ 25°C.	Characteristics and General Uses
3010–M	65% in M.S.	V–Y	4–8	11 max.	7.8	Pure alkyd, oxidizing, color retentive. Wall primers and sealers. Semi-penetrating, semi-gloss and flat wall paints of high resistant qualities. For whites and colors.
3025–P	40% in slow Pet. thinner	J–P	5–10	8 max.	7.3	Pure alkyd, oxidizing, color retentive and non-penetrating. Specifically for high quality self-priming flat wall paints, with maximum "non-pen." Also available in odorless type M.S.
3050–M	40% in M.S.	P–W	5–10	10 max.	7.2–7.3	A non-phthalic, non-castor, modified alkyd resin for producing non-penetrating, self-priming, flat wall finishes. (Also in odorless M.S.)

AROFLINT® AIR-CURING PHENOLIC

Resin (Aroflint)	Solids	Visc.	Acid Value Plastics	Color (Gardner Stds. 1933)	Approx. Wt./gal. @ 25°C.	Characteristics and General Uses
131	39–42% in Mixed Alcohols	0.22–0.50 poises @ 25°C.	....	3–7	8.2–8.5	Pure phenolic resin solution that cures with speed of lacquer by chemical action after addition of catalyst. Film is true plastic. Recommended for wood finishes with durability and resistance far superior to conventional finishes.

AROPOL® COPOLYMERS

Resin (Aropol)	Solids	Visc. (G.H.)	Acid Value Plastics	Color (Gardner Stds. 1933)	Approx. Wt./gal. @ 25°C.	Characteristics and General Uses
865	50% in	Z_3–Z_5	3–8	8 max.	7.8	Oxidizing, medium short, copolymer alkyd—fast air dry and bake
866	Pet. Spts.	Z_3–Z_5	3–8	8 max.	7.8	industrial enamels. MIL E10687 (ORD).
880	60% in	Z–Z_2	3–8	8 max.	8.3	Oxidizing short copolymer alkyd—extremely fast air dry and bake
881	Xylol	Z–Z_2	3–8	8 max.	8.3	industrial enamels. MIL E10687 (ORD).

U. S. INDUSTRIAL CHEMICALS CO.

INSECTICIDE AND INSECTIFUGE MATERIALS

* PYRENONE

Non-toxic, effective insecticide concentrates for use in—

- Dairy Cattle and Barn Sprays
- Food Warehouse and Food Processing Plant Sprays
- Household Sprays and Powders
- Livestock Oil Sprays and Wettable Powders
- Low-Pressure and High-Pressure Aerosols
- Electric Vaporizer and Steam Generator Sprays
- Agricultural and Horticultural Sprays and Dusts

PYRENONE Concentrates are available for Oil-Type Sprays, Wettable Powders, Water Emulsions, Powders and Dusts.

"Quick Facts about Pyrenones," a handy reference guide filled with condensed products and end-use data for formulations of all types of insecticides, is yours for the asking. Write for your free copy of this valuable Pyrenone fact folder.

Synthetic and Styrenated Drying Oils

ISOLINE

Dehydrated Castor Oil. First developed commercially in this country by Woburn Chemical Corp. (N.J.). Drying oil of pleasing odor. The films are light in color and do not after yellow. Films are also flexible with good adhesion, long life and water resistance. FOR:—lithographic inks, linoleum, paints and varnishes. (Supplied in viscosities of G-H, M, Z, Z2, Z3, on Gardner-Holdt scale).

ISOSTYRE

Styrenated Dehydrated Castor Oil devoid of free styrene, thus being practically odorless. Rapid drying into a light colored hard film with good flexibility, unusual adhesion, waterproofness, alkali resistance, and no after tack. Its uses include:—architectural white enamels, concrete paints, traffic paint, toy enamels and general purpose quality enamels, floor sealers, shellac substitutes, clear varnishes. (Supplied at 50% and 70% solids in Mineral Spirits and V.M.P. Naphtha).

SOYASTYRE 500

Styrenated Soya Bean Oil practically devoid of free styrene, thus being practically odorless. Rapid drying to a hard film with good flexibility, waterproofness, alkali resistance, adhesion and no after tack. For protective coatings where fast set and dry are required:—such as industrial, trade sales, architectural and toy enamels, aluminum, traffic and outside house paints. (Supplied in viscosities (G-H) . . . Z3 - Z5 Solid content 70%).

CONJULIN

For formulas requiring oils that form quick drying, water resistant, tack free films. Used in place of Linseed Oil in Ester Gum and Bakelite 254 Resin Varnishes, drying time and water resistance are superior, approaching the corresponding wood oil varnishes. For:—brake linings, insulation varnishes, wrinkle finishes, air dried and baked coatings, paint and varnish use. (Supplied in viscosities of Z - Z2 on Gardner-Holdt scale).

FATTY ACIDS

Complete line high quality specification Fatty Acids for wide variety of uses—Alkyd Resins—Cosmetics—Pharmaceuticals—Metallic Soaps — Driers — Esters — Rubber Compounding — Buffing and Drawing Compounds—Soaps and Greases. Write or call for further information.

Eastman

acetaldehyde

Eastman acetaldehyde is a versatile and valuable raw material for the manufacture of rubber chemicals, specialty resins, perfumes, drugs, dyes and disinfectants. It is miscible with water, alcohol, ether, acetone, benzene, gasoline, solvent naphtha, toluene and xylene.

Available in 4,000, 6,000 and 8,000-gallon insulated tank cars.

Sales offices in principal cities; see ad Catalog Section.

ACETONE (Dimethylketal, Dimethylketone, Ketopropane, Proacetic Ether, Methylacetyl, Propanone)

CH_3CACH_3. Colorless, inflammable liq., fragrant, mint-like odor. Sp. gr. 0.799 (25°C). M.P.—94°C. B.P. 55.5°-57.5°C. Miscible water, alcohol, ether, ethereal salts, many oils. Uses—mfr. acetone derivatives, acetone oil, chloroform, pharmaceuticals, iodoform, sulfonal, ionone, indigo, nigrosin, quinolin, diphenylamine and azo dyes, prepared motor fuels, lubricating compositions, rayon, rubber cements, horn substitutes, photographic films and plates, cellulose acetate plastics, celluloid, pyroxylin plastics; as solvent; solvent for starches, dextrins, smokeless powd., cordite, gum, petroleum products making artificial feather, artificial perfumes, asphalt bitumens, acetate dopes and varnishes, bituminous paints, nitro-cellulose lacquers, synth. and natural waxes and resins, purifying paraffin and rubber; denaturant for industrial alcohol; extracting medium; extracting fats and oils; disinfectant; cleansing agent; storing acetylene; treating hides; dyeing cotton with aniline black; degreasing wool; degumming silk; in medicine. Grades—U.S.P.; C.P.; tech.
● Pkg—1 gal. cans, 1, 5, 30, 54 gal. drums.

Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y
American-British Chem Supplies, 180 Madison Ave, N Y 16

Eastman

acetic anhydride

Eastman acetic anhydride is widely used for acetylations requiring a stronger reactant than acetic acid. Its high quality and uniformity recommend its use also as a dehydrating agent in reactions such as nitrations and sulfonations where the removal of water is necessary. Available in drums and tank cars.

Sales offices in principal cities; see ad Catalog Section.

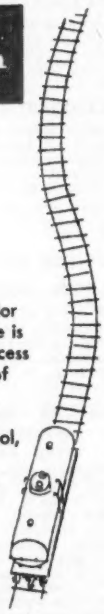
KETONES

Acetone, SOLVATONE solvent, Synthetic Methyl Acetone, Diethyl Ketone, Methyl Amyl Ketone, Methyl Isobutyl Ketone, Ethyl Butyl Ketone, Diisobutyl Ketone, Diacetone Alcohol, Acetophenone, Mesityl Oxide, Dypnone, Isophorone, Pentanedione-2,4, Acetonylacetone, and 2,6,8-Trimethyl Nonanone-4 are supplied commercially by Carbide. Ketones are intermediates for resins, dyes, and pharmaceuticals. The lower-boiling ketones are good solvents for nitrocellulose and vinyl chloride-acetate resins.

CARBIDE AND CARBON CHEMICALS COMPANY

A Division of

Union Carbide and Carbon Corporation
30 E. 42nd St. UCC New York 17, N. Y.



In Canada: Carbide and Carbon Chemicals, Ltd.

"Solvatone" is a trademark of UCC.

Eastman

acetone

Because of its excellent color and odor, Eastman acetone is desirable for use as a process solvent for the extraction of drugs and food products, and as a lacquer solvent. It is soluble in water, alcohol, ether and chloroform. Available in drums, and in compartmented and full tank cars.

Sales offices in principal cities; see ad Catalog Section.

ACETONYL ACETONE

$CH_3(CO)CH_2CH_2(CO)CH_3$. A colorless, water-sol. liq. B.P. 191.3°C. Solvent for cellulose acetate, with a xylene nitrocellulose dilution ratio of 1.8. A small per cent, reduces the viscosity of nitrocellulose and Vinylite resin solutions. Being a 1.4-diketone, it condenses with reagents to form ring compounds which are derivatives of furan thiophene, and pyrrole, thus providing a simple method for passing from open chain to cyclic compounds. Has a tanning effect on hides and skins.

●Pkg—1 gal. cans, 5, 55 gal. drums.

J M Baird Co, 254 W 31 St, N Y 1
*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17

ACETYL ISOBUTYRYL

$CH_3COCOCH(CH_3)$ Yellow liq. B.P. 118°C. Partly sol. in water. Uses—flavoring. Grades—commercial.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

ACETYL METHYL CARBINOL (Acetoin)

CH_3-CO-CHOH-CH_3. Sl. yellow liq. with tendency to slowly change into crystalline polymer which can be converted back into monomer by careful melting of cryst. S.G. 1.016 (15°C); B.P. 140°C.-144°C. Miscible with water in all proportions. In contact with air slowly oxidizes to diacetyl. Uses—in place of diacetyl in cases where diacetyl itself is too volatile. Grades—90% acetyl methyl carbinol.

J H DeLamar & Son, 461 W Erie St, Chicago 10, Ill
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Fairmount Chem Co, 600 Ferry St, Newark 5, N J
*Lucidol Div, 1740 Military Rd, Buffalo 5, N Y

N-ACETYL MORPHOLINE

● Pkg—1 gal. cans.

*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

ACETYL OXIDE see Acetic Anhydride

ACETYL PEROXIDE

$(CH_3CO)_2O_2$. M.W. 118. Crystal clear liq.; strong odor. Sol. most organic solvents. Uses—source of free radicals in organic synthesis; catalyst for bulk polymerization; modification of oils; vulcanizing and curing agent for rubber; decolorizing agent.

● Pkg—65 lb. carboys.

*Buffalo Electro-Chem Co, Sta B, Buffalo 7, N Y

ACETYLPHENOL see Phenyl Acetate

ACETYL-p-PHENYLENEDIAMINE see p-Aminoacetanilide

ACETYLPROPANE see Methyl Propyl Ketone

ACETYL PROPIONYL

$CH_3COCOCH_2CH_3$. Yellow liq. B.P. 106°-110°C. Partly sol. in water. Uses—flavors of butterscotch and chocolate type.

● Pkg—Bottles.

J M Baird Co, 254 W 31 St, N Y 1
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

3-ACETYLPYRIDINE

$C_5H_4N(COCH_3)$. M.W. 121.10. Colorless liquid. Uses—nutrition, organic synthesis.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Bios Labs, 17 W 60 St, N Y 23
*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

2-ACETYL THIOPHENE

Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Bios Labs, 17 W 60 St, N Y 23

ACETYL TRIBUTYL CITRATE

A colorless, odorless plasticizer of very low volatility and of high water resistance. Compatible with a wide variety of plastic materials such as the cellulose ethers and esters, polyvinyl and polyvinyl acetal resins, phenolics, alkyds, etc. Uses in products for injection or compression molding; also as a plasticizer in coatings.

● Pkg—25 lb. bottles, 50, 100, 500 lb. drums.

*Bios Labs, 17 W 60 St, N Y 23
E & F King & Co, 640 Pleasant St, Norwood, Mass
*Charles Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y

ACETYL TRIETHYL CITRATE

● Pkg—25 lb. bottles, 50, 100, 500 lb. drums.

*Bios Labs, 17 W 60 St, N Y 23
*Charles Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y

ACETYLENE (Ethine)

C_2H_2. M.W. 26.02. Colorless, poisenous, inflammable gas, garlic odor. Sp. gr. 0.91. M.P. —81.5°C. B.P. —83.6°C. Sol. alcohol, acetone, water. Uses—illuminant; oxyacetylene welding; organic synthesis; mfr. acetylene tetrabromide, acetylene tetrachloride, glass, calico printing, photographic paper, colors, inks; in medicine. Grades—tech.

● Pkg—Cylinders.

*Air Reduction Sales Co, 60 E 42 St, N Y 17
Thomas A Edison, Medical Gas Div, P O Box 15, Stuyvesant Falls, N Y
*Liquid Carbonic Corp, 3100 S Kedzie Ave, Chicago 23, Ill

ACIDS & AMMONIA

COMMERCIAL • REAGENT

ACETIC ACID, Glacial, Redistilled, Commercial and Treated Commercial and Reagent grades.

AMMONIA, Aqua, Commercial and Reagent, in a wide variety of grades and strengths.

BATTERY ACID

HYDROFLUORIC ACID, Anhydrous and in 60%, 70% and 80% strengths, and Reagent grades.

MIXED ACID, varying proportions of Nitric and Sulfuric Acids to meet customers' requirements.

MURIATIC (HYDROCHLORIC) ACID, in Standard, Diamond, Crystal (low impurities) and Reagent grades.

NITRIC ACID, Diamond Grade, practically water white and containing a minimum of impurities, in 36°, 38°, 40°, 42° Baume, 95% and fuming grades. Special Photo-engravers' Grade. Reagent A.C.S. grade noted for its uniform strength and freedom from impurities.

OLEUM, 10-65% free SO_3 content, higher on special order. Also oleums to which anti-freeze has been added.

OXALIC ACID, Commercial grades, crystals all thru 10 mesh containing a minimum of 99.5% oxalic acid. Also Reagent grade.

PHOSPHORIC ACID, Commercial and Reagent grades.

SUFAN®, Stabilized Sulfuric Anhydride.

SULFURIC ACID, in Standard, Diamond and Reagent grades.

For laboratory and fine chemical manufacturing uses, "B&A Quality" Reagent A.C.S. Acids

Eastman

acetic acid
(GLACIAL)

Characterized by uniformly high quality, Eastman glacial acetic acid is well suited for use as a raw material for many organic syntheses and as a reaction medium and solvent. It is soluble in water, alcohol and ether. Available in 8,000-gallon aluminum tank cars.

Sales offices in principal cities; see ad Catalog Section.

ACID, CARBAMIDE PHOSPHORIC

● Pkg—350 lb. drums.

J M Baird Co, 254 W 31 St, N Y 1

Let us solve your

ACID CHLORIDE

problems

Propionyl Chloride
Palmitoyl Chloride
Pelargonyl Chloride
Oleoyl Chloride
Stearoyl Chloride
Lauroyl Chloride
Caproyl Chloride
Myristoyl Chloride
Coconut Fatty Acid Chloride
. . . and many others.

We can supply technical and distilled grade acid chlorides in quantities from 100 lbs. to several tons per month.

Complete, modern facilities and technical skill are ready to serve you now. Write for further information about tailor-made organic specialties and custom process work.

417 SOUTH HILL ST.
LOS ANGELES 13, CALIF.

Reilly

CRESOLS
CRESYLIC ACIDS

CRESOLS: U.S.P., Ortho, Meta, Para, and special fractions—to all specifications.

CRESYLIC ACIDS: Standard grades to meet all specifications.

PHENOLS: Pure grades with melting points, 39°C., 39.5°C., and 40°C.; technical grades containing 82-84% and 90-92%; or to buyer's specifications.

TAR ACIDS, HIGH BOILING.

TAR ACID OILS: All grades.

XYLENOLS: (Low-boiling, High-boiling, Symmetrical) 1, 3, 5-Xylenol, 1, 2, 4-Xylenol, 1, 3, 4-Xylenol, and 1, 4, 2-Xylenol.

15 Plants to Serve You . . . . .

ACID, FUMAROLE see Acid, Boric

ACID, FUMING SULFURIC see Oleum

ACID, FUROIC (Acid, Pyromucic)

C_4H_3OCOOH. M.W. 112.03. Light gray solid which forms white cryst. from hot water. M.P. 131-3°C. Acidity 99.0-99.5%. Sol. in most common organic solvents; very sol. in hot (90°C) water. Uses—prep. of furan, halogenated furoic acid, halogenated furans, bactericides, and fungicides. Grades—tech.
● Pkg—5, 10, 25, 50 lb. pkgs., 10 lb. drums.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Quaker Oats Co, Chem Dept, Merchandise Mart Plaza, Chicago 54, Ill

ACID, GALLIC (Acid, Trioxybenzoic, Acid, Trihydroxybenzoic)

$C_6H_2(OH)_3CO_2H.H_2O$. 3:4:5. Colorless or sl. yellow cryst., needles or prisms. Sp. gr. 1.694. M.P. 222-240°C. with decomposition. Sol. alcohol, sl. sol. water, ether. Uses—mfr. gallates, pyrogallol, alizarine, thioflavine and gallo-cyanine dyes, writing inks; medicine; as photographic developer; mordant in dyeing; in engraving; tanning. Grades—U.S.P.; tech.
● Pkg—25, 100, 200, 250 lb. drums, bbls.

Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y
J T Baker Chem Co, Phillipsburg, N J
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

FINE HEYDEN CHEMICALS

formic acid
90% and 85%

Serves in many fields, including textile, leather, pharmaceutical and chemical manufacturing. Shipped in 65 and 125 lb. carboys and 525 lb. stainless steel drums.

sodium formate

Has proved its value in the dyeing, tanning, paper and chemical industries. Shipped in 300 lb. fiber drums.

HEYDEN CHEMICAL CORPORATION
342 MADISON AVENUE, NEW YORK 17, N.Y.
Chicago • Philadelphia • San Francisco • Detroit • Providence

ACID, METHOXY-BENZOIC see Acid, Anisic

ACID, 4—METHYLBENZENESULFONIC see Acid, p-Toluenesulfonic

ACID, METHYL FORMIC ESTER see Methyl Formate

ACID, METHYL-p-OXYBENZOIC see Acid, Anisic

ACID, METHYLENE DISALICYLIC

● Pkg—25, 50, 100, 250 lb. drums.

*Heyden Chem Corp, 342 Madison Ave, N Y 17

ACID, MILK see Acid, Lactic

ACID, MIXED (Acid, Nitrating)

A mixture of nitric and sulfuric acids of known composition, sold on the basis of N and S content. Typical mixtures are: nitric 36%—sulfuric 61%; nitric 45%—sulfuric 50%; nitric 70%—sulfuric 25%. Uses—mfr. dyes, T.N.T., smokeless powd., nitroglycerine, gun-cotton, picric acid, nitro-sugar, nitro-starch; as general nitrating agent. Grades—varying mixtures of nitric acid, sulfuric acid and water.
● Pkg—55, 110 gal. drums.

*American Cyanamid Co, Industrial Chem Div, 30 Rockefeller Plaza, N Y 20

NAPHTHENIC ACID

Carboxylic organic acids recovered from petroleum. A typical product has an acid number of 220 to 230 and 12% maximum unsaponifiable

PRINCIPAL USE

- For Paint and Varnish Driers

Also USEFUL for

- Wood and textile preservatives
- Cutting oils • Asphalt emulsions
- Low cost esters • Gelling agents
- Extreme pressure lubricants
- Rust preventatives
- Flotation agents

Write or phone for further information

Be sure to specify

ACID, PHOSPHORIC PASTE

A lime-phosphoric acid mixture containing not less than 50% P_2O_5. Uses—in the defecation of raw sugar solutions. Grades—wet paste; dry paste.

*Monsanto Chem Co, Phosphate Div, 1700 S 2 St, St Louis 4, Mo
Riches-Nelson, 342 Madison Ave, N Y 17
Shea Chem Corp, 1201 St Paul St, Baltimore 2, Md
*Virginia-Carolina Chem Corp, 401 E Main St, Richmond 8, Va

ACID, PHOSPHOROUS

H_3PO_3. Moist, colorless cryst. acid. Melts somewhat below 73°C. Decomp. when heated to 200°C. with liberation of phosphine. Forms mono and dibasic salts. Extremely sol. in water; very hygroscopic. Uses—reducing agent; mfr. phosphites.
● Pkg—5, 13 gal. carboys.

City Chem Corp, 132 W 22 St, N Y 11
Consumers Products Co, 99 Hudson St, N Y 13

THE KEY TO HARCHEM SEBACIC HEAT AND LIGHT STABILITY

SEBACIC ACID

AN UNUSUAL TOOL FOR THE CHEMICAL INDUSTRY

SEBACIC ACID is one of the most versatile basic raw materials available to the chemical industry. The HARDESTY CHEMICAL CO. manufactures Sebacic Acid in two grades—both of which are available in tonnage quantities.

Sebacic Acid is a free flowing powder, white in color, with a high melting point. Its chemical reactions are similar to those of other aliphatic acids and it is easily converted to esters, salts, amides, ester-amides, acid chlorides and many other useful derivatives. *Write for information*

USES: Widely used in Plasticizers, Alkyd Resins, Fibres, Paint Products and other applications where its high heat stability and purity are of great advantage.

HARDESTY CHEMICAL DIVISION
W. C. HARDESTY CO., INC.
41 East Forty-Second St., New York 17, N. Y.

Snyder Ave. and Swanson St.

Phila. 48, Pa.

STEARIC ACIDS

Unlike usual "stearic" acids (which contain less than 50% stearic acid) are Armour's fractionally distilled Neo-Fat stearic acids:

NEO-FAT 18-61 (75% stearic) affords uniform high quality at reasonable cost. Used in rubber, stearates, buffing compounds, greases, etc.

NEO-FAT 18 (90% stearic) offers maximum stearic acid concentration. A superior raw material for metallic soaps, cosmetics, pharmaceuticals, rubber compounding, hard greases, chemical synthesis.

DREW HYDROGENATED STEARIC ACIDS

DREW is one of the world's largest tonnage producers of distilled fatty acid products. Among these is Stearic Acid in grades up to 90%. Supplied primarily to leading manufacturers of non-ionic emulsifiers, cosmetics, medicaments, and the rubber industry. DREW Stearic Acid combines high titre with low iodine value, excellent color and mild odor.

ACID, TETRAHYDROXY-HEXANEDIOIC see Acid, Mucic

ACID, TETRAPHOSPHORIC

$H_6P_4O_{13}$. Sp. gr. 2.060 at 20°C. Practically a water-white, viscous liq. When diluted with water reverts to O-phosphoric acid. It is a material of high P_2O_5 content with no water present except that of chemical combination.

● Pkg—13 gal. Carboys.

City Chem Corp, 132 W 22 St, N Y 11
Shea Chem Corp, 1201 St Paul St, Baltimore 2, Md

ACID, THIOGLYCOLLIC (Mercaptoacetic Acid)

$HS.CH_2.COOH$. M.W. 92.09. Colorless liq. strong unpleasant odor. Sp. gr. 1.325. M.P.—16°C. B.P. 104-106°C. at 15 mm. Uses—as sensitive reagent for iron; mfr. of thioglycollates, permanent wave solutions & depilatories.

● Pkg—1, 6½, 13 gal. Carboys.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Evans Chemetics, 250 E 43 St, N Y 17
*Fairmount Chem Co, 600 Ferry St, Newark 5, N J

Hystrene* Hydrogenated Fatty Acids

mean highest purity in 3 ways

1. Controlled uniform concentrations of true stearic acid from 70% to 90%.
2. Unsaponifiable matter below 0.25%.
3. Iodine value below 0.8.

Exceptionally high color stability at elevated temperatures. Particularly suitable for soaps, esters and other derivatives.

ACIDS, PHOSPHINIC

$RPHO_2H$. Kerosene phosphinic acid contains a phosphorus-to-carbon linkage and is derived from the hydrocarbons contained in kerosene. It is a brittle, glassy solid of low melting point, soluble in most common organic oxygenated solvents. Benzene phosphinic acid has a characteristic phosphine-like odor. They have possible application as insecticides and fungicides as well as other applications characteristic of organic phosphorus compounds.

FRACTIONATED FATTY ACIDS

Armour's fractionally distilled fatty acids include commercially pure grades of:

Caprylic Acid
Capric Acid
Lauric Acid
Myristic Acid
Palmitic Acid
Stearic Acid
Double Pressed Stearic Acid

. . . as well as special mixtures of these acids and oleic-linoleic mixtures.

Also available are double distilled mixed acids:

Cottonseed
Corn Oil
Soybean
Coconut
Linseed
Palm Oil
Animal

PENACOLITE® ADHESIVES

● "Penacolite" resorcinol-formaldehyde synthetic resin adhesives are products especially adapted to the bonding of wood and other cellulosic materials, rubber, fiber boards, asbestos boards, and laminated phenolic plastics. The "Penacolites" are thermo-setting resins which cure at room temperature to give waterproof, and weather-proof bonds.

AGAL see Agar

AGAR (Agal, Bengal, Japan or Chinese Isinglass, Japanese Gelatin, Layor—Carang)

A vegetable gelatin extracted from various marine algae from Pacific and Indian Oceans. Colorless, amorp. Solid. Sol. hot water. Uses—mfr. adhesives; as thickener for soups, ice cream, milk and other foods; nutrient for bacterial cultures; size for silk; thickener and ingredient in dyeing and printing textiles; in sensitized photographic emulsions; in medicine. Grades—U.S.P. No. 1, 2, 3, as to quality and color. American agar, large flake, small flake, ground, bolted.

THE KEY TO HARCHEM BETTER PLASTICS

CAPRYL ALCOHOL
(OCTANOL-2)

HARCHEM CAPRYL ALCOHOL, a stable, high-boiling monohydric alcohol is produced in tank-car quantities and is widely used in many industries, including the following:

SOLVENTS
ESTERS
PLASTICIZERS
WETTING AGENTS
EXTRACTANTS
FOAM CONTROL AGENTS
HYDRAULIC OILS
PETROLEUM ADDITIVES
PERFUME INTERMEDIATES
RESINS

Perhaps this excellent industrial chemical will fill a need for you. Our Technical Staff will be glad to supply further information and assist you with your requirements. Your inquiries are invited.

Checking specs on long-chain fatty alcohols?

CACHALOT brand cetyl, oleyl, and stearyl alcohols are available in fourteen types, all made to tight specifications: saponification values below 1.0, acid values below 0.1, little or no odor. Useful as absorption bases, adherents, antifoams, emollients, emulsifiers, lubricants, penetrants, plasticizers, softeners, solubilizers, stabilizers, thickeners. And as intermediates: for brominates, chlorinates, condensates, esters, aldehydes, mercaptans, nitrites, sulfates, phosphates. Prompt delivery on USP, NF, and low-cost technical grades. Packed in sturdy cartons or steel drums. Write *M. Michel and Company, Inc., 90 Broad Street, New York 4, N. Y.* Or phone DIgby 4-3878. Over twenty-five years a basic supplier to chemical manufacturers, their trade name for the largest variety of fatty alcohols commercially available in tonnage lots of controlled purity is

ALCOHOL, HEXADECYL see Alcohol, Cetyl

ALCOHOL, n-HEXYL (Hexanol)

$CH_3(CH_2)_4CH_2OH$. M.W. 102.11. Colorless liq., insol. water. B.P. 115.8°C and has a Sp. Gr. of 0.8217 at 20°/20°C. Uses—synthesis.

J M Baird Co, 254 W 31 St, N Y 1
*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Matheson Coleman & Bell, 4101 Montgomery Rd, Norwood (Cincinnati), Ohio

ALCOHOL, HIGHER FATTY

Produced from natural fats or oils by reducing the fatty acids to the corresponding fatty alcohols. Alcohols most commonly used are cetyl, oleic, stearic, lanolic, laurel, oleyl and cholesterol. In the manufacture of the so-called "soapless soaps" these alcohols are then reacted with sulfuric acid, and the alcohol sulfate is neutralized with caustic soda to form the fat alcohol sulfate. See also sodium lauryl sulfate. Uses—for soap, in the place of ordinary soap in textile, laundry and general cleaning; in shampoos, etc.; as dyeing and printing assists.

2191 West 110th Street
Cleveland 2, Ohio

Available from Du Pont

LOROL*

FATTY ALCOHOLS

Six grades of "Lorol" fatty alcohols are available:

"Lorol" 5 and 7, mixtures made up principally of lauryl and myristyl alcohols
"Lorol" 20, normal octanol
"Lorol" 22, normal decanol
"Lorol" 24, normal cetyl alcohol
"Lorol" 28, normal stearyl alcohol

ISO-OCTYL, DECYL AND TRIDECYL ALCOHOLS

Clear, colorless liquids miscible with most oxygenated and hydrocarbon type solvents. Used to produce esters for vinyl resin and nitrile rubber plasticizers, lacquer and resin solvents, anti-foam agents, detergents, wetting agents, and synthetic lubricants.

SECONDARY BUTYL ALCOHOL

Clear, colorless liquid among medium boiling group of solvents. Solvent for lacquers and resins, component of hydraulic fluids, coupling agent. Employed in the preparation of esters, secondary butyl xanthate, methyl ethyl ketone.

PETROHOL (Isopropyl Alcohol)

Marketed in 91%, 95% and 99% concentrations. Clear, colorless liquid, completely miscible in water. Used in antiseptics, cosmetics, bactericides, rubbing compounds, crystallizations, drugs, cleaning agents, phenolic resin thinner, nitrocellulose dehydration, nitrocellulose coatings. Raw material for acetone, esters, isopropyl ether.

ALCOHOL, POLYVINYL

(CH_2CHOH). Colorless, odorless, tasteless, thermoplastic, synth. resin. Transparent when molded or cast in film form Dens. 1.27-1.30 (20°C). Sol. water; insol. ordinary org. solvents, oils, fats and greases. Uses—for sizing and greaseproofing paper; in adhesives; as an emulsifier; in gas and oil-impervious films and coatings, in oil-resistant extruded and molded articles. Grades—Type "A:" containing unsaponified acetyl groups. Type "B," fully saponified: both types available in low, medium, and high viscosities.
●Pkg—50 lb. bags, 125, 150 lb. drums.

ALGIN see also Sodium and Ammonium Alginates

White to dark brown solid with marked hydrophilic colloidal properties. Sol. in water; insol. in organic solvents. Properties of algin vary with source and method of mfr. pH 3-10; viscosity of 1% by wt. water solution, (10 to 4000 cps.) Moisture content, 5-20%; particle properties. Algin includes many of the properties of gelatin, tragacanth, caraya, acacia and locust bean gum, Irish Moss and agar-agar, and is used in lower concentrations. As colloidal stabilizer in ice cream, water ices, and other frozen desserts; suspending agent for cocoa fibers in chocolate milk; colloidal agent in various foodstuffs such as cakes, doughnuts, icings, salad dressings, and confectionery; sizing in textile industry; print pastes; leather finishing; paper coating; pharmaceuticals; cosmetics; waterproofing agent for concrete; boiler-water treatment; water paints; can-sealing compds.; ceramics; creaming latex in rubber mfr.; oil-well drilling muds. Grades—refined (food grades) and tech. (commercial grades).
●Pkg—50, 100, 200 lb. drums.

All the answers . . .
None of the problems

Makers of insecticides face four problems: (1) The buying of toxicants, (2) leftover stocks, (3) annoying shortages and, (4) costly delays. Many manufacturers of household, cattle, roach, and agricultural sprays, dusts, and aerosols have found MGK formulating service to be precise, prompt and profitable . . . the complete answer to these problems. Write for plans and prices.

MGK ALLETHRIN
Used in making over 35 million aerosol bombs. Approved for use by U.S. Military Service. Write for complete information.

Save the Scientific way with MGK

ALUMINUM CARBIDE

Al_4C_3. M.W. 143.91. Yellow hexag. cryst. Decomp. over 1400°C. Decomp. to methane in water; sol. acid; insol. acetone. Uses—prod. of methane, alloying.
●Pkg—Custom packed.

J M Baird Co, 254 W 31 St, N Y 1

ALUMINUM CHLORIDE (Chloralum)

$AlCl_3+6H_2O$. M.W. 241.43. Yellowish-white deliq. granular cryst. or powd. M.P. 190°C. (2.5 atms. pressure). B.P. 182°C. (752 mm pressure). Sol. water, ether, alcohol. Uses—refining petroleum; catalyst organic, inorganic compounds; carbonizing wool; assist in dyeing with indigo; water disinfectant: wood preservative; in medicine.
●Pkg—5, 10, 55 gal. bbls., drums.

ALUMINUM FORMO ACETATE

*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17

ALUMINUM GLUCONATE

A salt of varying comp., partly a colloidal suspension of $Al(OH)_3$ in gluconic acid; uses—in tanning.

*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

ALUMINUM HYDRATE see Aluminum Hydroxide

ALUMINUM HYDROXIDE (Aluminum Hydrate, Aluminum Trihydrate, Hydrated Alumina, Precepitated Aluminum Oxide, Hydrargillite, Gibbsite, Diaspore)

$Al(OH)_3$. White, amorp. powd. or lumps. Sp. gr. 2.426. Insol. water, alcohol; sol. hot HCl, H_2SO_4 alkalies. Uses—mfr. aluminum salts, glassware, printing and lithographic inks, lubricants; filtering medium, substratum in lakes; sizing paper; waterproofing textiles; ceramic glaze; mordant in dyeing; purifying water. Grades—96% light and dense; U.S.P.; C.P.; tech.; lump, powd.

*Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y

ALUMINUM LINOLEATE

Approx. $Al(C_{18}H_{29}O_2)_3$. M.W. 858.65. Yellow lumps or powd.; linseed oil odor. Insol. water; sol. oils, fixed alkali hydroxides. Use—mfr. lacquers.

*Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
°Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
*Nuodex Products Co, 830 Magnolia Ave, Elizabeth F, N J

ALUMINUM, METAL

Al. Silvery-white metal. Sp. gr. 2.7 M.P. 658°C. B.P. 1800°C. Sol. alkalies and some acids. Uses—for variety of purposes where great strength and low wt. is desirable such as in cooking utensils, airplanes, boats, automobiles, furniture. Also used in alloys.

°Aluminum Co of America, 1501 Alcoa Bldg, Pittsburgh 19, Pa
Aluminum Import Corp, 630 5 Ave, N Y 20
American Firstoline Corp, 420 Lexington Ave, N Y 17

*Nuodex Products Co, 830 Magnolia Ave, Elizabeth F, N J
*Fred'k A Stresen-Reuter, 2113 Medill Ave, Chicago 47, Ill

ALUMINUM NITRATE

$Al(NO_3)_3.9H_2O$. Colorless, white crystalline, very hygroscopic. M.P. 73°C (nine molecules of water or crystallization). B.P. decomp. at 100°C. Sol. cold water, alcohol, acetone. Uses—tanning leather, mordant in dyeing and printing textiles; incandescent electric light filaments. Grades—tech; C.P.
●Pkg—Custom packed.

*J T Baker Chem Co, Phillipsburg, N J
*General Chem Div, 40 Rector St, N Y 6
*Harshaw Chem Co, 1945 E 97 St, Cleveland 6, Ohio
*Mallinckrodt Chem Works, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Merck & Co, Rahway, N J

ALUMINUM OLEATE

$Al(C_{18}H_{33}O_2)_3 + 6H_2O$. Yellowish-white, solid gelatinous mass. Insol. water; sol. turpentine, oil, alkalies; very sl. alcohol, hot ether, benzine. Uses—paint and varnish drier; waterproofing textile; thickening lubricating composition; in turpentine solutions as lacquer for metals; as size. Grades—tech.
●Pkg—100 lb. kit, 400 lb. bbls.

°Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
*Nuodex Products Co, 830 Magnolia Ave, Elizabeth F, N J

Thompson Hayward Chem Co, 2915 Southwest Blvd, Kansas City 8, Mo

ALUMINUM PHOSPHATE

$Al(PO_4)$. White powd. Sol. mineral acids; insol. water. Uses—as a cement mixed with calcium sulfate and sodium silicate; as flux in ceramics.
●Pkg—100 lb. bags, drums, 100, 200, 700 lb. bbls.

°J T Baker Chem Co, Phillipsburg, N J
°Mallinckrodt Chem Works, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Monsanto Chem Co, Phosphate Div, 1700 S 2 St, St Louis 4, Mo
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ALUMINUM m-PHOSPHATE

$Al(PO_3)_3$. Approx. chem analysis: Al_2O_3. 19.0%, P_2O_5. 79.0%. Loss on ign.; 1.6%. Refractive index (Amorp.)=1.542±0.005. Suggested applications are as a pigment in paper mfr. and as a source of Al_2O_3 and P_2O_5 in special glasses.
●Pkg—100 lb. drums, 275 lb. bbls.

J M Baird Co, 254 W 31 St, N Y 1
*Monsanto Chem Co, Phosphate Div, 1700 S 2 St, St Louis 4, Mo
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

ALUMINUM POTASSIUM SULFATE see Alum, Potash

ALUMINUM POWDER (Aluminum Flake)

Al. Silvery solid. Sp. gr. 2.708. M.P. 700°C. B.P. approx. 2200°C. Sol. acids, alkalies; insol. water. Uses—mfr. aluminum salts, pyrotechnics, photographic flashlights, aluminum paints and varnishes, ammoniacal and other explosive compositions, rubber ingredients, paper coating, potteries and porcelains, aluminothermis welding, chemicals, alloys, electrical conductors, fire brick; as catalyst mfr. ammonia; absorbing occluded gases in mfr. steel; in chemical analysis. Grades—dust, flake, standard unpolished, powdered.
●Pkg—200, 300, 500 lb. drums.

ALUMINUM STEARATES

MONO-, DI-, and TRI-ACID SOAPS

- Our many grades, always uniform, permit standardization of formulas and processes.
- Specialized grades for specialized industries.
- Grease-Makers—Our Aluminum Stearate Technical D-51 will help you slash soap costs and boost grease yields.

Send for samples and Data Sheets.

ALUMINUM SULFATE (Cake Alum, Papermakers' Alum, Pearl Alum, Patent Alum, Pickle Alum)

$Al_2(SO_4)_2 + 18H_2O$. M.W. 666.40. White, solid powdered or granular crystalline. Loses water on crystallization, 48.6% when gradually heated to 200°C. Sp. gr. 1.62. Decomp. at 86.5°C. Sol. water, insol. alcohol. Uses—mfr. wood pulps, paper, alums, aluminum salts, printing inks, lubricants, red liquor, boiler compounds, lake colors, satin white, oil cloth, linoleum, ceramics, paper sizing; as filtering medium; waterproofing agent; mordant in dyeing; in clarifying fats and oils; tanning white leather; purifying water; deodorant and decolorizing petroleum; in medicine. Domestic product usually contains at least 17% Al_2O_3. Grades—commercial; iron free; lump, ground, powdered; N.F.; C.P.; U.S.P.

●Pkg—100 lb. bags, 25, 100, 200, 250 lb. drums. 325, 400 lb. bbls.

AMIDOETHANE see Ethyl Amine

AMIDO-MERCURIC CHLORIDE see Mercury, Ammoniated

AMINATE see Aminoguanidine Bicarbonate

AMINES see also Monoethanolamine, Diethanolamine, Triethanolamine, Ethylene Diamine, Acetoacetanilide, Monoamylamine, Diamylamine, etc.

A group of compounds derived from ammonia by substitution of organic radicals for hydrogen atoms. Class includes diamines ($2\ NH_2$ groups), primary and tert. amines, and quaternary bases, for both aliphatic and aromatic series. Amines used commercially include monoethanolamine, diethanolamine, ethylene, diamine, triethanolamine and acetoacetanilide. Uses—as bases; with fatty acids to form soaps; organic synthesis; removal CO_2 from inert gases; softening and moistening agents; acid gas absorbents; solvents, dispersing agents, plasticizing agents; medicinals; rubber accelerators and inhibitors; mfr. dyestuffs.

General Mills
FATTY AMINES!

KNOWN APPLICATIONS:
TEXTILES—water repellents, cationic softeners, antistatic reagents, dye fixatives, wetting agents.
MINING—selective flotation agents.
PETROLEUM—corrosion inhibitors, water treatment, industrial greases, asphalt binders.
DETERGENTS—foam stabilizers and extenders.
GERMICIDES—bactericides, fungicides.

Choose the Ones You Need!
• GM ALAMAC (fatty amine acetate)
• GM ALAMINE (fatty amine)
• GM ALITRILE (fatty nitrile)
• GM ALAMIDE (fatty amide)

There's a Fatty Amine for your specific need! Please indicate your requirements and we will be able to help you select the proper Fatty Amine.

CHEMICAL DIVISION
MINNEAPOLIS 1, MINNESOTA

AMIDES FROM FATS

The ARMIDS are a series of high molecular weight aliphatic amides having alkyl chain lengths of 8 to 18 carbon atoms.

The ARMIDS are available in commercial quantities for use in emulsions, printing inks, plastic anti-blocks, asphalt compounds, dye solubilizers, wax mixtures and chemical synthesis.

For descriptive bulletins and samples, write:

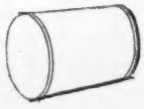
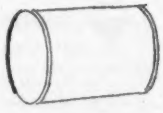
Eastman





aromatic amines

PRIMARY

2,5-dimethoxy aniline
2,5-diethoxy aniline

Readily diazotized to yield light-sensitive salts. Used in the manufacture of naphthol color bases.

SECONDARY

o-tolyl propanolamine

Typical secondary amine reactions. Forms azo dyestuffs when coupled with diazo salts. Ring may be nitrated, sulfonated or halogenated.

TERTIARY

phenyl ethyl ethanolamine
m-tolyl diethanolamine
phenyl diethanolamine

Highly reactive—may be nitrated, sulfonated, halogenated or esterified. Forms quaternary salts and may be coupled with diazo salts to form dyes.

These highly useful Eastman intermediates are available in drum lots.

Sales offices in principal cities; see ad in Catalog Section

AMINES FROM FATS

The ARMEENS and DUOMEENS are a series of high molecular weight aliphatic amines having alkyl chain lengths of 8 to 18 carbon atoms.

The ARMACS are the water-soluble amine acetates made from the ARMEENS.

Both ARMEENS and ARMACS are available in commercial quantities for use in cationic emulsifiers, wetting agents, plasticizers, water repellents, ore flotation reagents, synthetic detergents, germicides, chemical synthesis. For descriptive bulletins and samples, write:

AMINO-ISOPROPYLBENZENE see Cumidine

AMINOMETHANE see Methyl Amine

2-AMINO-2-METHYL-1,3-PROPANEDIOL

$CH_2OHC(CH_3)(NH_2)(CH_2OH)$. Colorless, odorless solid. Sol. water and alcohols. Uses—its soaps are valuable as emulsifying agents.

● Pkg—1 gal. cans, 5, 55 gal. drums.

*Commercial Solvents Corp, 260 Madison Ave, N Y 16
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

2-AMINO-2-METHYL-1-PROPANOL

$CH_3C(CH_3)NH_2CH_2OH$; Colorless liq. white crystalline solid. Sp. gr. .0934 at 20°C/20°C.; B.P. (760 mm) 165°C (10 mm) 67.4°C. M.P. 25-26°C. Sol. in water. Uses—emulsifying agent for oils, fats and waxes; absorbent for acidic gases; chemical synthesis.

● Pkg—1 gal. cans, 5, 55 gal. drums.

*Commercial Solvents Corp, 260 Madison Ave, N Y 16
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

a-AMINONAPHTHALENE see a-Naphthylamine

2-AMINO 6-OXYPURINE see Guanine

AMINOPHEN see Aniline

m-AMINOPHENOL

$NH_2C_6H_4OH$. M.W. 109.06. Buff crystalline powd. M.P. 122°C. Sol. alcohol. Uses—intermediate for the mfr. of dyes; intermediate in mfr. of p-Aminosalicylic Acid.

● Pkg—100, 150, 200 lb. drums.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Antara Chem Div, 435 Hudson St, N Y 14
*Carwin Co, Stiles Lane, N Haven, Conn
Conray Products Co, 510 Ave of the Americas, N Y 11

Republic Chem Corp, 94 Beekman St, N Y 38
*Wilson Organic Chem, Crossman Rd & Main St, Sayreville, N J

o-AMINOPHENOL

$C_6H_4.(NH_2)(OH)1:2$. White, crystalline powd. M.P. 170°C. Sol. water, alcohol, ether. Uses—mfr. azo, sulfur, hair and fur dyes. Grades—tech.; 99%; photographic: U.S.P.

● Pkg—Bbls., drums.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Bios Labs, 17 W 60 St, N Y 23
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Fairmount Chem Co, 600 Ferry St, Newark 5, N J
*Verona Chem Co, 26 Verona Ave, Newark 4, N J

o-AMINOPHENOL HYDROCHLORIDE

$C_6H_7ON.HCl$. M.W. 145.53. White cryst.; readily becoming gray on exposure to light. Sol. water, alcohol. Uses—in dying fur, hair, leather, etc.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Bios Labs, 17 W 60 St, N Y 23
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

p-AMINOPHENOL OXALATE

● Pkg—1 lb. bottles, 25, 100 lb. drums.

*City Chem Corp, 132 W 22 St, N Y 11
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

AMINOPHENOL SULFATE

● Pkg—Custom packed.

J M Baird Co, 254 W 31 St, N Y 1
Matheson Coleman & Bell, 4101 Montgomery Rd, Norwood (Cincinnati), Ohio

p-AMINOPHENOL SULFATE

● Pkg—Custom packed.

AMMONIUM ALKYL PHOSPHATES

NH_4RHPO_4. Concentrated aqueous solutions of the ammonium salts of the monomethyl, ethyl, propyl, butyl, and amyl o-phosphates. Insol. in alcohol. Find application as humectants and as fireproofing compounds with the distinctive property that treated materials retain luster and flexibility. The butyl, and particularly the amyl, derivatives possess good penetrating ability.

S L Abbot Co, 800 S Sante Fe Ave, Los Angeles 21, Cal

AMMONIUM AQUA see Ammonia Aqua

Monsanto SYTON

For Industrial Applications

● Syton, Monsanto's silica aquasol, is a colloidal solution of hydrated silica in water (30% by weight). Because of the nature and size of the silica micelle, various important properties may be imparted by simple addition to aqueous solutions. SOME SUGGESTED APPLICATIONS FOR SYTON: anti-slip agent in emulsion-type waxes; anti-blocking and gloss controlling agent in water-based finishes, latex and similar compounds; improvement and modification of the properties of latex and rubber products and other elastomeric systems; to surface harden water-based laminating resins; to aid in the suspension of pigments in aqueous systems; modification of paper and other filmlike materials to improve wettability, absorption and other surface characteristics; as a mold lubricant. MONSANTO CHEMICAL COMPANY, Merrimac Division, Boston 49, Massachusetts.

Syton: Reg. U. S. Pat. Off.

AMMONIUM BICHROMATE (Ammonium Dichromate)

$(NH_4)_2Cr_2O_7$. M.W. 252.10. Orange-yellow, needle cryst. Sp. gr. 2-153. Decomp. on heating. Sol. water, alcohol. Uses—mfr. inks, alizarine, sporting smokeless powd., synth. perfumes; purifying fats and oils; pickling agent for candlewicks; reagent in gum printing; in process engraving, photo-engraving and lithography; as mordant in dyeing and printing. Caution—poisonous.
● Pkg—100 lb. drums, 350 lb. bbls.

AMMONIUM BINOXALATE (Acid, Ammonium, Ammonium Bioxate, Ammonium Acid Oxalate)

$NH_4HC_2O_4.H_2O$. M.W. 125.06. Colorless rhombic cryst. Sp. gr. 1.56. Sol. 25 water; sl. sol. alcohol. Uses—as an ink eraser and reagent.
● Pkg—Bottles, 25, 100 lb. drums.

*Amend Drug & Chem Co, 117 E 24 St, N Y 10
*City Chem Corp, 132 W 22 St, N Y 11

AMMONIUM BIPHOSPHATE see Ammonium Phosphate (Mono)

AMMONIUM BITARTRATE (m-Ammonium Tartrate, Acid, Ammonium Tartrate)

$NH_4HC_4H_4O^3$ M.W. 167.1. Colorless cryst. Sol. hot water; insol. alcohol. Uses—for the detection of calcium, also in baking powd.

*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y

AMMONIUM BORATE (Ammonium Biborate, Ammonium Acid Tetraborate)

$NH_4HB_4O_7.4H_2O$. White cryst. Sp. gr. 2.38 to 2.96. Sol. water. Uses—mfr. fabrics; fireproofing; laundry purposes; fireproofing wood; in medicine. Grades—tech.; C.P.
● Pkg—100 lb. drums.

J M Baird Co, 254 W 31 St, N Y 1
*J T Baker Chem Co, Phillipsburg, N J
*Pacific Coast Borax Co Div, 630 Shatto Pl, Los Angeles 5, Cal

AMMONIUM BOROFLUORIDE see Ammonium Fluoborate

AMMONIUM BROMIDE

NH^4Br. White, sl. hygroscopic cryst. or powd. Sp gr. 2.548 (15°C). Sublimes. Sol. water, alcohol, ether Uses—precipitant of silver salts; in photography, engraving; laboratory reagent; in medicine. Grades—U.S.P. C.P.: pure: tech.
● Pkg—25, 50, 150 lb. drums, 400 lb. bbls.

AMMONIUM CARBONATE (Ammonia Crystals, Hartshorn Salts)

$(NH_4H)HCO_3 + (NH_4)(NH_2)CO_2$. Mixture of acid ammonium carbonate and ammonium carbamate. Analyses at 31% NH_3, 57% CO_2, 12% H_2O. White lumps, powd., chips or cubes. M.P. 85°C. Sol. cold water. Sl. sol. alcohol. Uses—mfr. ammonia salts, organic chemicals, casein colors, baking powd., casein glues and adhesives, fire extinguishing compounds, smelling salts and other perfume products, ceramics; as tanning, cleansing and vulcanizing agents; laboratory reagent; mordant in dyeing and printing; in washing wool; to make hollow goods; in medicine. Grades—U.S.P.; C.P.; tech.; powd., lump, cubes.
● Pkg—135, 140, 225, 325 lb. drums.

*American Agricultural Chem Co, 50 Church St, N Y 7

*Charles Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y

AMMONIUM DICHROMATE see Ammonium Bichromate

AMMONIUM ETHYL PHOSPHATE

75% solution in water. Water-white to yellow tinge. Ammoniacal odor. Sp. gr. 1.23 at 25°C. pH 75% solution to heat. When subjected to elevated temp. for any length of time as solution or white on any article will liberate ammonia with reduction in pH. Suggested Uses—as flame proofing agent for paper, textiles, etc.

● Pkg—500 lb. drums.

Elbert & Co, 2 Broadway, N Y 4
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

AMMONIUM FERROCYANIDE

$(NH_4)_4Fe(CN)_6.3H_2O$. M.W. 338.20. Greenish-yellowish cryst. Sol. water. Uses—as a reagent.

● Pkg—Bottles.

*J M Baird Co, 254 W 31 St, N Y 1
*City Chem Corp, 132 W 22 St, N Y 11
Republic Chem Corp, 94 Beekman St, N Y 38

AMMONIUM FLUOBORATE (Ammonium Borofluoride)

NH_4BF_4. M.W. 104.86. Hexagonal prisms. Sp. gr. 1.851 at 17°C. Sol. water, alcohol. Packages as required.

*American Agricultural Chem Co, 50 Church St, N Y 7
*General Chem Div, 40 Rector St, N Y 6
*Harshaw Chem Co, 1945 E 97 St, Cleveland 6, Ohio
Rosenthal Bercow Co, 25 E 26 St, N Y

AMMONIUM FLUORIDE (Meat Salt)

NH_4F. White, deliq. crystalline. Sublimes. Sol. water; sl. sol. alcohol. Uses—mfr. fluorides, etching glass; as laboratory reagent, disinfectant and antiseptic in brewing; mordant in dyeing and printing, improving sandy soils. Caution—should be packed in rubber containers. Grades—tech.; C.P.; U.S.P. cryst.

● Pkg—Custom packed.

American Firstoline Corp, 420 Lexington Ave, N Y 17

*Polak's Frutal Works, Middletown, N Y

n-AMYL CHLORIDE (1-Chloropentane)

$C_5H_{11}Cl$. M.W. 106.6 Sweet, colorless liq. Insol. water. Uses—sources of n-Amyl group, pharmaceutical intermediate.
● Pkg—Custom packed.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Mayco Chem Co, 5 Union Sq W, N Y 3
*Meta Chem Corp, 214½ Washington Ave, Carlstadt, N J

Quality Fine Chemicals

Ammonium Thiosulfate
(Crystals and 60% solution)
The ammonium equivalent of hypo—more soluble and more reactive. Working ingredient in rapid photographic fixers; brightener in heavy silver plating baths; proposed for wood treatment, manufacture of cellulose esters.

Benzotriazole
(Photographic and Technical)
Photographic restrainer for high contrast work; corrosion inhibitor; should be valuable as antioxidant and intermediate.

The Ringwood Chemical Corporation manufactures organic chemicals of high purity and formulates chemical specialties.
Take advantage of Ringwood facilities for the confidential manufacture of intermediates and specialties for the chemical processing industries.

tert.-AMYL CHLORIDE

$C_5H_{11}Cl$. M.W. 106.6. Sweet odorless liq. B.P. 85°C. Insol. water. Uses—organic syntheses.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

AMYL CHLORIDE, ISO

$CH_3.CH_2.CH_2.CH_2.Cl$. Colorless or straw color liq. Sp. gr. (20°C). 0.885. Sol alcohol, ether. Wt. per gal. 7.38 lbs. Uses—solvent in nitrocellulose, varnishes, lacquers, chemicals, plastics; miscellaneous solvent; in waterproofing textiles.

J M Baird Co, 254 W 31 St, N Y 1
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

AMYL CHLORIDES, MIXED

$C_5H_{11}Cl$. M.W. 106.58. Straw to deep purple color. Sp. gr. 0.88. Uses—synthesis of other "amyl" compounds; solvent.

● Pkg—5, 55 gal. drums.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

a-AMYL CINNAMIC ALDEHYDE

Clear yellow, oily liq. Jasmin-like odor. Aldehyde content 99-100%. Sp. gr. 0.968-0.973 (15°C); B.R. 116°-120°C (1.5 mm). Uses—perfumery.

● Pkg—Custom packed.

AMYL 2,4-DICHLOROPHENOXYACETATE

Colorless liq. containing equivalent of approx. 76% of 2,4-D acid. Insol. water; sol. alcohol, kerosene, diesel oil, aromatic petroleum fractions. Uses—for formulation in weed killers.

*Associated Sales & Supply Co, 5137 Southwest Ave, St Louis 10, Mo

AMYL FORMATE (Isoamyl Formate, -n Formic Ester)

$H.COO.C_5H_{11}$. M.W. 116.13. Made by treating isoamyl alcohol with formic acid. Has plum smell and is almost water-white. Sp. gr. 0.871 (0.°C). B.P. 123.3-125°C. Ester value 483.8. Miscible in alcohol or ether, very sl. in water. Uses—as a pyroxylin solvent; perfuming leather.

● Pkg—Custom packed.

P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 900 Van Nest Ave, Bronx, N Y
*Fritzsche Bros, 76 9 Ave, N Y 11
*Polak's Frutal Works, Middletown, N Y

AMYLHYDRIDE see Pentane

AMYLHYDROXIDE see Alcohol, n-Amyl

AMYL IODIDE, ISO (Iso-Iodopentane)

$(CH_3)_2CH(CH_2)_2I$. M.W. 198.02. Colorless liq. Sp. gr. 1.510. B.P. 148°C. Insol. water; sol. alcohol, ether. Uses—organic synthesis, pharmaceuticals. Grades—pure, tech.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Edcan Labs, 10 Pine St, S Norwalk, Conn
*Reade Mfg Co, 135 Hoboken Ave, Jersey City 2, N J

AMYL LAURATE

$C_{11}H_{23}COOHC_5H_{11}$. Sp. gr. 0.860 at 20°C. B.R. 290-330°C.

Florasynth Labs, 900 Van Nest Ave, Bronx, N Y

AMYL MERCAPTAN (Pentanethiol)

$C_5H_{11}SH$. M.W. 104.14. Dist. Range, 80-125°C. Sp. gr. 0.8248 (20°C). Vapor Pressure 29 mm (22°C). Viscosity 0.005566 Poise (20°C). Refractive Index 1.4006 (20°C). Surface Tension 25.7 Dynes/cm. (13° C). Spec. Heat at room temp., 0.48 cal/gram. Heat of vap., 78 cal./gram. Coeff. of Exp., 0.00110 (20-60° C). Available commercially as a mixture of its various isomers. Uses—as a stench; as a flotation reagent; starting point in organic syntheses.

● Pkg—5, 55 gal. drums.

*Bios Labs, 17 W 60 St, N Y 23
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
*Sharples Chem, 123 S Broad St, Phila 9, Pa

tert.-AMYL MERCAPTAN

$C_5H_{11}SH$. M.W. 104.36. B.R. 96-121°C. Uses—chemical intermediate.

● Pkg—Quart, 1 gal. bottles 5 gal. drums.

*Bios Labs, 17 W 60 St, N Y 23
*Phillips Petroleum Co, Special Products Div, Bartlesville, Okla
*Sharples Chem, 123 S Broad St, Phila 9, Pa

AMYL MYRISTATE

*Bios Labs, 17 W 60 St, N Y 23

AMYL NAPTHALENES, MIXED

Refined: Yellow to brown viscous oily liq. Sp. gr. at 20°C 0.94-0.96. Distillation—initial B.P. not below 288°C; 95% distils below 362°C; final B.P. not above 367°C. Wt. per gal. 7.90 lbs. A distilled mixture of monoamyl diamyl naphthalenes, each containing the amyl group in its isomeric forms; are alkylated aromatic hydrocarbons not affected under ordinary conditions by water or dilute acids or alkalies. Uses—high-boiling solvent and plasticizers for synth. resins and asphaltic materials; in mfr. of certain types of inks and vitrifiable colors; as a medium for constant temp. baths; coupling agent for certain vegetable and mineral oils; in mfr. of chemicals for the textile industry.

● Pkg—5, 55 gal. drums.

*Sharples Chem, 123 S Broad St, Phila 9, Pa

AMYL NITRATE

*Bios Labs, 17 W 60 St, N Y 23
*Ethyl Corp, 100 Park Ave, N Y 17

AMYL OLEATE

$C_{17}H_{33}COOC_5H_{11}$. M.W. 352.34. Sp. gr. 0.862. B.R. 253-272°C. M.P. 6.0°C. Water-white, faint fruity odor.

*Bios Labs, 17 W 60 St, N Y 23
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
*Morton-Withers Chem Co, 2110 High Point Rd, Greensboro, N C
*Nopco Chem Co, Logan & Davis Sts, Harrison, N J

AMYL PHENOL (l-Amyl-p-Phenol, l-Amyl-4-Hydroxy-Benzene)

$C_5H_{11}C_6H_4OH$. M.W. 164.18. White needles. Sl. sol. water; sol. alcohol, ether. Uses—in the mfr. of synth. resins, and for varnishes and antiseptic emulsions.

● Pkg—5, 55 gal. drums.

Martin, Hoyt & Milne, 623 Merchants Exchange Bldg, San Francisco, Cal
*Reilly Tar & Chem Corp, 1615 Merchants Bank Bldg, Indianapolis 4, Ind
*Sharples Chem, 123 S Broad St, Phila 9, Pa

o-AMYL PHENOL

$C_5H_{11}C_6H_4OH$. M.W. 164.12. Color—pale yellow. Sp. gr. at 30°C 0.96-0.97. Distillation—initial B.P. not below 223°C; final B.P. not above 245°C. Flash point 219°F. Wt. per gal. 8.12 lbs. Uses—anti-skinning agent for paints, varnishes and oleoresinous enamels.

● Pkg—5, 55 gal. drums.

Martin, Hoyt & Milne, 623 Merchants Exchange Bldg, San Francisco, Cal
Republic Chem Corp, 94 Beekman St, N Y 38
*Sharples Chem, 123 S Broad St, Phila 9, Pa

p-sec.-AMYL PHENOL

$C_5H_{11}C_6H_4OH$. M.W. 164.2. Light straw solid. Uses—organic synthesis.

● Pkg—5, 55 gal. drums.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Sharples Chem, 123 S Broad St, Phila 9, Pa

p-tert.-AMYL PHENOL

$C_5H_{11}C_6H_4OH$. Sp. gr. 0.91-0.94 (95°C.). M.W. 164. Softening Point not less than 80°C. Final M.P. not less that 88°C. Distillation 90% bet. 250-265°C. Solubility—sol. 10% aqueous KOH. F.P. 256°F. Insol. water; readily sol. most organic solvents. Impurities—non-volatile matter, not over 0.001%. Free phenol, less than 0.1%. Very small amounts of amyl phenyl ethers and secondary amyl phenol. Uses—mfr. oil sol. varnish resins of phenol-formaldehyde type.

● Pkg—100 lb. cartons.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Sharples Chem, 123 S Broad St, Phila 9, Pa

AMYL PHOSPHATE

$C_5H_{11}.H_3PO_4$. Syrupy liq. Uses—solvent, plasticizer.

*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

AMYL PROPIONATE

$CH_3.CH_2CO_2C_5H_{11}$. Water-white liq. Sp. gr. 0.862-0.866 at 20°/20°C. Wt. per gal., 7.19 lbs. at 20°C. B.P. 160°C. Uses—solvent for nitrocellulose where high-boiling solvent is desirable; in brushing lacquers.

● Pkg—Custom packed.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

SILICONE ANTIFOAM A

Dow Corning Antifoam A is a silicone compound used to control foam in a wide variety of aqueous and nonaqueous systems. It is effective during steam distillation or vacuum concentration. Tests show it is physiologically harmless. Effective concentrations range from 20 to 200 parts per million. Hence, there is little danger of product contamination.

Dow Corning Antifoam A compound can be used as received, mixed with one of the foaming ingredients or dispersed in such solvents as ethyl ether, gasoline, 2 ethyl hexanol, methylene chloride, pine oil and tetrachlorethylene for industrial applications. Controls foaming of adhesives, synthetic rubber, caustic liquor, varnishes, soap, wine and many other products.

Equally versatile and more easily dispersed, Dow Corning Antifoam AF Emulsion is a water dilutable defoamer containing 30% Antifoam A solids. Originally designed for use in the food processing industries, Dow Corning Antifoam AF Emulsion has a wide field of industrial usefulness.

DOW CORNING SILICONES

DOW CORNING CORP. MIDLAND, MICHIGAN

ANTHRAQUINONE (Diphenyleneketone, Dyhydrodiketoanthracene)

$C_6H_4(CO)_2C_6H_4$. Yellow needles. Sp. gr. 1.419-1.438. M.P. 284.65°C. B.P. 382°C. Only sl. sol. alcohol, ether; more sol. in hot benzene; insol. water. Uses—mfr. derivatives, alizarin, quinazarin and purpurin dyes. Grades—sublimed; tech.; 30% paste (sold on 100% basis).

ANTI-FREEZE, MASONRY

Compounds added to concrete, mortar, etc., to accelerate the setting of the batch in cold weather, quantity used being dependent upon the temp. at which the work is being done.

*Hampden Color & Chem Co, 5 Albany St, Springfield, Mass
*Sika Chem Corp, 35 Gregory Ave, Passaic, N J
*Sullivan Co, 212 E Trigg Ave, Memphis, Tenn
Virginia-Carolina Chem Corp, 401 E Main St, Richmond 8, Va

ANTI-FROTHING AGENTS, PAPER

Products which are added in the beaters to prevent froth from forming, insuring a finished paper free from unevenness. Anti-froth oils, such as pine oil, sulfonated castor oil, etc., are used to eliminate foaming of the coating mixture, thereby preventing pin-holes in the coating.

*Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y

ANTIMONY SULFURET see Antimony Sulfide

ANTIMONY TARTRATE

$Sb_2(C_4H_4O_6)_3.6H_2O$. M.W. 795.71. White cryst. powd. Sol. water. Uses—medicinal; in syntheses.

*Amend Drug & Chem Co, 117 E 24 St, N Y 10
J M Baird Co, 254 W 31 St, N Y 1
*Barium & Chem, Willoughby, Ohio

ANTIMONY TRIBROMIDE (Antimonious Bromide)

$SbBr_3$. Yellowish, deliq. cryst. Sp. gr. 4.148. M.P. 96.6°C. B.P. 280°C. Sol. carbon disulfide, hydrobromic acid, alcohol, alkalies. Uses—mfr. antimony salts; laboratory reagent; mordant; staining iron and copper articles. Grades—tech.

● Pkg—Bottles.

*Barium & Chem, Willoughby, Ohio
*City Chem Corp, 132 W 22 St, N Y 11

ANTIMONY TRICHLORIDE (Butter of Antimony, Antimonious Chloride)

$SbCl_3$. M.W. 228.13. Colorless, very deliq., translucent cryst. mass; fumes sl. in air. Sp. gr. 3.14; M.P. 73°C. B.P. 225°C. Sol. alcohol, benzene, carbon disulfide, chloroform, ether, acetone. Uses—reagent for chloral aromatic hydrocarbons and Vit. A.

● Pkg—100 pails, 50, 100, 700 lb. drums.

*J T Baker Chem Co, Phillipsburg, N J
*Barium & Chem, Willoughby, Ohio
*General Chem Div, 40 Rector St, N Y 6
*Harshaw Chem Co, 1945 E 97 St, Cleveland 6, Ohio

IMPRUVOL 33®

● "Impruvol 33"—an antioxidant for motor and aviation gasolines, consisting of a 33-1/3 percent by weight solution of Di-tertiary-Butyl-para-Cresol in toluene. Non-toxic and non-irritating, "Impruvol 33" can be pumped directly into gasoline lines. In retarding the formation of gum resulting from oxidation, this inhibitor neither contributes to engine deposits nor imparts color to the gasoline.

IMPRUVOL 20®

New Antioxidant for Transformer Oil

"IMPRUVOL 20"—a compound oil solution of di-tertiary-butyl-para-cresol (DBPC)—greatly extends useful life of transformer oils. Practically all transformer manufacturers have adopted inhibited oil as "standard equipment"—with DBPC as the inhibitor in all instances. "Impruvol 20" can be used easily with the simplest equipment.

FINE HEYDEN CHEMICALS

anti-skinning agents

LIGNOCOL®

Retards skinning in enamels, spar varnish and printing inks during storage and prevents wrinkling after the film has been cast. Particularly applicable in dipping tanks and industrial finishes where stubborn problems are encountered.

GUAIACOL, Liquid Technical

Effectively inhibits skinning in paints, varnishes and printing inks and controls oxidation in putties and hydrocarbon solvents subject to gumming.

M.D.A.® (Methylene Disalicylic Acid, Technical)

A dibasic acid for use in the manufacture of alkyd resins and modified phenolic compositions and as a chemical intermediate.

HEYDEN CHEMICAL CORPORATION

ARSENIC, FREE

As. At. Wt. 74.91; At. No. 33. M.P. sublimes (500° C m.p. under pressure); B.P. 615; Sp. gr. 5.73. Valence 3.5. Semi-metallic element, rarely found free; occurring as realgar and arsenical pyrites. Steel-gray, brittle, cryst. mass; subliming on eating and depositing partly cryst., partly black amorphous solid. Uses—in bronzing; alloys; infr. arsenic sulfides, shot, certain glass; in pyrotechnics.

Fallek Products Co, 163 Broadway, N Y 6
International Commodities Corp, 11 Mercer St, N Y 13
George F Smith, 60 E 42 St, N Y 17

ARSENIC IODIDE (Arsenious Iodide, Arsenic Tri-iodide)

AsI_3. M.W. 455.69. Orange-red scales or powd. Sp. gr. 4.39. M.P. 146°C. B.P. 403°C. Sol. water, alcohol, ether, carbon bisulfide. Uses—laboratory reagent; in poisons; in medicine. Poisonous. Grades—U.S.P.; tech.

*City Chem Corp, 132 W 22 St, N Y 11
*Edcan Labs, 10 Pine St, S Norwalk, Conn
New York Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y

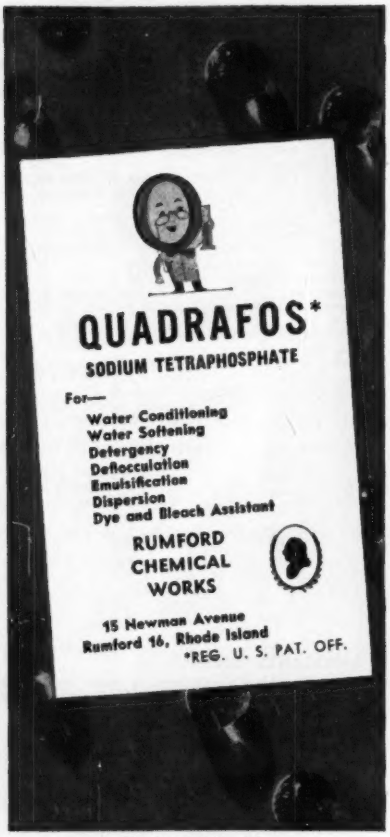
Asbestos FIBER PRODUCTS



Because of their resistance to the corrosive action of acid fumes, vapors and gases, asbestos fiber and asbestos products have a wide range of applications in the chemical industry.

Johns-Manville produces all grades and lengths of asbestos fiber, each representing the highest value in its class and the utmost uniformity in grading and volume. J-M Asbestos Products include:

● Insulations ● Transite Movable Walls ● Brake Linings ● Clutch Facings
● Chemstone Panels ● Roofing and Siding ● Transite Industrial Vent Pipe
● Packings and Gaskets ● Flexboard ● Flooring ● Transite Water and Sewer Pipe

MILLMASTER

BARIUM OXIDE, POROUS

BaO. Specially prepared for drying and dehyrating gases, liq. and solids at temp. to 1000°C. Reacts violently on contact with water. Care should be exercised in handling. Available in lump form or granulated to various mesh sizes.

Amend Drug & Chem Co, 117 E 24 St, N Y 10
*Barium & Chem, Willoughby, Ohio
*Millmaster Chem Corp, 11 W 42 St, N Y 36
G Frederick Smith Chem Co, 867 McKinley Ave, P O Box 1611, Columbus 16, Ohio

BARIUM PERCHLORATE

$Ba(ClO_4)_2$. M.W. 336.27. White crystalline material. L. M.P. 505°C. Sol. water, alcohol. Uses—dehydrating agent.

●Pkg—Custom packed.

*Barium & Chem, Willoughby, Ohio
City Chem Corp, 132 W 22 St, N Y 11
*G Frederick Smith Chem Co, 867 McKinley Ave, P O Box 1611, Columbus 16, Ohio

BARIUM PERMANGANATE

$Ba(MnO_4)_2$. M.W. 375.3. Brownish violet crystals; sol. water. Uses—mfr. permanganates, pure permanganic acid; in research. It is more active and less stable than potassium permanganate.

*Barium & Chem, Willoughby, Ohio
Blos Labs, 17 W 60 St, N Y 23

BARIUM SULFATE, PRECIPITATED see Blanc Fixe

BARIUM SULFIDE (Barium Monosulfide)

BaS. Grayish-white powd., tech.—brownish-black powd. in lumps. Sp. gr. 4.25 (15°C). Infusible. Decomp. in water. Uses—mfr. barium salts, hydrogen sulfide gas, luminous paints; for producing rich shades of brown coloring on copper; vulcanizing rubber; weighting gutta percha; laboratory reagent; as depilatory. Grades—tech.; C.P.

●Pkg—25 lb. jars, 25, 100, 700 lb drums, 100 lb. bags

BARIUM SULFITE

$BaSO_3$. White powd. Decomposes on heating. Sol. acids. Uses—mfr. paper; in catalytic chemical processes. Grades—Tech.

●Pkg—1, 5 lb. bottles, 25 lb. drums

*Barium & Chem, Willoughby, Ohio
*City Chem Corp, 132 W 22 St, N Y 11

BARIUM THIOSULFATE (Barium Hyposulfite)

$BaS_2O_3 + H_2O$. White crystalline powd. Sp. gr. 3.3 Sl. sol. water. Uses—mfr. luminous paints and varnishes, matches, explosives.

*J T Baker Chem Co, Phillipsburg, N J
*Barium & Chem, Willoughby, Ohio

BARIUM ZIRCONIUM SILICATE

●Pkg—80 lb. bags, 500 lb. drums

*Bios Labs, 17 W 60 St, N Y 23
*Bram Chem Co, 820 65 Ave, Phila 26, Pa.

BARREL-LINING COMPOUNDS

Products usually formulated from asphalt, certain forms of pure pitch or synth. resins suitable for lining the inside of barrels, beerbarrels or containers, etc., to prevent contamination, corrosion, etc. See also enamels, brewers; also pitch, brewers.

BASTARD SAFFRON see Saffron, American

BATES, TANNING

Hides and skins are bated first, to remove the free and combined lime, and second, to reduce the swelling of the collagen fibres, caused by the lime, thereby restoring the hides and skins to the required degree of softness or flaccidity. Before the introduction of modern synth. bates, the most commonly used materials were hen, pigeon, and dog dungs. When hen or pigeon dung was used, the process was called bating, and when dog dung was used it was called puering. Value of dung for deliming and falling purposes was caused by its ammonium chloride content and presence of certain enzymes. Artificial bates are usually compounded with a suitable ammonium salt, pancreatic enzymes, and an inert filler.

PORCEL Hard, highly adsorbent, large-surface-area activated bauxites utilizing either foreign or domestic ores. Supplied in various standard meshes, moisture contents, and in regular, low iron or low silica grades.

Recommended generally as an adsorbent, catalyst and catalyst carrier. Used widely as a lubricating oil and wax percolating medium, vapor phase desulphurization catalyst, aluminum chloride catalyst support and trap, refining medium for sugar liquors, and as an agent for the removal of fluoride contaminants from hydrocarbon streams.

BENZENE

Benzene derived from petroleum and meeting ASTM Specification D-836-47

USEFUL FOR

- The PRODUCTION of styrene, phenol, detergent alkylate, aniline, insecticides and many other chemical derivatives.
- As a SOLVENT in a wide variety of applications.

BERYL (Beryllium Aluminum Silicate)

A mineral. $3BeO.Al_2O_3.6SiO_2$; hex. grn. Sp. gr. 2.63-2.91; hardens 7.5-8.0; M.P. 1410°C. ±100. Uses—mfr. beryllium and beryllium salts, gem stones (emerald).

MONSANTO
SANTOPHEN 1 GERMICIDE
(ortho-Benzyl-para-chlorophenol, Tech.)

Specifications: White to light tan or pink flakes; crystallizing point 45.0°C. min.; Sp. Gr. 1.202-1.206 at 55°/55°C.; free acidity (as HCl) 0.01% max.; odor slight phenolic max.

Also available as Santophen 1 Solution: 75% Santophen 1 by weight; 25% isopropanol.

An effective germicide with low toxicity to higher animals.

Santophen: Reg. U.S. Pat. Off.

BERYLLIUM ALUMINUM SILICATE see Beryl

BERYLLIUM CARBONATE, BASIC

●Pkg—Bottles.

Berkshire Chem, Graybar Bldg, 420 Lexington Ave, N Y
*City Chem Corp, 132 W 22 St, N Y 11
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

BERYLLIUM CHLORIDE

$BeCl_2$. M.W. 79.93. White cryst. Very deliq. Sp. gr. 1.899 @ 25°C. M.P. 440°C. B.P. 520°C. Sol. water, alcohol, benzene, ether.

*Fairmount Chem Co, 600 Ferry St, Newark 5, N J
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

MONSANTO
BENZYL CHLORIDE

Specifications: Clear to slightly turbid, colorless to yellow liquid; Sp. Gr. 1.105-1.110 at 15.5°/15.5°C. Distillation range: first drop 177.5°C. min.; 95% (1-96 ml) 3.0°C. max.; dry point 185.0°C. max.

MONSANTO CHEMICAL COMPANY
Organic Chemicals Division,
St. Louis 1, Missouri

SERVING INDUSTRY . . . WHICH SERVES MANKIND

MONSANTO CHEMICALS – PLASTICS

*Company classifies itself as manufacturer or producer of this product

BERYLLIUM FLUORIDE (Glucinum Fluoride)

BeF_2. M.W. 47.02. Sp. gr. 1.986. M.P. 800°C.
● Pkg—Drums.
*Brush Beryllium Co, 4301 Perkins Ave, Cleveland 3, Ohio
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

BERYLLIUM HYDROXIDE

$Be(OH)_2$. M.W. 43.04. White, amorp. powd. Sol. acids. Uses—beryllium compounds; bonding material and addition agent.
*Brush Beryllium Co, 4301 Perkins Ave, Cleveland 3, Ohio

BERYLLIUM, METAL

Be. Non-corrodible, grayish-black metal in hexagonal cryst. Related to magnesium group. Sp. gr. 1.85 (20° C). M.P. 1350°C. Sol. acids, alkalies. Uses—mfr. alloys to impart strength and hardness, particularly aluminum alloys; mfr. beryllium salts.
● Pkg—Drums.
*J M Baird Co, 254 W 31 St, N Y 1
*Belmont Smelting & Refining Works, 330 Belmont Ave, Bklyn 7, N Y

*Simpson Labs Div, 120 Wall St, N Y 5
George Uhe Co, 76 9 Ave, N Y 11

BISMUTH SULFATE

$Bi_2(SO_4)_3$. M.W. 760.18. White cryst., acid reaction. Sp. gr. 5.08. Decomp. by water or alcohol into basic salt; sol. acids.

●Pkg—1, 5 lb. bottles, 25, 100 lb. drums.

*City Chem Corp, 132 W 22 St, N Y 11

BISMUTH TERNITRATE see Bismuth Nitrate

BISMUTH TRI-BROMOPHENATE (Tribromophenol-Bismuth)

Approx. $BiOH.(C_6H_2Br_3O)_3.Bi_2O_3$. M.W. 1351.5. Yellow, almost odorless, tasteless powd. Insol. water, organic solvents. Uses—in medicine as intestinal antiseptic.

●Pkg—5 lb. bottles, 25 lb. jars.

Amend Drug & Chem Co, 117 E 24 St, N Y 10
Bios Labs, 17 W 60 St, N Y 23
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6 ,N Y

BISMUTH TRICHLORIDE see Bismuth Chloride

BISMUTH TRIFLUORIDE see Bismuth Fluoride

BISMUTH TRINITRATE see Bismuth Nitrate

BISMUTH TRIOXIDE (Bismuth Oxide, Bismuth Yellow, Flowers of Bismuth)

Bi_2O_3. Yellow powd. Sp. gr. 8.8. M.P. 820°C. Sol. acids. Uses—mfr. bismuth salts, red glass, ceramic colors; in medicine. Grades—tech.; C.P.

●Pkg—Bottles, 25 lb. drums.

*J T Baker Chem Co, Phillipsburg, N J
*New York Quinine & Chem Works, 99 N 11 St, Bklyn 11, N Y
*Charles Pfizer & Co, 630 Flushing Ave, Bklyn 6, N Y

BISMUTH WHITE see Bismuth Subnitrate

BISMUTH YELLOW see Bismuth Trioxide

BISMUTHOUS CHLORIDE see Bismuth Chloride

BISMUTHYL CARBONATE see Bismuth Subcarbonate

BISMUTHYL CHLORIDE see Bismuth Oxychloride

BISMUTHYL NITRATE see Bismuth Subnitrate

BITTER SPAR see Dolomite

BITUMEN see Asphaltum

BIVINYL see Butadiene

BIXINE see Annatto

BLACK BALSAM see Balsam, Peruvian

BLACK CATECHU see Cutch

BLACK OXIDE of Manganese see Manganese Dioxide

BLACK PRECIPITATE see Mercurous Chloride

BLACK ROUGE see Iron Oxide

BLANC D'ESPAGNE see Bismuth Oxychloride

BLANC DE PERLE see Bismuth Oxychloride

BLANC FIXE (Precipitated Barium Sulfate, Synthetic Barytes, Synthetic Heavy Spar, Permanent White, Terra Ponderosa—see also Barium Sulfate)

$BaSO_4$. White powd. Uses—mfr. barium salts, special glass, lithographic and printing inks, cements, glazed and wall papers, paper hangings; as substratum for color lakes; in X-ray work; filler for white feather, linoleum, paints and varnish, paper, rubber and in making cloth; pigment and white lead substitute; substratum in making photographic paper. Grades—tech.; C.P.; U.S.P.

●Pkg—100 lb. bags.

BOIL-OFF COMPOUNDS, RAYON

Strictly there is no "boiling off" of rayon since no sericin or gum is present; however, some rayon is not delivered by the manufacturer to the dyer in the bleached state, and does contain oils used in twisting, winding, sizing, etc., and fats, etc., employed in mfr., so that the yarn must be scoured thoroughly. See Boil-Off Compounds, Textile; Detergents, Textile.

BORNEO CAMPHOR see Borneol

BORNEOL (Borneo Camphor, Bornyl Alcohol Baras Camphor, Malayan Camphor, Sumatra Camphor, Dihydroxy-camphene, Camphanol)

$C_{10}H_{17}OH$. M.W. 154.14. White, solid, amorp. and crystalline, camphor-like odor. Sp. gr. 1.011 (15°C) M.P. 208.6°C. B.P. 213.5°C. Sol. alcohol, ether; very sl. sol. water. Uses—mfr. perfumes, pharmaceuticals intermediates, celluloid, organic chemicals, synth. camphor, borneolesters; in medicine. Grades—tech.; pure.

*Bios Labs, 17 W 60 St, N Y 23
Fritzsche Bros, 76 9 Ave, N Y 11
*Variacold Chem Co, 116 Broad St, N Y 4

BOROFORM see Acetylene Tetrachloride

BORON, AMORPHOUS

B; At. Wt. 1082; at No. 5; vol. 3; soft, brown powd. ignites in air. Sp. gr. 2.45. M.P. 2300°C. Unaffected by water, chlorine or bromine at ordinary temp. Sl sol. in water when freshly prepared and not strongly ignited. Uses—as positive pole in galvanic elements thermometers.

●Pkg—Custom packed.

BUFFING COMPOUNDS

Compounds applied to the buffs (disks of cloth or similar pliant materials) used in the buffing operation which follows the polishing operation on metals. Buffing usually is classified in two ways "cutting down" and "coloring." For the first, specially processed tripoli or emery and tallow are commonly employed, and for "coloring" aluminum oxide or chromium oxide compounds are popular. Other preps. are specially compounded with tripoli and chromium oxide, with pumice, emery and a machine oil, with soap-bark powder and water, with pumice and a grease-removing solvent; others contain lime.

Eastman

n-butyl acetate

Rigid quality control assures the consistently high quality of Eastman n-butyl acetate. It is one of the most widely used medium-evaporating solvents for lacquers and is also employed as an extracting solvent in the artificial leather, perfume, flavoring and other industries.

Sales offices in principal cities; see ad Catalog Section.

n-BUTYLAMINE

$CH_3CH_2CH_2CH_2NH_2$. Sp. gr. at 20/20°C, 0.7385. B.P. 77.01°C; completely miscible with water; lb. per gal. at 20°C, 6.15. Has a characteristic ammoniacal odor, and with fatty acids forms soaps which show unusually high degree of solubility in hydrocarbons. It combines readily with acids, aldehydes, olefin oxides, chlorhydrins, and organic sulfur compounds, and is useful intermediate in making emulsifying agents, dyestuffs, rubber chemicals, flotation agents, corrosion inhibitors, and insecticides.

●Pkg—1 gal. cans, 5, 55 gal. drums.

Bios Labs, 17 W 60 St, N Y 23
*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17

Eastman Chem Products, Kingsport, Tenn

n-BUTYLBENZENE

*Phillips Petroleum Co, Special Products Div, Bartlesville, Okla

sec.-BUTYL BENZENE

$C_6H_5C_4H_9$. M.W. 134.60. Clear liq. B.P. 172.5° C. Uses—in nitration, oxidation, halogenation, hydrogenation, sulfonation, and dehydrogenation; in synthesis of dyestuffs and fine chemicals.

●Pkg—Pint, quart, gal. bottles.

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Matheson Coleman & Bell, 4101 Montgomery Rd, Norwood (Cincinnati), Ohio
*Phillips Petroleum Co, Special Products Div, Bartlesville, Okla

tert.-BUTYL BENZENE

$C_6H_5C(CH_3)_3$. Colorless liq. M.P. —58°C. B.P. 168°C. Insol. water; sol. alcohol, ether.

●Pkg—Pint, quart bottles.

J M Baird Co, 254 W 31 St, N Y 1
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Phillips Petroleum Co, Special Products Div, Bartlesville, Okla

BUTYL BENZOATE

$C_6H_5C_7H_{13}O_2$. M.W. 178.11. Colorless liq. Sp. gr. 1.002 (15°C). B.P. 250.3°C. Sol. alcohol, ether; insol. water. Uses—mfr. synth. perfumes; solvent; plasticizer. Grades—tech.

●Pkg—Cans, drums.

*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
P R Dreyer, 113 W 19 St, N Y

BUTYL BENZYL PHTHALATE

●Pkg—5, 55 gal. drums.

*Monsanto Chem Co, Organic Chem Div, 800 N 12 Blvd, St Louis 1, Mo
*Morton-Withers Chem Co, 2110 High Point Rd, Greensboro, N C

BUTYL BENZYL SEBACATE

$H_7C_7OOC(CH_2)_8COOC_4H_9$. M.W. 348. Light straw colored liq. Uses—plasticizers for vinyl resins and synth. rubbers.

J M Baird Co, 254 W 31 St, N Y 1
Binney & Smith Co, 41 E 42 St, N Y 17
*Morton-Withers Chem Co, 2110 High Point Rd, Greensboro, N C

BUTYL BORATE (Tributyl Borate)

$(C_4H_9)_3BO_3$. M.W. 230.16. Hydrolyzes with water. Sol. organic liq. B.P. 232.4°C., M.P. —70°C. Uses—drying agent; flameproofing; mfr. specialty lacquers, inks.

●Pkg—1 gal. cans, 5, 55 gal. drums.

*Anderson Labs, Weston, Mich
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

n-BUTYL BROMIDE (Bromobutane)

$CH_3(CH_2)_3Br$. Colorless liq. Sp. gr. 1.275. B.P 101.6°C. Insol. water; sol. alcohol, ether. Uses—mfr organic chemicals; pharmaceuticals. Grades—pure; tech.

●Pkg—5, 13 gal. carboys, 5, 10, 55 gal. drums.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Dow Chem Co, Midland, Mich
*Edcan Labs, 10-20 Pine St, S Norwalk, Conn
*Fine Organics, 211 E 19 St, N Y 3
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
Philip J Lo Bue Co, 277 Park Ave, N Y 17

sec.-BUTYL BROMIDE (2-Bromobutane)

$CH_3CH_2CHBrCH_3$. M.W. 137. Clear, odorless liq Uses—in organic syntheses, particularly as source of sec butyl radical.

●Pkg—5, 10, 55 gal. drums.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Edward S Burke, 65 Pine St, N Y 5
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Dow Chem Co, Midland, Mich
*Edcan Labs, 10-20 Pine St, S Norwalk, Conn
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

tert.-BUTYL BROMIDE (2-Bromo-2-Methylpropane, 2-Bromoisobutane)

$(CH_3)_3CBr$. M.W. 136.99. Colorless liq. B.P. 72° At 210° changes to isobutyl bromide. M.P. —20°. Insol water; miscible organic solvents.

●Pkg—1 gal. cans, 5, 10 gal. carboys.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Dow Chem Co, Midland, Mich
*Edcan Labs, 10-20 Pine St, S Norwalk, Conn
Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y
*Toelle Chem Co, R D 1, Box 75, Newton, N J

BUTYL BROMIDE ISO (1-Bromo-isobutane) (1-Bromo-2-Methyl-propane)

Colorless, oily liq. B.P. 90°C. Insol. water; miscible alcohol, ether.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Edcan Labs, 10-20 Pine St, S Norwalk, Conn
*Michigan Chem Corp, 500 N Bankson, St Louis, Mich

BUTYL BUTYRATE (Isobutyl Isobutyrate)

$(CH_3)_2CH.COO.CH_2.CH(CH_3)_2$. Colorless, neutral liq. Sp. gr. 0.858 (15°C). B.P. 156.9°C. Sol. alcohol, ether; insol. water. Uses—solvent for nitrocellulose lacquers. Grades—tech.

J M Baird Co, 254 W 31 St, N Y 1
*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
P R Dreyer, 113 W 19 St, N Y
Florasynth Labs, 900 Van Nest Ave, Bronx, N Y
*Fritzsche Bros, 76 9 Ave, N Y 11
*Polak's Frutal Works, Middletown, N Y
*Verona Chem Co, 26 Verona Ave, Newark 4, N J

BUTYL CARBITOL see Ether, Diethylene Glycol Monobutyl

p-tert-BUTYL CATECHOL

$(CH_3)_3C.C_6H_3(OH)_2$. Colorless cryst. M.P. 56°C. B.P. 285°C.

●Pkg—8½, 10, 90 lb. tins.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Dow Chem Co, Midland, Mich

BUTYL CELLOSOLVE see Ether, Ethylene Glycol Monobutyl

BUTYL "CELLOSOLVE*" STEARATE

(*Reg. Trade-Mark—Carbide & Carbon Chemicals Corp.) $C_{17}H_{33}COOC_4H_4OC_4H_9$. M.W. 384. Sol. alcohols, ketones, esters, aromatic and aliphatic hydrocarbons, fats, oils and waxes; insol. water. Uses—plasticizer for vinyl resins, cellulose esters and synth. rubber; lubricant for textiles and leather.

SECONDARY BUTYL ACETATE

Clear, colorless liquid belonging to medium boiling group of solvents. Dissolves many synthetic and natural resins and asphalt. Miscible with vegetable oils. Used in lacquers, films and plastic products.

Write or phone for further information.

BUTYLOXIDE see Ether, n-Butyl

tert-BUTYL PERBENZOATE

$C_6H_5CO(O_2)C(CH_3)_3$. M.W. 194.22. Sl. straw-colored liq. Sol. common organic solvents. Uses—bleaching, pharmaceutical application, high temp. polymer catalyst.
● Pkg—1, 8 lb. bottles, 5 gal. carboys

*Lucidol Div, 1740 Military Rd, Buffalo 5, N Y

p-sec-BUTYL PHENOL (4-sec-Butylphenol)

$C_{10}H_{14}O$. M.W. 150.2. White to sl. yellow crystalline solid with strong odor. B.P. 100 mm. Hg., 170°C.; B.P. 10 mm. Hg., 114°C.; Sp. gr. 60/25°C., 0.953; F.P. 50°C. Uses—fungicide; also intermediate in the mfr. of synth. resins.

*Dow Chem Co, Midland, Mich

p-tert-BUTYL PHENOL

$C_{10}H_{14}O$. M.W. 150. White col., aromatic odor. F.P. 97-98°C. Insol. water. Uses—mfr. synth resins for paints and varnishes; mfr. certain resinous products.
● Pkg—100 lb. bags.

Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Dow Chem Co, Midland, Mich

BUTYL PHOSPHATE

$(C_4H_9)_3PO_4$. Colorless, liq., mild pleasant odor. Miscible lacquer solvent. Sp. gr. 0.985. B.P. 255-260°C. F.P. 170°C. Uses—mfr. nitrocellulose plastics having low temp. flexibility; insulating impregnator for paper. Grades—tech.

*Commercial Solvents Corp, 260 Madison Ave, N Y 16
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*Victor Chem Works, 141 W Jackson Blvd, Chicago 4, Ill

BUTYL PROPIONATE

$C_2H_5CO_2C_4H_9$. M.W. 130.11. Colorless liq. Sp. gr. 0.875 (20°C). Flash point 105°F. B.P. 145.4°C. Insol. water. Miscible with alcohol, ether. Shipping Wt. per gal. 7.28 lbs. Uses—mfr. lacquers, synth. perfumes, etc., solvent for nitrocellulose. Grades—tech.
● Pkg—custom packed

*Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Florasynth Labs, 900 Van Nest Ave, Bronx, N Y
*Jasonols Chem Corp, 1085 Myrtle Ave, Bklyn 6, N Y

n-BUTYL RICINOLEATE

$C_6H_{13}CHOH{-}CH_2CH{=}CH(CH_2)_7COOC_4H_9$. M.W. 354. Clear, light straw-colored liq.; low viscosity. Uses—lubricant additive; plasticizer.
● Pkg—5 gal. cans, 55 gal. drums.

*Baker Castor Oil Co, 120 Broadway, N Y 5
*Deecy Products Co, 120 Potter St, Cambridge 42, Mass
*Kessler Chem Co, State Rd & Cottman Ave, Phila 35, Pa
*Mathe Chem Co, 169 Millbank St, Lodi, N J
*Robinson, Wagner Co, 110 E 42 St, N Y 17

n-BUTYL STEARATE

$C_{17}H_{35}CO_2C_4H_9$. Colorless liq. Sol. alcohol, ether.
● Pkg—1 gal. cans, 5, 54 gal. drums.

W W Angus, 220 Broadway, N Y 38

1,3-BUTYLENE GLYCOL

● Pkg—55 gal. drums.

*Celanese Corp of America, 180 Madison Ave, N Y 16
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Washine-National-Sands, 37-02 Northern Blvd, L I C 1, N Y

2-3 BUTYLENE GLYCOL (Butanediol)

CH_3-CHOH-CHOH-CH_3. M.W. 90.08. Nearly colorless sol. or liq., hygroscopic. Sp. gr. 1.000 (25°C). B.P. 184°C. M.P. 24°C.-27°C. Miscible with water in all proportion. Refractive Index 1.438 (20°C). Uses—solvent for dyes, has good penetration into wood and textiles, is resistant against alkali, non-resistant against most mineral acids. Forms nitrates with nitric. Forms resins with phthalic anhydride. Grades—99% 2-3 butylene glycol.
● Pkg—55 gal. drums.

*Celanese Corp of America, 180 Madison Ave, N Y 16
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Washine-National-Sands, 37-02 Northern Blvd, L I C 1, N Y

3-BUTYN-1-OL (beta-Ethynyl Ethanol)

$HC{\equiv}CCH_2CH_2OH$. M.W. 70.09. Colorless liq. characteristic odor. Uses—organic syntheses, pharmaceuticals, plastics.
● Pkg—custom packed.

*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio

3-BUTYN-2-OL (Methyl Ethynyl Carbinol)

$HC{\equiv}C{:}C(OH)CH_3$. M.W. 70.1. Colorless liq.; characteristic odor. Uses—organic synthesis, pharmaceuticals, plastics.
● Pkg—custom packed.

*Algo Chem Co, 1027 Deacon St, Detroit 17, Mich
*Farchan Research Labs, 609 E 127 St, Cleveland 8, Ohio

1-BUTYNE see Ethyl Acetylene

n-BUTYRALDEHYDE

C_4H_8O. M.W. 72.10. Colorless liq. B.P. 75.7°C. Sl. sol. in water; very sol. in organic solvents.
● Pkg—1 gal. cans, 5, 55 gal. drums.

*Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Eastman Chem Products, Kingsport, Tenn
Matheson Coleman & Bell, 4101 Montgomery Rd, Norwood (Cincinnati), Ohio
*United States Industrial Chem Co Div, 120 Broadway, N Y 5

BUTYRIC ANHYDRIDE

$(C_3H_7CO)_2O$. Liq. B.P. 198.2°C. Sp. gr. .9676 at 20°C. Uses—organic synthesis.
● Pkg—1 gal. cans, 5, 55 gal. drums.

Carbide & Carbon Chem Co Div, 30 E 42 St, N Y 17
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
Eastman Chem Products, Kingsport, Tenn
Matheson Coleman & Bell, 4101 Montgomery Rd, Norwood (Cincinnati), Ohio

BUTYROLACTONE

● Pkg—55 gal drums.

Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y
Cliffs Dow Chem Co, Wright St, Marquette, Mich.
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y

CADMIUM ACETATE

$Cd(CH_3COO)_2{+}2H_2O$. Colorless cryst. sl. odor acetic acid. Sp. gr. 2.01. Sol. alcohol, ether. Uses—mfr. acetates; assistant dyeing and printing textiles; dentistry; laboratory reagent.
● Pkg—custom packed.

Aceto Chem Co, 40-40 Lawrence St, Flushing 54, L I, N Y
American Firstoline Corp, 420 Lexington Ave, N Y 17
*J T Baker Chem Co, Phillipsburg, N J
*General Chem Div, 40 Rector St, N Y 6
*Mallinckrodt Chem Works, 2 & Mallinckrodt Sts, St Louis 7, Mo

CADMIUM BROMIDE

$CdBr_2$. White to yellowish efflorescent needle cryst. Sp. gr. 5.192 (dry). M.P. 568°C. B.P. 963°C. Sol. water, sl. sol. alcohol, ether. Uses—in photographic emulsions; process engraving; lithography. Grades—tech.; C.P.
● Pkg—2 x 50 lb. jars/cases.

*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y
*Dow Chem Co, Midland, Mich
*Mallinckrodt Chem Works, 2 & Mallinckrodt Sts, St Louis 7, Mo
*Merck & Co, Rahway, N J

CADMIUM CARBONATE

$CdCO_3$. M.W. 172.4. Sp. gr. 4.25. White, rhombic cryst. or amorp. powd. Decomp. on heating. Insol. water; sol. acids or ammonium salt solutions.
● Pkg—100 lb. drums, 350 lb. bbls.

American Firstoline Corp, 420 Lexington Ave, N Y 17
*J T Baker Chem Co, Phillipsburg, N J
*General Chem Div, 40 Rector St, N Y 6

CALCIUM CHLORIDE

Dowflake® calcium chloride 77-80%
Peladow® calcium chloride 94-97%
(New high-test anhydrous pellets)

DOW PRODUCES MORE THAN 600 CHEMICAL PRODUCTS.

THE DOW CHEMICAL COMPANY
MIDLAND • MICHIGAN

DOW

CALCIUM CHLORIDE

Flake, 77-80%, meeting A.S.T.M. specifications
Liquor • Solid • Anhydrous • Broken Solid

Wyandotte
REG. U. S. PAT. OFF.

WYANDOTTE CHEMICALS CORPORATION
WYANDOTTE, MICHIGAN • OFFICES IN PRINCIPAL CITIES

Soda Ash • Caustic Soda • Bicarbonate of Soda • Calcium Chloride
Calcium Carbonate • Chlorine • Hydrogen • Dry Ice • Synthetic Detergents • Glycols • Carbose (Sodium CMC) • Ethylene Dichloride • Propylene Dichloride • Aromatic Sulfonic Acid Derivatives
DDT • BHC Other Organic and Inorganic Chemicals

COLUMBIA-SOUTHERN ESSENTIAL INDUSTRIAL CHEMICALS

CALCIUM CHLORIDE

Soda Ash • Caustic Soda • Sodium Bicarbonate • Liquid Chlorine
Calcium Chloride • Silene EF • Hi-Sil • Calcene TM • Calcene NC
Soda Briquettes • Modified Sodas • Caustic Potash • Pittchlor
Caustic Ash • Phosflake • Pacific Crystals • Perchlorethylene
Chlorinated Benzenes • Muriatic Acid • Benzene Hexachloride

COLUMBIA-SOUTHERN CHEMICAL CORPORATION
SUBSIDIARY OF PITTSBURGH PLATE GLASS COMPANY
420 FORT DUQUESNE BOULEVARD, PITTSBURGH 22, PA

DISTRICT OFFICES: BOSTON • CHARLOTTE • CHICAGO • CINCINNATI
CLEVELAND • DALLAS • HOUSTON • MINNEAPOLIS • NEW ORLEANS
NEW YORK • PHILADELPHIA • PITTSBURGH • ST. LOUIS • SAN FRANCISCO

*Company classifies itself as manufacturer or producer of this product

CALCIUM MAGNESIUM CHLORIDE (Magnesium Calcium Chloride)

$CaCl_2MgCl_2$. White, deliq. crystalline solid. Sol. water, acids. Uses—mfr. intermediates, synth. dyes, organic chemicals, artificial mineral waters, dry colors, fireproof paints, ammonium chloride, paper size; dehydrating agent in chemical processes; preserving and fireproofing wood; sizing and finishing textiles; freezing mixtures; as preservative; dehydrating starch; laboratory reagent. Grades—tech.

●Pkg—Bulk.

J M Baird Co, 254 W 31 St, N Y 1
*Dow Chem Co, Midland, Mich
*Michigan Chem Corp, 500 N Bankson, St Louis, Mich.

CALCIUM MANDELATE

$Ca(C_6H_5CHOHCOO)_2$. M.W. 342.19. White crystalline powd. Sl. sol. water, alcohol. Uses—in medicine as urinary antiseptic.

●Pkg—25, 100, 125 lb. drums.

J M Baird Co, 254 W 31 St, N Y 1
*Calco Chem Div, Bound Brook, N J
*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y
Gallard-Schlesinger Chem Co, 37-11 29 St, L I C 1, N Y
*Mallinckrodt Chem Works, 2 & Mallinckrodt Sts, St Louis 7, Mo

CALCIUM, METAL

Ca. White, soft, crystalline metal. Sp. gr. 1.578 (15° C). M.P. 8810°C. Sol. acids. Uses—mfr. intermediates, alloys; dehydrating oils; metallurgical purposes; reducing agent in smelting; decarburization and desulfurization of iron and iron alloys; in place of sodium in chemical reactions.

J T Baker Chem Co, Phillipsburg, N J
Belmont Smelting & Refining Works, 330 Belmont Ave, Bklyn 7, N Y
*Bram Chem Co, 820 65 Ave, Phila 26, Pa
*Electro Metallurgical Co Div, 30 E 42 St, N Y 17

CALCIUM NAPHTHENATE

See Aluminum Naphthenate for uses.

●Pkg—15, 55 gal. drums.

*Advance Solvents & Chem Corp, 245 5 Ave, N Y 16
*Ferro Chem Corp, Box 349, Bedford, Ohio
Harshaw Chem Co, 1945 E 97 St, Cleveland 6, Ohio

CALCIUM TARTRATE

$CaC_4H_4O_6.4H_2O$. M.W. 260.2. White powd. Sl sol. water, alcohol; sol. in dilute HCl or HNO_3.

American Quinine Co, 15 William St, N Y 5
J M Baird Co, 254 W 31 St, N Y 1
*J T Baker Chem Co, Phillipsburg, N J
Kingston Chem Co, 15 William St, N Y 5

CALCIUM THEOBROMINE

$(C_7H_7O_2N_4)_2Ca$. M.W. 374. Uses—medicinal.

*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y

CALCIUM THIOCYANATE

$Ca(SCN)_2.3H_2O$. M.W. 210.28.

●Pkg—25, 50, 140 lb. carboys.

*J T Baker Chem Co, Phillipsburg, N J
*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y

CALCIUM THIOGLYCOLATE

$CaSCH_2COO.3H_2O$. M.W. 184. White powd. Sol. water. Uses—depilatory preparations.

●Pkg—5, 10, 25, 50, 100 lb. containers.

*Argus Chem Lab, 633 Court St, Bklyn 31, N Y
J M Baird Co, 254 W 31 St, N Y 1
*Evans Chemetics, 250 E 43 St, N Y 17

CALCIUM TITANATE

$CaTiO_3$. M.W. 136. Light tan powd. M.P. 3530°F. Sol. HF, dil. acids, hot conc. sulfuric; insol. water, alkalis. Uses—ceramic.

●Pkg—100 lb. drums, bbls.

J M Baird Co, 254 W 31 St, N Y 1
*Titanium Alloy Mfg Div, 111 Broadway, N Y 6

CALCIUM TUNGSTATE (Calcium o-Tungstate, n-Calcium Wolframate)

$CaWO_4$. M.W. 288.08. Sp. gr. 6.06. Shining crystalline scales. Sl. sol. water. Uses—mfr. luminous paints; in photography X-ray pictures; in medicine.

*Bram Chem Co, 820 65 Ave, Phila 26, Pa
Harshaw Chem Co, 1945 E 97 St, Cleveland 6, Ohio
*Metallurg, Inc, 100 Park Ave, N Y 17

*Argus Chem Lab, 633 Court St, Bklyn 31, N Y
*Baker Castor Oil Co, 120 Broadway, N Y 5
*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y

n-CALCIUM WOLFRAMATE see Calcium Tungstate

CALCIUM ZIRCONATE SILICATE

$CaZrSiO_5$. M.W. 239.2. White powd. M.P. 2900°F. Sol. HF, sl. sol. hot conc. sulfuric; insol. water, alkalis. Uses—opacifier to produce closer grained textures particularly in high fired or zinc free low temp. ceramic glazes.

●Pkg—80 lb. bags, 500 lb. drums, bbls.

J M Baird Co, 254 W. 31 St, N Y 1
*Titanium Alloy Mfg Div, 111 Broadway, N Y 6

CALOMEL see Mercurous Chloride

CALX CHLORINATA see Bleaching Powder

CAMBOGIA see Gum, Gamboge

CAMPHANOL see Borneol

CAMPHENE

$C_{10}H_{14}$. M.W. 136. Crystalline solid. M.P. 41°C. Uses—raw material in the synthesis of camphor. L. Sol. organic solvents; insol. water.

●Pkg—583 lb. drums.

*Crosby Chem, P O Box 32, De Ridder, La
Distillation Products Industries, 755 Ridge Rd W, Rochester, N Y
*T C Wilson Co, 503 Market St, San Francisco 5, Cal

CAMPHOR, MONOBROMATED (a-Bromo-Camphor)

$C_{10}H_{15}OBr$. M.W. 231.0°C. White, crystalline powd. with a mild, camphor-like odor. Discolors on long exposure to sunlight. M.P. 76°C. Insol. in water, moderately sol. in alcohol, and very sol. in acetone, chloroform, and benzene. Uses—in medicine, as an antispasmodic and sedative; in mfr. medicinals. Grades—U.S.P. IX.

●Pkg—100 lb. kegs, 25, 100 lb. drums.

Barclay Chem Co, 75 Varick St, N Y 13
*Chemo Puro Mfg Corp, Queens Blvd & N 32 Pl, L I C, N Y

CARBON BLACK (Channel Black, Gas Black, Natural Gas Black, Ebony Black, Jet Black, Hydrocarbon Black)—see also Lamp Black, also Carbon Decolorizing

Practically all carbon (C.). Black, amorp. solid. Sp. gr. 1.723-1.773. M.P. 3500+. Sublimes. Insol. Uses—nfr. printing inks, paint, enamels, varnishes, automobile tires, rubber goods, paper, pyrotechnics, crucible steel, stove and shoe polishes, phonographic records, bookbinder's board, black leathers, electrical insulators, buttons, carbon paper, typewriter ribbons, crayons, carriage cloth, cements, mortars and building stones, celluloid, tarpaulins, drawing stencil and marking inks; rubber pigment; process engraving; case-hardening; absorbing poisonous gases. Grades—as to source, fineness, color.
●Pkg—25, 50 lb. bags.

CASE-HARDENING MATERIALS

Compounds which impart surface hardness to steel through the absorption of carbon during a heating followed by a quenching operation. The basis of case-hardening or carburizing compounds is usually wood charcoal, together with certain so-called "energizers" such as sodium or barium carbonates, cyanides, etc. Many compounds also have oil or other organic binders.

CASEIN, INEDIBLE

White to yellowish amorp. powd. Sp. gr. 1.259. Sol. alkalies, alkaline carbonates, acids. Uses—mfr. casein cold water paints and varnishes, waterproofed paints and distempers, paint removers, water-resistant glues and adhesives, shoe polishes, synth. milk linoleum, pharmaceutical caseinates; mordant in dyeing and printing textiles; printing paste thickener; loading and softening silks and cottons; producing high gloss on fabrics; finishing and dressing leather; substitute for gelatin, albumen, shellac, gums, etc.; for various purposes; in celluloid and other plastics; rubber compounds; hard rubber; soaps; photographic films; printing artist's canvas; insulating compositions; bottle sealing compositions; adhesive thickener in insecticides; filler; binder in cork compositions and other plastics; glazing casks. Graded according to use.
•Pkg—100 lb. bags.

DAVISON
Catalysts

PETROLEUM CATALYSTS

M-S*
Microspheroidal Synthetic Silica-Alumina Petroleum Cracking Catalysts.

DA-1*
Ground Synthetic Silica-Alumina Petroleum Cracking Catalyst.

Atlantic Platinum Reforming Catalyst
Catalysts for the reforming of petroleum naphthas. Primary reactions are the formation of naphthenes and subsequent dehydrogenation to aromatics.

SPECIALTY & CUSTOM CATALYSTS

Catalysts made to specifications for these reactions:
Alkylation • Chlorination • Dehydrogenation
Esterification • Hydrogenation • Oxidation
Polymerization • Others

Typical Catalyst Supports:
Aluminas • Asbestos • Carbon • Kieselguhr
Pumice • Silica Gel

Typical Active Agents:
Aluminum • Bismuth • Chromium • Cobalt
Copper • Magnesium • Manganese • Mercury
Molybdena • Nickel • Palladium • Platinum
Silver • Vanadium

Catalyst made in these forms:
Extruded • Granular • Pelleted • Powdered
Spherical

Davison's Specialty Catalyst Plant is designed for flexibility and versatility in order to meet any given catalyst manufacturing problem. This plant is staffed by technically trained men experienced in the "know-how" of the manufacturing of catalysts. Each catalyst problem is handled separately and *confidentially*.

*T.M. Reg. U. S. Pat. Off.

CEMENTS, BRISTLE SETTING

Cements, usually formulated with synth. resins or rubber, used for setting bristles in brushes to provide a tenacious bond. They should have great durability and excellent resistance to benzene, oils, water and most paint and lacquer thinners. The viscosity of the bristle setting cement should be worked out experimentally in the brushmaker's plant.

*Morningstar, Nicol, 630 W 51 St, N Y 19
*Paisley Products, 1770 Canalport Ave, Chicago 16, Ill
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Varnitон Co, 416 N Varney St, Burbank, Cal
*George D Wetherill Varnish Co, Haddon Ave & White Horse Pike, Camden 3, N J

CEMENTS, ELECTRICAL RESISTING

Pastes or powds. which harden into porcelain or porcelain-type materials, insulate electricity, radiate heat, are resistant to most acids, alkalies, to oil and high temperatures. Replace insulating varnish and enamel, mica, asbestos, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*Atlas Mineral Products Co, Norman St, Mertztown, Pa
*Bakelite Co, 30 E 42 St, N Y 17
*Borden Co, Chem Div, 350 Madison Ave, N Y 17
*Cycleweld Cement Products Plant Div, Box 775, Trenton, Mich
Edward R Dornoff Co, 5711 W Chicago Ave, Chicago 51, Ill
*L W Ferdinand & Co, 18 Mica Lane, Newton Lower Falls, Mass
*General Elec, Chem Div, Pittsfield, Mass
*H V Hardman Co, 571 Cortlandt St, Belleville 9, N J
*Irvington Varnish & Insulator Co, 6 Argyle Terrace, Irvington 11, N J
*Lox Mfg Co, 3310 E 31 St, Kansas City 3, Mo
*Mitchell Rand Mfg Corp, 51 Murray St, N Y 7
*Nukem Products Corp, 111 Colgate Ave, Buffalo 20, N Y
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa
*Zophar Mills, 103 26 St, Bklyn 32, N Y

CEMENTS, ENGRAVERS

Preparations used by engravers to mount halftones, zinc plates, etc., to the wooden block. Employed particularly where no shoulders are used that would permit other methods of fastening.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*American Products Mfg Co, 8127 33 Oleander St, New Orleans 18, La
*Angier Products, 120 Potter St, Cambridge 42, Mass
*Cycleweld Cement Products Plant Div, Box 775, Trenton, Mich
*H Gartenberg & Co, 412 W Pershing Rd, Chicago 9, Ill
*Lox Mfg Co, 3310 E 31 St, Kansas City 3, Mo
*Naugatuck Chem Div, Elm St, Naugatuck, Conn
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Shields Buying Service, 15 Moore St, N Y 4
*Zophar Mills, 103 26 St, Bklyn 32, N Y

CEMENTS, FABRIC, CANVAS

Preparations of various ingredients used to join fabrics together in a permanent bond. Should not be seriously affected by oil, water, steam, etc., and remain indefinitely in an elastic state and not crack, chip or crumble.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
American Firstoline Corp, 420 Lexington Ave, N Y 17
*American Resinous Chem Corp, 103 Foster St, Peabody, Mass
*Angier Products, 120 Potter St, Cambridge 42, Mass
*Arabol Mfg Co, 110 E 42 St, N Y 17
*Armstrong Cork Co, Lancaster, Pa
*Cycleweld Cement Products Plant Div, Box 775, Trenton, Mich
*Dewey & Almy Chem Co, 62 Whittemore Ave, Cambridge 40, Mass
Edward R Dornoff Co, 5711 W Chicago Ave, Chicago 51, Ill
*L W Ferdinand & Co, 18 Mica Lane, Newton Lower Falls, Mass
*Benjamin Foster Co, 4635-37 W Girard Ave, Phila 31, Pa
*Hayes Adhesives Co, Union Blvd at Brown Ave, St Louis 15, Mo
*Lox Mfg Co, 3310 E 31 St, Kansas City 3, Mo
*Montgomery Bros, Penrose & Packer Aves, Phila 45, Pa

*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 12, Ohio
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, FILLERS

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*Benjamin Foster Co, 4635-37 W Girard Ave, Phila 31, Pa
*J M Huber Corp, 100 Park Ave, N Y 17
*L Sonneborn Sons, 300 4 Ave, N Y 10

CEMENTS, FILM, PHOTOGRAPHIC

Specialized preparations used to join and repair moving picture film. Newer type cements have a solvent effect on the film providing a more permanent bond. See also Cements, Celluloid.

*American Products Mfg Co, 8127-33 Oleander St, New Orleans 18, La
*Angier Products, 120 Potter St, Cambridge 42, Mass
*Armstrong Cork Co, Lancaster, Pa
*Bell Chem Co, 25 W 44 St, N Y 36
*Lacquer Specialties, 249 Ave P, Newark 5, N J
*Linick Chem Co, 59 E Madison St, Chicago 3, Ill
*Lox Mfg Co, 3310 E 31 St, Kansas City 3, Mo
*Naugatuck Chem Div, Elm St, Naugatuck, Conn
*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 12, Ohio
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Rosco Labs, 367 Hudson Ave, Bklyn 1, N Y
*Shuman Chem Products, Industrial Village, 20 Factory St, Cedar Grove, N J
*Varnitон Co, 416 N Varney St, Burbank, Cal

CEMENTS, FOUNDRY

Adhesives used in foundry practice to bind parts together. See also Cements, Refractory; Cements, High Temperature.

*Armstrong Cork Co, Lancaster, Pa
*Foundry Services, 280 Madison Ave, N Y 16
*International Minerals & Chem Corp, 20 N Wacker Dr, Chicago 6, Ill
*Ironton Fire Brick Co, Ironton, Ohio
*Polymer Chem Co, 5920 Carthage Ave, Cincinnati 12, Ohio
*Robinson Clay Products Co, P O Box 1070-X10, 65 W State St, Akron 9, Ohio
*Frederic B Stevens, 1800 18 St, Detroit 16, Mich

CEMENTS, FURNACE

Preparations for setting-up and repairing joints in furnaces, ranges, heaters, and stoves, and for stopping holes in flues and draft pipes. Should be free from gritty particles, work smoothly, and adhere firmly to metal castings, etc.

*Armstrong Co, 241 S Post St, Detroit 17, Mich
*Armstrong Cork Co, Lancaster, Pa
*Botfield Refractories Co, Swanson & Clymer Sts, Phila 47, Pa
*Benjamin Foster Co, 4635-37 W Girard Ave, Phila 31, Pa
*Ironton Fire Brick Co, Ironton, Ohio
*Robinson Clay Products Co, P O Box 1070-X10, 65 W State St, Akron 9, Ohio
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, GASKET

Preparations used either with or without a gasket to seal metal parts together, particularly the heads of automobile, stationary engines, etc. Must fill the fine pores, imperfections, or unevenness of the parts joined, making the joints permanently tight, and seal effectively against leakage of water, gas, oil, air, steam, and be impervious to acids and alkali.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*American Polymer Corp, 103 Foster St, Peabody, Mass
*Armstrong Cork Co, Lancaster, Pa
*Bell Co, 411 N Wolcott, Chicago 22, Ill
*Bell Chem Co, 25 W 44 St, N Y 36
*Cycleweld Cement Products Plant Div, Box 775, Trenton, Mich

*Company classifies itself as manufacturer or producer of this product
Looking for additional information: See Catalog Section

CEMENTS, GASKET, continued

*L W Ferdinand & Co, 18 Mica Lane, Newton Lower Falls, Mass
*Flamort Chem Co, 746 Natoma St, San Francisco 3, Cal
*R M Hollingshead Corp, 840 Cooper St, Camden, N J
*J Landau Co, 221 Wooster St, N Y 12
*National Casein Co, 601 W 80 St, Chicago 20, Ill

*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, GLAZING

Adhesives used to fill scratches and imperfections and to give strong adhesion to parts mended together.

*Benjamin Foster Co, 4635-37 W Girard Ave, Phila 31, Pa
*H Gartenberg & Co, 412 W Pershing Rd, Chicago 9, Ill
*J Landau Co, 221 Wooster St, N Y 12
*L Sonneborn Sons, 300 4 Ave, N Y 10
*William M Steih & Co, 20 Vesey St, N Y 7
*Sullivan Co, 212 E Trigg Ave, Memphis, Tenn

CEMENTS, GRAPHITE

Adhesives formulated with graphite, often in the colloidal form. Uses—on gaskets, etc.

*National Carbon Co Div, 30 E 42 St, N Y 17
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, INSULATING

Products formulated from mineral wool base, expanded vermiculite base, asbestos fibre and binder, or other materials and used principally for insulation purposes on irregular surfaces where it would be impracticable to apply sectional insulation, sheets or blocks. Used extensively by the steam-fitting and plumbing trade for insulation and finishing heating boilers and pipe fittings, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*American Resinous Chem Corp, 103 Foster St, Peabody, Mass
*Armstrong Cork Co, Lancaster, Pa
*Botfield Refractories Co, Swanson & Clymer Sts, Phila 47, Pa

*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa
*Titanium Alloy Mfg Div, 111 Broadway, N Y 6
*Zophar Mills, 103 26 St, Bklyn 32, N Y

CEMENTS, LABORATORY

General utility products finding wide application in laboratories for mending and repairing glass to glass, glass to metal, rubber to metal or glass, porcelain ware, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*Cycleweld Cement Products Plant Div, Box 775, Trenton, Mich
*Zophar Mills, 103 26 St, Bklyn 32, N Y

CEMENTS, LAMP BASING

Cements used to set electric light bulbs in their bases. Cements of this type are also employed for basing radio and other electronic tubes.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*Bakelite Co, 30 E 42 St, N Y 17
*Borden Co, Chem Div, 350 Madison Ave, N Y 17
*Catalin Corp of America, 1 Park Ave, N Y 16
*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y

CEMENTS, LINOLEUM

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*American Polymer Corp, 103 Foster St, Peabody, Mass
*American Products Mfg Co, 8127 33 Oleander St, New Orleans 18, La

*Polymer Industries, 11-08 30 Ave, Astoria, L I, N Y
*Sullivan Co, 212 E Trigg Ave, Memphis, Tenn

CEMENTS, MAGNESIUM OXIDE

*Dow Chem Co, Midland, Mich
*Flamort Chem Co, 746 Natoma St, San Francisco 3, Cal
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, OIL-PROOF

Adhesives with the property of sustained resistance to action of oil, gasoline, gasoline and oil fumes, etc., and finding such representative uses as cement for gaskets used in hosing, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60
*American Polymer Corp, 103 Foster St, Peabody, Mass
*Angier Products, 120 Potter St, Cambridge 42, Mass

*Union Paste Co, 1605 Hyde Park Ave, Hyde Park 36, Mass
*Varniton Co, 416 N Varney St, Burbank, Cal

CEMENTS, REFRACTORY

Preparations which assume a cold air set of extreme hardness at atmospheric temperatures, or may be baked. Uses—in making electric heating elements, coating resistors; on brick and concrete surfaces as a slurry; as a refractory coating, filling the pores, crevices and irregular surfaces; for lining furnaces.

*Aluminum Co of America, 1501 Alcoa Bldg, Pittsburgh 19, Pa
*Armstrong Cork Co, Lancaster, Pa
*Botfield Refractories Co, Swanson & Clymer Sts, Phila 47, Pa
*Foundry Services, 280 Madison Ave, N Y 16

*Zophar Mills, 103 26 St, Bklyn 32, N Y

*Company classifies itself as manufacturer or producer of this product
Looking for nearest branch office: See Catalog Section

CEMENTS, RUBBER

1. As binders until sewing or clamping is accomplished; 2. As permanent bonds; 3. As vulcanized seals. Rubber cements are used in shoe-mfr., by automotive manufacturers for assembling upholstery, as sound deadeners, in the mfr. of pocket-books, impregnation of paper and wood fiber, for repairing tires and tubes, in balloon cements, in fastening linings to insides of tank cars, in securing rubber insulators to metal supports, etc. Laxtex cements are employed in fabricating carpets, for making mohair fabrics, for fastening the long hairs in haircloth used in lapels of coats, for the rubber setting of brushes; and for binding purposes in brake-lining compounds.

*Rubba, Inc, 1015 E 173 St, N Y 60

CEMENTS, SULFUR

Preparations with a sulfur base, combined with other ingredients and used generally as a joint compound; melt and pour easily, possesses high tensile and compression strength, resist acids, water, oil, and show good adhesion to metal, brick, tile, etc. Uses—for caulking joints on cast iron, assembling porcelain insulators, sealing bolts, screws in electrical appliances and equipment, in acid-proof construction, etc.

*Atlas Mineral Products Co, 121 Norman St, Mertztown, Pa
*Maurice A Knight, P O Box 111, Akron 6, Ohio
*Nukem Products Corp, 111 Colgate Ave, Buffalo 20, N Y
*Sauereisen Cements Co, 1045 N Canal St, Pittsburgh 15, Pa

CEMENTS, TRANSPARENT

Specialized adhesives that give a transparent, non-staining, binding and protective coating for such products as cement, brick, wood, plaster, metals, fabrics, china, paper, etc.

*Adhesive Products Corp, 1660 Boone Ave, N Y 60

CHALK PRECIPITATED see Calcium Carbonate

CHANNEL BLACK see Carbon Black

CHARCOAL (Wood Charcoal, Vegetable Charcoal—see also Bone Black)

Black, amorp. solid. Sp. gr. 1.75-2.10. Sublimes at 3600°C. Insol. all common solvents, acids, alkalies. Uses—mfr. calcium carbide, charcoal iron, military gas masks, arc light electrodes, crayons, heating insulating compositions, paint colors, candle wicks; pigment colors, paints, glass, black powd., nitroglycerin and nitrocellulose explosives; chemical catalyst; general decolorizing and filtering medium in chemical processes; precipitant in chemical processes; volatile solvent absorbent; gas absorbent in cold storage, absorbent gas, casing-head gasoline and perfume products; decolorizing and deodorizing fats and oils; purifying water and deodorizing sewage; deodorant in breweries; case-hardening steel; fuel in forges; soil disinfectant; laboratory reagent; in refining alcohol and sugar; horticulture; poultry farming. Grades—Wood (willow, oak, pine, etc.) sticks; lump; powdered; tech.; U.S.P.; animal (bone black); powdered.
● Pkg—5, 10, 20, 50, 100 lb. bags.

CHARCOAL, ACTIVATED

Form of carbon having a high adsorptive capacity for foreign molecules. Extent of adsorptive power depends upon size of capillaries of the charcoal and the size and chemical properties of the molecules to be adsorbed. Den.—when free from impurities is about 2.1. Chemical composition varies with source, may range from 10%-98% carbon. Uses—air purification by removal of gases; decolorizing; catalysts; gas-mask-canister filling; production

*Company classifies itself as manufacturer or producer of this product

CHEMICALS, ANALYTICAL

Chemicals of high degree of purity used in research and control laboratories and usually sold under the following descriptive terms: Reagent, A.C.S., and Reagent grades denoting highest grade available, the former assuring conformity with American Chemical Society Standards, the latter generally applying to chemicals for which the A.C.S. has not made specifications and indicates a comparable grade of purity; C.P. suitable for routine work in industrial and educational institutions, conforming to analysis on label: U.S.P. and N.F. grades indicating conformity to the requirements of the United States Pharmacopoeia selection of chemicals physically clean and fairly chemical or the National Formulary: Pure grade. Indicates care and cally pure. See also under specific chemicals.

FLORISIL

For Chromatography

A high-purity synthetic adsorbent having superior properties for adsorption fractionation of complex organic compounds. This hard, porous, white, granular compound, produced in a wide variety of meshes, is readily adaptable for chromatographic analysis techniques. Florisil offers new possibilities in pharmaceutical, vitamin, antibiotic and chemical research and manufacture. A special bulletin now available.

FLORIDIN COMPANY

DEPT. L, 220 LIBERTY ST.

WARREN, PA.

NOW! FROM 1 SOURCE . . . ALL YOUR LABORATORY CHEMICALS

With the recent consolidation of the organic division of The Matheson Company and The Coleman and Bell Company, now, for the first time, one company supplies AND GUARANTEES a complete line of 3911 reagent inorganic and organic chemicals, biological stains, solutions and chemical indicators.

Our new 8½" x 11" catalog of over 100 pages will show you that every one of the chemicals in this complete list has been tested by one of our analytical chemists. Where ACS has set up specifications, these are met and all of the more widely used chemicals have either an ACS analysis or minimum specification analysis on the label. A technical grade may have been checked only as to identify, while a Reagent Grade with an analysis may have been subjected to fifteen different tests . . . BUT EACH IS

GUARANTEED TO MEET THE SPECIFICATIONS LISTED IN THE CATALOG! All of the biological stains in common use have been tested and passed by the Biological Stain Commission.

We have these chemicals in stock, for prompt delivery, at our East Rutherford and Norwood plants. Matheson, Coleman & Bell chemicals are available either through your laboratory supply dealer or from the East Rutherford or Norwood offices.

We shall welcome your request for a copy of this new catalog . . .

The Complete List of REAGENT INORGANIC AND ORGANIC CHEMICALS, STAINS, SOLUTIONS

Matheson, Coleman & Bell products are distributed by Laboratory Supply Houses throughout the world.

Want to get rid of your "nasties"?

If you've a tough problem in chemical production or development, we may be able to relieve the burden on your facilities and save you time and money.

6-way chemical service

1. Less-than-carload production of fine chemicals.
2. Research laboratory assistance, with full protection of your patents.
3. Assistance in marketing your chemical product.
4. Large-scale production of your product, if not suited to your own facilities.
5. Contract packaging of consumer end products.
6. Process development assistance.

Quality Fine Chemicals

Contract Manufacturing for the Chemical Processing Industries

Ringwood Chemical Corporation, formerly The Edwal Laboratories, Inc. offers facilities for the confidential manufacture of commercial quantities of fine chemicals and formulations on contract.

An experienced staff of chemists and chemical engineers supervises all phases of this work . . . from research through production for the market in bulk or packaged under your private label.

Contract arrangements are flexible and are carried out in accordance with your needs. All work is confidentially handled and patent rights protected.

Use Ringwood facilities for those chemical manufacturing and formulating problems for which you are not staffed or equipped.

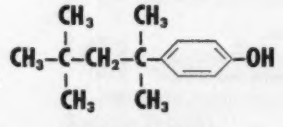
PURE REAGENT CHEMICALS

Matheson, Coleman & Bell Reagent Chemicals include practically all the items used in research and analytical work. The Reagent Inorganic Chemicals carry upon the label a statement showing the maximum limits of impurities allowed. The Reagent Organic Chemicals are manufactured to pass the specifications shown in our price list.

Complete stocks of MC&B items are carried at our East Rutherford and Norwood Plants.



Our new catalog listing 3911 Reagent Chemicals, Biological Stains, Chemical Indicators and Solutions will be sent to you upon request.

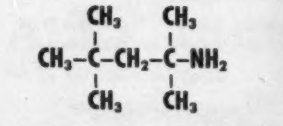
ORGANIC CHEMICALS FROM ROHM & HAAS

Produced in commercial quantities

OCTYLPHENOL

NONYLPHENOL

OCTYL PHENOXYETHANOLS

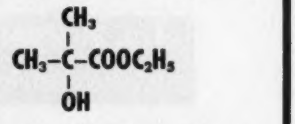


(n-1, 3 or 5)

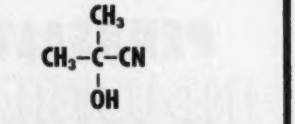
DIMETHYL FORMAMIDE

$HCON(CH_3)_2$

t-OCTYLAMINE



FATTY ALCOHOLS (DYTOL)



$CH_3(CH_2)nOH$

(n-9-15, 9-17, 13-17)

ETHYL HYDROXYISOBUTYRATE

ACETONE CYANOHYDRIN

ETHYLENE CYANOHYDRIN

$HO-CH_2-CH_2-CN$

GLYCOLONITRILE

$HO-CH_2-CN$

For samples, prices and literature on any of these chemicals, please write to Rohm & Haas Company, Dept. BG, Washington Square, Philadelphia 5, Pa.

Antioxidants

Flectol* H (Polymerized 1,2-dihydro-2,2,4-trimethylquinoline)
Santoflex* B (1,2-dihydro-2,2,4-trimethyl-6-phenylquinoline)
Santoflex BX (Constant composition blend of Santoflex B and N,N'-Diphenyl-para-phenylenediamine)
Santoflex 35 (Same composition as Santoflex BX but with higher N,N'-Diphenyl-para-phenylenediamine content)
Santowhite* MK (Reaction product of 6-tert-butyl-m-cresol and SCl_2)
Santowhite Crystals [Essentially: 4,4'-thiobis-(6-tert-butyl-m-cresol)]
Santowhite L [Thiobis (di-sec-amylphenol)]
Santoflex AW (6-ethoxyl-1,2-dihydro-2,2,4-trimethylquinoline)

Thiazole Accelerators

Santocure* (N-Cyclohexyl-2-benzothiazole-sulfenamide)
El-Sixty* [1,3-bis (2-benzothiazolylmercaptomethyl) urea]
Mertax (2-Mercaptobenzothiazole) (purified)
Thiotax (2-Mercaptobenzothiazole)
Thiofide* (Benzothiazyl disulfide)

Aldehyde Amine Accelerators

A-32 (Reaction product of butyraldehyde and butylidene aniline)
A-100 (Reaction product of butyraldehyde, acetaldehyde and aniline)

Guanidine Accelerators

DPG (Diphenylguanidine)
Guantal* (Diphenylguanidine phthalate)

Ultra Accelerators for Latex, Etc.

RZ-50 (50% solution of the N,N-dimethylcyclohexylamine salt of dibutyldithiocarbamic acid)
Pip Pip (Piperidinium 1-piperidinecarbodithioate)
Ethyl Thiurad* (Tetraethyl-thiuram-disulfide)
Mono Thiurad (Tetramethyl-thiuram-monosulfide)
Thiurad (Tetramethyl-thiuram-disulfide)
Methasan* (Zinc salt of dimethyl dithiocarbamic acid)
Ethasan* (Zinc salt of diethyl dithiocarbamic acid)
Butasan* (Zinc salt of dibutyl dithiocarbamic acid)

Special Materials

A-1 (Thiocarbanilide) Insoluble Sulfur 60
Santovar* A (2,5-di-tert-amylhydroquinone)
Santovar O (2,5-di-tert-butylhydroquinone)
Sulfasan*-R (4,4'-dithiodimorpholine)

Also Reodorants, Wetting Agents and Plasticizers
